NORTHAMPTON, MASS.—The Northampton Horticultural Society held its annual meeting on January 16. Officers were elected as follows: President, E. P. Copeland; vice-presidents, Edward J. Canning, Mrs. Mann, Mr. Allen; secretary, E. J. Canning; treasurer, James King; botanist to the society, W. F. Ganong, Ph. D.

KENNETT SQUARE, PA.—The greenhouse of C. S. Swayne was slightly injured by fire the morning of January 24. Considerable damage to plants, but damage to buildings was slight. Wm. Swayne also recently had a fire. His potting shed and office and 30 feet of one house and portion of another small house were destroyed. Considerable damage to growing stock. Loss \$500, covered by insurance.

A Carnation Discussion.
Following we give the substance of the discussion at the recent carnation meeting of the Chicago Florist Club:

GROWING HIGH GRADE BLOOMS.
MR. E. G. HILL (Richmond, Ind.):—It is a broad question and it is a question that involves a great many considerations. Of course we will all admit in the first place that we must have varieties that measure up in size and that have texture and stem in order to get high grade blooms, and happily for the florist and carnation specialist there are quite a number of varieties on the market that can be made to produce blooms that will bring large sized flowers and also a remunerative price for producing them. Another question is the progress of the evolution of the carnation: Some of the largest varieties are true and some are not true. In my estimation the variety Wm. Scott produces more good sized blooms perhaps than any other variety, and not only good sized blooms but in large quantities, and that is the type of carnation we are looking for. I think that unless a new variety measures up appreciably to the Scott type it ought not to be sent out. On the other hand I have seen a great many poor Scotts, washy flowers with streaks of white through them, but this is the result of indifferent culture or something lacking in the soil. It is very essential with a new variety that the root action of the plant is perfect in order to get a good sized flower. A great many florists make their mistake in the condition of the soil or in the conditions surrounding the varieties. I have noticed with Wm. Scott that when the root action is perfect the result is perfect flowers. In other cases where such action is not perfect the result is a white tinge in the flower and watery substance, which means that something is the matter with the root. When we find that a plant is not producing a normal crop of flowers some of us resort to top dressing, overfeeding, etc., which is indeed a very serious mistake. You err in overfeeding plants not producing a normal crop of blooms. I have noticed that the variety Bridesmaid, when grown in suitable soil, produces most magnificent flowers, while on the other hand plants not having suitable soil show inferior blooms, lack of color, etc. There is so much mystery in this soil question. Much study and experiment should be

given to it, because I believe the soil is necessary for proper root action and unless we get root action that will bring fine healthy growth we need not expect to have fine healthy flowers. Last spring I had my plants in clay loam. I followed Mr. Dorner's idea in order to do the thing up a little nicer and made my soil light; in this I made a serious mistake, because the varieties do not have the strength of stem nor texture as when grown in the style of last year, which was a stiff heavy loam.

MR. ALBERT HERR (Lancaster, Pa.)—I believe with Mr. Hill in the theory of stiff soil. I grow all varieties in this way and with good success.

MR. J. G. HANCOCK (Grand Haven, Mich.)—I think that Mr. Hill has hit the keynote on the soil question. There is one thing sure, we have got to have the right kind of soil in order to grow high grade blooms. I do not agree with Mr. Hill or Mr. Herr that it is necessary to have a heavy soil. Our soil has not a particle of clay in it, but all plant life requires certain elements to feed upon. The plant has to take substance from the soil in order to make good stem and flower, and we have also got to have varieties suited to our particular soil. As I am situated I can't go elsewhere to get heavy soil. You gentlemen that have heavy soil take varieties adapted to it. The idea is to experiment and see what you can do with your own advantages and to try in a measure to overcome your disadvantages by application of fertilizers, etc., and when you find out what you succeed in stick to it.

AUG. DRESEL (Chicago).—Do you not think, gentlemen, that by investing in these new varieties, in cultivating and overcultivating these things, we cultivate disease? I do not take any stock in the taking up of all the new varieties. I grow only four or five varieties, Daybreak, McGowan, Tidal Wave, Scott, Albertini and perhaps a few others. These are perfectly healthy and I never had rust on them.

THE CHAIRMAN.—The varieties Mr. Dresel names are none of them very old. He must have been investing in new varieties within a very few years.

ENTIRE GROWTH UNDER GLASS.
MR. HILL.—A number of my friends have tried growing under glass all summer. Mr. Lonsdale has grown carnations under glass for the past three years and he makes the claim that where plants are infested with disease, rust or bacteria they are in a large measure exempt from those troubles when grown under glass during the summer. I have tried it this summer. Tried it with one variety in particular, which is somewhat subject to rust, and there is a very minimum of rust on that variety, which does take it when grown out of doors. Under glass the result is a tougher skin on the leaf and stem

and as a result it resists the fungus. I am inclined to think that there is considerable advantage to be derived on that particular line. With me the results were very gratifying indeed. I find the growth is somewhat stronger and the plant is more vigorous under glass during the summer than plants lifted and taken in from outside. Mr. Lonsdale grew Buttercup to perfection that way. I was amazed to find them so strong, vigorous and healthy. Mr. Dorner tried growing his carnations on the benches last summer and was not satisfied, and he will not grow them so again. In growing under glass in the summertime there are one or two precautions that ought to be taken. When the summer heat comes, in order to keep your carnations growing, an abundance of water is given. The trouble is that in the application of this water you wash the substance out of the soil. Be careful not to impoverish your soil by application of water, as the plants will not have sufficient nutriment to make a strong healthy growth. We will find, however, that by mulching and using heavier soil the results will be very gratifying with many varieties when grown under glass during the summer time. I shall try this plan extensively another summer. I believe I am warranted in so doing by the success that we had at our place last summer.

MR. HERR.—I have tried and shall never try again. McGowan was flimsy and a failure. I got about one-third the blooms I get from lifted plants. (McGowan was the only variety I tried.) I do not think they get the substance they require and do not get sufficiently hardened up. I ventilated freely and was careful in watering; had solid beds and soil did not leach. My soil is sandy clay.

MR. HILL.—McGowan would be the very last variety to grow under glass for the reason that it seems to suffer in summer time even when grown out of doors. In order to succeed under glass it is necessary to take some variety which is a strong grower. If anybody had told the florists 25 years ago about growing roses under glass in the summer as is now done they would have laughed at him. It is very foolish to say it can't be done; it will be done. A friend told me the following recipe for rust: "One pound of dry arsenic to one barrel of water (40 gallons)." I tried the experiment with most gratifying results. I tried it on Uncle John which was badly infested and the result of syringing was absolutely clean plants, but it also seemed to follow the fungus right into the leaf and those leaves badly affected with rust were killed; the leaves became yellow and dried up.

MR. HARTSHORN (Argyle Park, Ill., foreman for J. C. Ure)—I planted, on the 25th of July, a whole bench of Helen Keller and about the 25th of August planted 100 plants of the same sort in another house, and the ones I planted first were much better than those planted later. The same was true with the variety Dean Hole. There is going to be a radical change in the building of greenhouses in order that more air can get to the plants. I would not plant a whole house of carnations under glass as my house runs north and south (I have ventilation on both sides) but the side benches would not get enough air; the middle benches I would plant very early. In the case of Dean Hole and Helen Keller they do much better when planted early but Scott and Daybreak grow quickly enough out of doors and lift well enough in the fall, and I therefore do not see any benefit to them by planting them early. I think

florists around Chicago leave their plants out of doors too long. I think that after this year the 15th of September I shall consider very late for planting carnations in the greenhouse and I will try to have all our plants in next year by the 15th of September.

MR. DRESEL.—Two years ago I took a house 100x10 for this purpose, planting 25 Buttercup, 25 McGowan, 50 Daybreaks and 25 Grace Wilder and the rest of the house Mrs. Fisher, and my experience is against what these gentlemen state. I do not think it is necessary to have more air. I made last year cuttings from Mrs. Fisher thinking I had good healthy plants and this fall they turn out to be sickly. Daybreak grew strong but gave very few flowers through the winter.

MR. E. BUETTNER (Chicago).—I do not believe I will ever try it. The trouble is that we cannot grow carnations at a profit, if we grow the plants under glass in summer. We must use the houses from April on for growing other plants. I do not believe carnations suffer very much when grown out of doors if care is used in the lifting. At our place we begin to take them in by the first of September.

MR. H. STOLLERY (Argyle Park, Ill.).—In regard to growing carnations inside in summer time we have tried Helen Keller and Dean Hole and are thoroughly satisfied and believe with Mr. Hill that that is the way to grow them. I would not say that we get more flowers, but we do get better and stronger stems and larger flowers and not nearly as much grass as when they are grown out of doors. Contrary to Mr. Hill we will try McGowan this way next summer.

DOES IT PAY TO GROW EXTRA HIGH-GRADE BLOOMS?

MR. W. N. RUDD (Chicago).—I can answer that question very easily—"yes." It does not admit of much discussion; it seems to me that it is self-evident. We all know that a good, well-grown carnation bloom will sell at some price at any time of the year, while for the poorer grade of flower there are long periods when they are a drug in the market. The question is whether you are willing to go in for quantity and get a low price part of the year and the rest of the time consign them to the rubbish heap, or go in for quality and always find a market for your flowers. We grow too much poor stuff and not enough good stuff. The poor stuff while it does not sell during the glut brings down the price of the good stuff. When the market is full of the poor stuff buyers do not want it, but they want to buy the good stuff on the same basis. In my time I have had good stuff and bad stuff and was never able to make very much on the poor stuff, and not very much on the good stuff.

MR. DRESEL.—You tell us we must grow good stuff; tell us how to grow it.

MR. RUDD.—All you have to do is to hunt up a man that knows all about it and if you can induce him to grow flowers for you, you can get good flowers if you will simply let him alone.

MR. HOPP (East Grand Rapids, Mich.).—I have not had very good experience in growing carnations under glass in summer. I used both raised and solid benches. Both gave about the same results. I planted out of flats about 10th of July. They were not in it with field-grown plants. Flowers were not bright, although plants made a good growth. I prefer the field-grown plants.

MR. HANCOCK.—Will it pay to grow high-grade carnations? It depends on what your market is. It is a question of

your surroundings and conditions. It is not a question you can settle in the abstract; you must adapt yourself to circumstances, just as you have to take varieties adapted to your soil. Grow your carnations according to where you dispose of them.

MR. HILL.—I believe that circumstances are such that florists will have to grow a better grade of carnations. When a person sees a fine-grown flower he wants it. In proof of this look at the eastern market. Grace Wilder and Silver Sprav sold within the last two weeks at 50 cents per thousand while high-grade flowers brought \$3, \$4 and \$6 per hundred. I am no prophet, but you might just as well make up your minds to grow high-grade carnations. If you don't you will get left. That is the handwriting on the wall and it is as clear as a-b-c.

(Mr. Rudd suggests that the commission men and retailers be heard from.)

MR. C. MCKELLER (Chicago).—All want the best grade. People seem willing to pay high-class prices. The majority of buyers will pay the very highest price for the best quality of goods.

W. J. SMYTH (Chicago).—I think if we had more high-class flowers we could sell more. We could get our customers in the habit of buying them and paying more for them. In regard to stock shipped in here, often when it comes from Michigan and other places and brought into our store it goes to sleep, and what will it do when in an overheated dwelling? I quite agree with Mr. McKeller that the demand is for high-grade blooms. It is only a matter of time when the poorer carnation is a thing of the past.

MR. GARLAND (Chicago).—We growers do not get much more for an extra good flower than we do for fair. I do not believe in growing poor truck, but you get about twice as many when you grow fair than when you grow extra.

MR. HANCOCK.—I do not believe in growing poor grade, but there is not enough distinction made between fair and extra good stock.

MR. E. WIENHOEBER (Chicago).—The people prefer high grade. Customers want the best quality. The man who grows the best stock will sell it quicker than the one who grows fair only. Whoever has the best stock will sell it and the man who has not the best will not. It is certainly true that good stock will sell 20 times in preference. I do not believe that any grower around Chicago would be wise in growing nothing but fancy stock. He must grow good and fancy. The disbudded realized 1 cent more than the others.

MR. RUDD.—Mr. Bentley asks my experience as to proportion between prices of Rose Queen and Daybreak. I do not think there has been a bloom of Rose Queen lost. Everything has been sold out at an advance of at least 25% over the best Daybreaks. When I speak of growing high-grade carnations I do not wish to be understood as necessarily advocating the fancy varieties, but I mean good high grade flowers—good stock, good size, good stem. I think the fancy varieties will also pay if grown well.

P. J. HAUSWIRTH (Chicago).—I believe the demand for high grade stock is growing every day. The trouble with most of the commission men here is they do not make enough difference between the high grade and low grade. The people are being educated up to the best.

After the above was in type we received a visit from Mr. C. H. Allen, treasurer of the American Carnation Society, and

SUMMER HOUSE OF ARAUCARIAS AT THE ESTABLISHMENT OF MR. L. DELARUYE CARDON, GHENT, BELGIUM.
THROUGH AMERICAN EYES.

asking his opinion of the discussion as to the profit in growing high grade flowers, he said that not only did high grade flowers sell for a better price but that a plant could be made to produce just as many blooms of a high grade as of a low grade, and that the only extra expense was in the additional fertilizer used, which is not great. The plant simply exhausts the soil faster. He finds that producing high grade flowers does not necessitate any extra labor. He has six houses, of which four are 16x100 and two 11x100, and has but one regular employee to care for same in addition to the night fireman. He does the cutting of the blooms himself. As to disbudding, in his opinion the grower who does not disbud is hopelessly left in the rear.

CARNATIONS EXHIBITED AT THE MEETING.

The display of carnations was most excellent. Prominent on the tables was the new pink variety Della Fox, certainly a charming flower, which carried well through the evening. A large pot plant of this variety showed an excellent habit and attracted much attention. These were shown by Myers & Samtman, Wyndmoor, Chestnut Hill, Philadelphia, who also displayed a vase of Annie H. Lonsdale, a promising white.

The largest number of varieties was shown by H. Weber & Sons, Oakland, Md. All were exceedingly well grown and would have proven prize winners at any exhibition. The varieties were Portia, Storm King, Albertini, Peachblow, Alaska, Uncle John (Mr. Weber says he has no trouble with rust on this variety), Wm. Scott, Dean Hole, Lizzie Gilbert,

Richmond, Hector, Meteor, Bouton d'Or and Mrs. Reynolds.

E. G. Hill & Co., Richmond, Ind., showed their new variety Jubilee, a brilliant scarlet that is hard to beat for color; Flora Hill, a promising new white; Mrs. McBurney, light pink; Triumph, pink; Armazinda, white striped pink, and Emma Thompson, pink.

Fred Dörner & Son, Lafayette, Ind., showed their new variety Mrs. Geo. M. Bradt, a striking flower, white heavily splashed with red; also Meteor, Uncle John, Bridesmaid, Albertini, Dazzler (scarlet), and Mrs. C. H. Duhme (pink), all exceedingly well grown flowers.

Geo. Hancock & Son, Grand Haven, Mich., showed flowers and a specimen plant of their new white variety Ivory. Also Goldfinch, seedling No. 19, light red; seedling No. 42, white shaded pink, and vase of other seedlings.

The large vase of Storm King, from the Cottage Gardens, Queens, N. Y., contained magnificent flowers on 20-inch stems. As grown by Mr. Ward this white is hard to beat.

From John Breitmeyer & Sons, Detroit, Mich., came Mayor Pingree, a light yellow ground with carmine stripes. It is a handsome flower with the ideal stem and proved an excellent keeper.

Morello was a new rich scarlet exhibited by Hopp & Lemke, East Grand Rapids, Mich. The color is certainly fine, flower large and stem good. A plant on exhibition showed a good habit.

From J. N. May, Summit, N. J., came blooms of his new varieties Maud Dean, pink, shaded deeper in center; Lena Sil-

ing, pink, Lily Dean, white and red; all beautiful flowers and promising sorts.

W. R. Schelmire, Avondale Pa., showed Kitty Clover, yellow, and Eldorado, yellow, both in good form.

Emma Wocher was a promising new pink variety shown by R. Witterstaetter, Sedamsville, Cincinnati, O., who also showed a number of good unnamed seedlings.

M. A. Hunt, pink and white, and Peachblow, pink, were shown by Estate of M. A. Hunt, Terre Haute, Ind.

Wm. Swayne, Kennett Square, Pa., showed some fine blooms of Thos. Cartledge, deep pink.

From F. H. DeWitt & Co., Wooster, O., came Twilight, yellow ground with heavy red stripes, and a deep pink seedling.

John Milne & Son, Fairbury, Ill., showed Rosa Peiser, pink, and sundry seedlings.

The exhibit by W. N. Rudd, Mt. Greenwood, Ill., included finely grown blooms of Rose Queen, Daybreak, Wm. Scott, Eldorado, Minnie Cook and Alaska.

Stollery Bros., Argyle Park, Ill., showed a vase of fine blooms of Dean Hole.

J. P. Tonner, Mont Clare, Ill., showed a vase of Van Leeuwen, light red.

Additional Premium.

The American Carnation Society will offer in addition to the regular premiums published a few weeks ago a preliminary certificate to seedlings bloomed two years, if deemed worthy of such by the judges.

Not less than twelve blooms to be shown and for which there will be an entry fee of one dollar charged.

This certificate is not to be confounded with the regular one offered in the premium list and will not be given for any three year old seedling.

FRED DORNER, President.

ALBERT M. HERR, Secretary.

Albertini Under Glass in Summer.

Has anyone grown carnation Albertini in the house all summer, and what was the result?

GREEN GROWER.

Pennsylvania.

I have grown Albertini in the house all summer, but have not gained any satisfactory results. The house was provided with top and side ventilation. The plants were from 4-inch pots, good and strong, and were planted one foot apart each way, the first week in June. I expected great things; for one, they would cover the ground by fall and give me an abundance of early blooms, but the chickens were not hatched yet. They required most daily watering. By September the plants were not as large as those grown in the field, and I planted a good many of the field grown in between in the rows to fill up a little better, for it looked as if there was so much waste space. Quite a number I lost with stem rot, otherwise the plants had a healthy appearance, only made no headway in growth. True, they bloomed somewhat earlier than those planted in between from the field, but not enough to compensate for the extra work, and at the end of the season the field grown plants proved by far the most profitable. In the same house we had Scott and Daybreak, equally as strong plants when planted, and at the same time with the same results. This in answer to the inquiry, and I will couple my notes on here and take the same subject for my theme.

I have come to the conclusion that in a temperature of 80° and over for day and night for any length of time carnations will cease to grow, just the same as when near the freezing point, say below 40°. With 80° to 90° in the shade the soil on raised benches will heat through to the same degree, and owing to being enclosed, being in the house, even with the very best of ventilation, will not have sufficient time during the short summer nights to cool off sufficiently to give the plants a breathing spell and encourage root action. They simply cease growing, and it kept too wet will rot. Extremes will meet, too hot and too cold have the same effect. The cooling influence the field grown plants receive is shut off from the bench in the house. In the field the roots descend to the cooler strata of soil. On the bench the hot atmosphere is all round them. If shaded the growth they probably will make is drawn and spindling; they lack the foundation of field grown plants.

The objection may be made that when plants that have bloomed all winter and spring and keep on blooming through summer we ought to be able to grow the young plants to maturity under the same condition, to avoid the retarding transfer from field to house. We all know that all plants have to pass through certain stages of their growth to arrive at the point of maturity, blooming reproduction. Our *Dianthus caryophyllus* makes an exception to some extent, but not wholly. One get reminded of this fact when observing a patch of seedlings during their stages of growth, and finds so many different types. Some will bloom when comparatively small and only three months old, others have to attain a

larger size, and take longer time to arrive at this point, and still others will not bloom until the next season. The early and ever-blooming quality is the result of culture, but they possess their original perennial propensity also. The late, and more so those that will not bloom until another season, are the original, the perennial type, the cropper as we call them. These different types are found from seed coming from one and the same seed pod, from parents of an alike pronounced type. So regarding the old plants blooming through summer under glass in a high temperature, and the failure of growing the young plants to maturity under the same conditions, I base my opinion on these ties which hold and bind our cultured varieties to their primitive originality. The old plants on the bench will keep on blooming in a high temperature, for their structure is completed. They will not need to grow materially larger to bloom, one is inclined to think they grow smaller, they spend all their strength in pushing out some more flowers. If cut back to three or four inches they will make a feeble effort for a new growth, but seldom succeed. I have tried but never had any success with plants from the bench trimmed back and planted in the field for summer blooming. The cropper and other *Dianthus* types seldom bloom after their spring blooming, rest through summer and renew growing when cooler weather begins. The root action of a plant completed in its structure is quite different from the one building up the same. To build up the structure the roots run deeper; to bloom they run more to the surface. Shading will be beneficial to the old plants, detrimental to the young. This to my opinion is the difference of an old plant blooming under glass and the poor success we have in growing young plants to maturity under the same condition in our high summer temperature. One variety may not be as pronounced as another in their inclination to the original form, but they are all under that influence more or less.

This is my opinion based on my experience regarding the subject in this section of the country. We have very hot summers, any attempts to grow may be interrupted by hot spells, making the plants completely inactive. The young fibrous roots in quest of nourishment, building material, become weak, die and the work has to begin over again at the next favorable chance, with same interruptions to follow.

Quite different it may be with solid beds, where the roots have a chance to run deeper to the cooler soil, especially if the house is so constructed that the glass can be removed. But will that supposed gain outweigh the advantage of a raised bench in winter? for I consider a raised bench much better than a solid bed. I am very much interested to hear of such experiments. Again, it may be quite different in cooler climates and may prove there the proper thing to do. For my part I am satisfied it will not do with us, and I much rather take the chances on the field grown plants and depend on my care for a successful transfer.

FRED DORNER.

Diseased Daybreak.

The disease shown on specimens sent is completely covering plants of Daybreak, while McGowan alongside is entirely free from it. Can you suggest any way to treat my plants to prevent the spread of this trouble?

J. I. A.
Detroit.

These two leaves show genuine rust. There has been so much said about rust, and I am sorry to say there is no absolute remedy known yet. I refer J. I. A. to my notes on this disease, in No. 390 of this paper.

FRED DORNER.

Twisted Carnation Leaves.

The accompanying carnations have a twisted appearance which seems to have been caused in the field, as none of it appears on growth made after being housed. Is it a disease, or the work of some insect?

E. D. E.

St. Joseph, Mo.

E. D. E. is right in his surmise; it is the effect of a stunted field growth. There is no disease or any insect trouble on the specimens shown; the impoverished condition causes the twisting of the leaves and short or hardly any flower stems, but plants in this condition are always more susceptible to disease, especially bacteria.

FRED DORNER.

In the accompanying box I send you some diseased rose stems. This disease being unknown to me you would oblige me greatly by giving me some information as to its name, probable cause and cure. The trouble always begins at the base of the shoots and gradually works upwards along the stem. In some cases the diseased stem appears stunted, forming small and imperfect foliage and flowers. Otherwise the roses are in good healthy condition and doing very well.

Ohio.

A. S.

An examination of the stems and foliage received showed the disease to be anthracnose; they were badly affected, and should receive treatment at once. This disease has been described, and a remedy suggested more than once in the columns of this paper, but as A. S. may not have paid much attention to the articles in question I will very briefly outline what has been recommended previously as a cure for anthracnose. The disease as far as I know has no connection whatever with the root or the internal structure of the plant, but attacks altogether from the outside, in the same way as mildew or black spot. I have not the slightest idea what causes lead to its origin, I do know, however that it can and does frequently attack apparently healthy plants, and before we are aware of its presence may have spread itself over a whole house. The ammonia solution of carbonate of copper I have found an excellent fungicide for this pest. In making it we mix together 3 ounces of copper and one quart of ammonia, which will be sufficient for 24 gallons of water. The plants should be syringed thoroughly once a week until the trouble disappears. All dead tips should be cut off and burned and the fallen leaves should be cleaned off frequently; if this treatment is followed, together with extra care in watering, ventilating, etc., the plants can be encouraged to grow out of it. ROBT. SIMPSON.

A BAMBOO SUMMER ARAUCARIA HOUSE 1200 FEET LONG; DE SMET BROS., GHENT, BELGIUM.
THROUGH AMERICAN EYES.

New Tea-Polyantha Rose Mosella.

This rose, according to reports in European gardening papers, is spoken of as the best novelty of last year's introductions. It is not like the Mrs. Pierpont Morgan or the Belle Siebrecht, a rose especially adapted for forcing purposes, but is a bedder such as the Clothilde Soupert which has become such a universal favorite.

Mosella originates from a crossing of a seedling of Mignonette X Madam Falcot with Shirley Hibberd, all roses highly esteemed for their freeblossoming qualities. The growth is dwarf and bushy and the sweet scented flowers which appear mostly in clusters of three to five are somewhat larger and in shape like the Clothilde Soupert, their color being a soft deep golden yellow shading to almost white on the edges of the petals, a half open flower resembling somewhat the well known Perle des Jardins. It is said that despite want of water and in the tropical heat of last year Mosella flowered freely and proved in every respect its adaptability as an all round bedding rose. It originated with Messrs. Lambert & Reiter, the introducers of Kaiserin Augusta Victoria and other varieties of prime merit. J. L. S.

Beauty Coming Blind.

"Manchester" says he has American Beauties growing in solid beds; same are making very long shoots, but wants to know why they all come blind. To answer the query intelligently it would be necessary to know what his methods of cultivation are, how warm he keeps the

house he grows them in, what style of house, etc. If I could solve the problem as to why American Beauties sometimes run to blind wood rather than flowers I should be considered fortunate indeed. It is a question that has puzzled some of the very best growers of this popular variety, and will doubtless continue to do so. One season it will make amazing growth with a large percentage of blind shoots, while perhaps the following year in the same house and under the same treatment we get plenty of bloom but little growth. Too much heat has a tendency to cause blindness, excessive feeding may bring about the same result. The tendency to blindness is more noticeable where grown in solid beds than if grown on benches, the frequent drying out of the soil on the bench helps to ripen the wood and induce the formation of buds. If the long blind shoots are bent down and trained along the surface of the soil for a distance, then the end tied up perpendicularly to a stake the flow of sap will be arrested, and if the shoot itself does not bloom, which is quite probable, it will throw up others from the base, less strong, which are pretty certain to produce flowers. If the soil can be kept on the dry side for about two weeks after the tying down process it will help very materially to bring about the desired result. ROBT. SIMPSON.

Through American Eyes.

ARAUCARIAS.

One of the principal plants handled by the European growers is the araucaria. It is to be seen everywhere, and in Ghent some growers devote almost their entire places to its culture. The DeSmet Bros.

are probably the largest growers and were among the first if not the original men to take up the cultivation of this plant. They propagate it almost entirely from cuttings, which are taken from stock plants kept for the purpose, as when once cuttings are taken from them they are spoiled for any other purpose. These stock plants are kept in pots outside on the shady side of hedges or in frames partially protected from the sun. Some growers had plants in the full sunlight and all seemed to keep them in rather small pots.

The cuttings were taken off from August to December and were generally two rows of leaves long, there being about an inch of stem left below the bottom row. The lower row of leaves is tied up to the stem with a piece of raffia and the cuttings are then placed in boxes of sand in the greenhouse and covered with glass. When well calloused they are potted and soon root, requiring generally from 10 to 12 weeks' time. About 80% is considered a good strike.

When the plants are about a year old and it is seen they will not make shapely stock they are set aside and grafted, mostly with compacta, which latter variety does not root well.

In summer most of the stock is grown outside under slat houses. These are made in various ways, some being very ordinary with a plain straight roof and a hedge border, while others were quite elaborate, having an iron framework and neat slat or bamboo covering reaching on the sides to the ground.

The accompanying illustrations will perhaps give an idea of the extent of some

of the houses. Both of these structures were filled with beautiful stock, nearly every plant perfect and having the added charm to the growers of being nearly all sold. Stock in from 6 to 8-inch pots, with the preference for the smaller size, was the most popular. Any quite large plants were generally offered low, as the demand was very limited for large sizes, even the European trade appearing not to want them. K.

Compost for Violet Bed.

J. S. sends the following: "I want to make a compost heap for my cold beds for violets, to be planted out in the spring. Will this proportion be a good mixture—1 load of stable manure, 1 load of turf, 1 barrel chicken manure? Will the chicken manure hurt the plants or can you suggest anything better?"

I think I can suggest something much better than the above, but it is presuming a good deal to say that; anybody knows just what soil should be for violets. In my own experience I have grown violets very successfully in a certain soil, and they were a total failure next year in the same soil. I have heard violet growers condemn a soil because it was too heavy, and in a few days met a man who said violets should have a stiff soil and be well firmed, as you would for roses. Violets in California grow luxuriantly in almost a clear sand, but violets in Great Britain are found growing under the shade of trees and in the woods, where there would be a deposit of decayed leaves, so it seems soil has little to do with the success or failure of violets. Leave out the chicken manure altogether, save that strong article for your Brussels sprouts. If growing violets in a cold frame, as the subscriber intends to, for he is in Virginia, I should feel perfectly safe with the following: Three loads of well decomposed sods and one load of thoroughly rotten stable manure; have this mixture turned over several times before planting the violets, and if you don't get violets it won't be the fault of the soil.

WM. SCOTT.

Butted Glass—Violets in Frames.

I have seen several articles in the *FLORIST* in regard to butted glass without any putty being used. How would this do for cold frame sash for violets?

How deep should violet frames be at back and front, and how high should the thermometer get on a clear day before the sash should be opened wide?

J. W. T.

J. W. T. will find that butted glass will answer admirably for cold frame sashes. Butted glass has a great many warm advocates.

Frames 2 feet 6 inches at back and 1 foot 6 inches in front will do very nicely.

Thermometer outside should reach 45° before lifting sash off; 50° is a good temperature for cold frames with air on. Close attention will be required from now on as the sun is getting stronger and the air is apt to be very cold.

GEORGE SALTFOED.

Distance to Plant.

B. J. P. sends the following: "I would like some of my learned brothers to advise me on the correct distance apart each way to plant cannas, coleus, geraniums and alternantheras." This will depend somewhat on the size of the plant you have and whether your customers can

afford to be extravagant and pay for immediate effect. I will give the distance at which if the plants are of fair size and vigorous they will not look "scrimpy" when first bedded out and will have room enough to grow and do well the whole season. Cannas, all the Crozy type, 18 inches each way; the old strong growing foliage sorts 2 feet. Coleus, moderate growers, 9 inches each way; strong growers, 12 inches. Geraniums, bronze, silver leaf, etc., 10 inches; strong flowering sorts 12 inches. Alternantheras, according to size of plant, 6 to 8 inches.

WM. SCOTT.

Pelargoniums Flowering.

From Evansville, Ind., comes this question: "Will pelargoniums which are rooted this month—January—bloom this spring? Oblige with an early answer."

Why certainly they will; you can't stop them. If they are strong healthy cuttings and grow as they should when potted you can pinch the top out of them and they will branch out and make a bushy plant, that when shifted into a 4½ or 5-inch pot will be sure to flower in May. Give them a light airy place with a cool night temperature, and keep free from aphids, and you are bound to have flowers.

WM. SCOTT.

New York.

Cut flower trade in the city has been generally brisk for several days, and the outlook is very encouraging for the next few weeks. The quality of much of the stock coming in has been very inferior, however, and falls far short of filling the requirements of the buyers, who are more fastidious this season than ever before. Bridesmaid roses are off color and in fact all varieties of roses are soft and flabby, a result which may be attributed to several days of warm rainy weather and which a few bright cold days will doubtless overcome. American Beauty roses of good quality are decidedly scarce and there is every prospect that they will so continue for some time. Carnations sell better than they did last week, although there seems to be a good crop coming in from all sources. White seems to be the color most eagerly sought. Bulbous stock is generally poor. Harrisii lilies are soft and tulips are almost invariably of the lowest grade. Lily of the valley is also unsatisfactory in quality. Why will growers persist in tying two or three unsalable spikes in the middle of each bunch of twenty-five valley? They should know that it is discovered in every instance and that the price realized for the balance is below what it would be if the rubbish were left out entirely. Violets suffer from the same misguided practice. Two or three mottled or decayed violets will lower the grade of the bunch in which they appear, by fifty per cent.

Already the talk of extensive greenhouse building as soon as the season opens, is in the air. Rose houses are to go up in unprecedented numbers it would seem. Many of the older establishments are planning extensive additions and their owners are evidently not disheartened or dismayed by anything in the present season's record.

The trustees of the Florists' Club have appointed Messrs. P. O'Mara, 35 Cortlandt street, New York, W. A. Manda, South Orange, N. J. and A. F. Burns, Woodside, N. Y., a reception committee on behalf of the club to extend all courtesies to visiting florists at the time of the Carnation Society's meeting. These gen-

tlemen will, upon request, secure hotel accommodations for visitors and they particularly desire that delegations coming to the meeting shall inform them of the time of expected arrival of trains so that they may make arrangements to meet them at the station.

The New York Florists' Club will give a banquet in honor of the American Carnation Society on the evening of February 20. In order that full provision may be made for the number of guests attending it is imperative that the secretary should know one week in advance the size of the delegations from all points, and secretaries of the clubs which will be represented are particularly requested to extend their aid by ascertaining and communicating to Secretary John Young, 53 West 30th street, New York, the number of visitors expected to attend from their respective jurisdictions.

Frank L. Moore, the inventor of the ingenious Workeasy buckle now generally used on flower box straps, has applied for a patent on an improvement on same whereby the wear and tear on the strap will be greatly lessened.

Warendorff has opened a branch store on Sixth avenue, between 14th and 15th streets.

L. M. Noe, manager of the New York Cut Flower Co. has been ill and confined to his home for a week.

Mrs George Darsley died at her home in Jersey City on Thursday January 23.

Visiting New York: Thos. F. Galvin and N. F. McCarthy of Boston.

Boston.

On Saturday, January 25, Prof. Geo. L. Goodale of Harvard Botanic Garden delivered a most entertaining and instructive lecture before the Massachusetts Horticultural Society upon the vegetation of the tropics, dwelling particularly upon those species that have become familiar to us as "stove plants," such as aroids, nepenthes, orchids, musas and palms. The lecturer presented a series of beautiful stereopticon views in Singapore, Persia and the trackless jungles of Ceylon, showing the wonderful development of these plants under favorable climatic conditions. Especially interesting and beautiful were the avenues of ficuses with their buttressed trunks and the graceful towering clumps of bamboos. The address was mainly descriptive of the different views as they were thrown successively on the canvas.

During the latter part of last week the cut flower market took one of those sudden and almost inexplicable turns which some years ago were of frequent occurrence in midwinter, but which are now rarely experienced. The supply was all at once cut short and almost before they realized it buyers were hustling about from one wholesale establishment to another in quest of stock of which but a few hours before there was apparently an abundance for everybody. Carnations were particularly affected and prices were doubled up in short order. White varieties were most in demand, the poorest culls selling quickly at two dollars per hundred. The stringency moderated somewhat after a few days duration, but its effect is still felt, and as the usual brisk demand experienced at the height of the fashionable season is now on conditions continue favorable for the growers' interests, leaving the street fakirs as the only parties with any cause for dissatisfaction.

The committee of the Massachusetts

Horticultural Society appointed to consider the question of a new site, adopted at a meeting on January 22 a vote recommending to the society that they give said committee power to offer the property now occupied by the society for sale, provided that they can obtain a satisfactory price, and the matter will be brought before the society for consideration at the meeting on Saturday, February 1.

The annual supper of the Gardeners' and Florists' Club took place on the evening of Thursday, January 30. A number of invited guests were present and the usual good time was enjoyed by the large company in attendance.

Lawrence Cotter, president of the Gardeners' and Florists' Club of Boston, was married on Tuesday evening, January 28, the occasion being, in Mr. Cotter's opinion, a good and sufficient reason for his absence from the supper on Thursday. Under the circumstances he has unanimous consent.

There are said to be several aspirants for the position of City Forester, now held by Mr. Wm. Doogue.

Mr. Robert Farquhar will address the Gardeners' and Florists' Club on Tuesday evening, February 4.

Buffalo.

Fair and moderate weather for the past week will be a suitable description for the business as well, nothing startling. Violets are in good demand and bring \$2 per hundred, carnations go well and 50 cents per dozen is the ruling price unless it be Albertini, Keller or Bridesmaid. Good Bride and Bridesmaid roses bring \$2, but with carnations such a prime favorite we seem to get along without so many roses.

A visit to the South Park a few days ago was enjoyable, for Botanical Director Cowell has several things of interest to show. A small light and cool house has a great variety of carnations, all in fine order and what is encouraging is that although he bought several varieties badly infested with rust last fall, they are now perfectly free of it, thanks to a regular treatment of the liquid Bordeaux. The flowers of all varieties were more than ordinarily fine, but among newer ones none pleased me better than the abused Bride of Earlecourt. He has flowers of it as good as those shown in Toronto last winter, and that is saying a good deal, a most robust plant with flowers and stem for superior to any which I have yet seen. The Professor can also be very proud of his cinerarias; I measured a dozen or two of the finest. They are in 9-inch pots 3 feet in diameter, not over 15 inches from top of pot, only a small margin of leaves to be seen extending beyond the flowers. They are just the shape of a small umbrella. I don't say this will do for a florist to copy, but it shows what good and careful cultivation, especially watering will do. All his florist flowers and botanical collection are looking well.

After a long interval the writer in company with Mr. Wise of East Aurora, visited the veteran W. J. Palmer and found him roaming round his big establishment in usual robust health. Meteors, Bridesmaids, and Brides looked in several big houses as good as it's likely they are anywhere in this broad land. Carnations are a big feature at this place, 5 or 6 houses being filled with Daybreak alone. While some of the Daybreak houses were merely good but quite good, others were the finest specimens of this standard variety the writer has ever seen. Flowers 4 inches across were more the rule than the exception. Helen Keller is there in

fine form, no shrivelled-up flowers, and of great size. Meteor also shows up grand. Mr. Palmer says Albertini is a fine flower, but he is sure it ought to bring \$10 per hundred to pay. Mr. Wise and Mr. Palmer both tie or support their carnations in the same way. In fact the method originated in East Aurora. It seems to me about perfect in every way, and will be fully ventilated at the carnation convention in New York. Mr. Palmer went in for one hundred thousand LaReine tulips, since Christmas he could cut you fifteen thousand any day. He got them to assume that charming pink tint. In fact he made a ten strike with them.

W. S.

St. Louis.

Good roses are selling well, and the demand bids fair to continue brisk until Lent sets in, or until the production is considerably increased. This condition of the rose market is undoubtedly owing more to the smallness of the cut generally than any special increase in consumption. The first two days of this week were very brisk, all the commission men saying that they soon sold out all their stuff. Flowers are scarce, and particularly in first-class grades. Good Beauties are very scarce and go for \$3 to \$5 per dozen. Brides are scarce, that is good ones, and in demand at \$5 to \$8 a hundred. Perles of good quality are \$3 to \$4, but good Perles are comparatively scarce. Carnations are not plentiful, and are going well. Daybreaks and Scotts sell at \$2 to \$2.50, with some extra blooms at \$3. Scarletts are not plentiful, and in great demand. Bulbous stock is still large in supply. Good valley brings \$4. Romans go at \$2 to \$4; daffodils (Von Son) are coming in now, and bring \$4. Tulips and Dutch hyacinths are in, but most of the tulips are too short stemmed. Callas and Harrisii are selling well. Good large flowers bring \$12. Violets are in fair demand and sell at 25 cents for single and double at \$1.50. Smilax seems to be going better that it did, and is a little scarce. Complaints of dull business are general, both shipping and local trade suffering alike.

Fred Dörner & Son of Lafayette, Ind., are sending some very fine carnations to this city.

The exhibition committee is hard at work on the preliminary list, and expects to have it out by February 15 for distribution. Mr. F. C. Weber will look after the west end florists, J. J. Beneke the down town florists, Emil Schray the south end, and R. F. Tesson and H. Young the suburban men.

The decorations of the high school graduating exercises on January 25 at the Music Hall Exposition Building were the most elaborate ever seen. The entire stage was decked with palms, etc., the scenery being decorated with wild smilax and cedar with motto "Step by step," made of red immortelles and tied with satin ribbon of same shade. The class emblem was a large wreath of holly with letters H. S., '96, made of yellow immortelles suspended in the midst of green moss, palms, and smilax. The class, numbering 75, carried huge bunches of holly tied with class colors of ribbons. This was the work of the Ayers Floral Co., and was admired by everyone.

The Bowling Club on Monday night rolled three games; the Japs were on top again. John W. Kunz was high man, he rolling 605 in three games, and his single score was 237. Mr. F. C. Weber was second with 562, and E. Schray was third

with 558. C. A. Kuehn was sick and unable to roll, and missed his first games; this ended the series of 12 games. C. Beyer wins both medals, his total for 12 games being 2,460, average 205, and his highest single score being 289. This makes the clover leaf medal his property. Next Monday a new style of game will be rolled, and it will be to the interest of every member to be present. J. J. B.

Toronto.

The weather, which has been simply execrable the last few days, has been almost the sole topic of conversation. Superintendents of parks and gardeners are bemoaning the loss or spoliation of many valuable trees from the loads of ice which gathered on them, and which they were unable to carry. It is heart-breaking to see some of them. From many reports Toronto seems to have been the center of the storm. Telephone, telegraph, fire alarm, police, trolley car wires were completely demoralized, the posts in many cases being snapped off. We are recovering, however.

The regular monthly meeting of the Gardeners' and Florists' Association on Tuesday last was very well attended and lots of business was done. The new president, Mr. George Reeves, read an inaugural address which was both retrospective and prospective, it pointed out where in some respects horticulture had retrograded rather than advanced during the last twenty-five years, especially in the reading and discussion of essays and in the circulation of local horticultural literature. Suggestions were made towards advance on these lines, which Mr. Reeves intends to push during his term of office. A lively year may be expected without any of the bad feeling of last year.

Some very fine cyclamen were shown by Mr. Watkins from the Horticultural Gardens, and grown by Mr. E. Collins from seed brought by him from England last February. Mr. Collins will give a paper at the next meeting, setting forth his mode of cyclamen culture.

I hear that \$20,000 will be spent by the parks and gardens committee on the Rosedale ravine drive this year. This drive will be a most beautiful addition to the already fine system of parks in Toronto.

Mr. R. Gore, formerly a florist, but who has lately been assistant gardener to Sir Casimir Gzowski, is taking a trip to the old country.

Dunlop reports business good in spite of bad weather. There is a large demand for violets. The Cawthra-Renton wedding called for a great number of pink and white roses on Wednesday, and Mrs. W. G. Gooderham's ball used a large quantity of flowers for decoration on Thursday. A big dinner at the Board of Trade kept things from being dull on Friday. The supply of tulips, daffodils, valley, hyacinths and carnations is large, but the demand has kept pace with it. Roses are very scarce, not sufficient to supply the demand. E.

Baltimore.

There does not seem to be much change in the condition of the cut flower market.

A new departure in decorating has brought out a growl or two. A certain hall being elaborately decorated for a ball was to be used for another event on the night following. The parties in charge of the second affair countermanded their order for decorations and revelled in the beauty of the decorating already done.

Rumor says that one or two subsequent assemblages were correspondingly prudent and economical. Probably we will have the bon ton combining several high social events and putting up one grand decoration to be used by each in turn, by lot or according to amounts contributed.

The shortcomings of the past season does not seem to have abated the zeal with which preparations are being made for Easter and spring sales, and the indications are that an enormous stock will be on hand for both. MACK.

Pittsburg.

It was the intention to hold the meeting of the Florists Club on Tuesday night, 28th inst., at our former place, Maginn's Hall in Allegheny City, but as it was not available for that evening we met through the courtesy of W. C. Beckert at his storeroom, 19 Federal street. It being election night a large number attended. The official reports of the secretary and treasurer showed the club to be at present in a very flourishing condition, and a very gratifying increase in membership in 1895. Owing to the absence of our vice-president Mr. E. C. Reineman filled the position as chairman pro tem and read a very able paper on the progress of the club, its future welfare, advising the members to be more alive to the beneficial results to be gained by a more intimate acquaintance with each other, evince a warmer fraternal feeling so that all will work together more in harmony, and do away with the so-called secret methods of culture, thus producing benefits, that will in the end be very great, both in the enlargement of ideas, as well as the pocket. Mr. Reineman also made a feeling and beautiful announcement of the death of our late president A. W. Bennett, after which a committee composed of Samuel McClements, A. Filson Dalzell and George W. Burke, were appointed to prepare resolutions expressive of the sentiments of the club in the great loss it has sustained, they to report at the next meeting.

The club then proceeded to elect officers for the ensuing year; after a spirited contest for some of the places, the result was announced by the tellers, Mr. S. McClements and W. H. Elverson as follows: President, E. C. Reineman, 307 Lowry street, Allegheny City; vice-president, George W. Burke; treasurer, John Bader; secretary, O. C. Oehmler; assistant secretary, E. C. Ludwig. Executive committee: Fred Burki, George Oesterle, P. S. Randolph.

It is expected that the new officials will devise ways and means to increase interest in the meetings, make them attractive and secure an attendance that will demonstrate that the club is a good affair to stick to and work for. A great deal of interest was manifested in a fine bunch of the new carnation Della Fox displayed by E. C. Ludwig, the verdict was that it is a good one. At a late hour the meeting adjourned to meet on February 11.

The trade situation seems to be improving slightly. All report a good demand for funeral work and considerable decorations. Messrs. A. M. & J. B. Murdoch had one of the most elaborate wedding decorations, ball at Duquesne Club, and a large reception in Allegheny all coming on the same day, these with some extra funeral pieces kept all hands bustling.

A visit to the Phipps conservatories show that everything there is moving along smoothly, but all miss the presence of the late superintendent. Later on the

cinerarias will present a beautiful appearance; they are just beginning to flower now. The other flowers are looking well and the preparations already made will give a grand Easter show. There is one plant of the *Phalaenopsis Schilleriana* (moth orchid) that is attracting a great deal of admiration, it has a spray of beautiful pink blooms 112 in number on it, and Mr. Joe Spring, the foreman, expects that with another season's growth it will do much better.

W. F. Lauch is reported sick with an attack of la grippe. He was missed at the meeting on Tuesday as he is one of the most faithful in attending; all wished for his speedy recovery. REGIA.

Philadelphia.

There has been quite an improvement in the business of the past few days; the weather has been cold and wintry, and this has kept the supply down. The extra demand has cleaned up the stock every day, so that sleepy carnations and fat roses are the exception. There does not seem to be an overstock of anything except perhaps it might be Romans. Good Beauties and Brunners are in demand; the best Beauties, 30 to 36 inches, bring \$5 to \$6 per dozen; 18 to 24 inches \$3 to \$4, and 12 to 15 inches \$1.50 to \$2. Brunners, the best, and there are very few about, sell for \$5 per dozen; smaller stock down to \$3. None of the growers have had a profitable crop of this rose as yet this season. Mr. Butler, who had such success with a late house last year, has an early one in, but says it will hardly pay for the coal. Messrs. Harry Weiss, Myers & Samtman, J. Heacock and John Burton are sending in some very choice Bridesmaids. There is considerable discussion among the boys who carry them as to who has the best, and a prize of \$5 has been offered for one dozen flowers to be on trial before the February meeting of the Florists' Club, February 4, judgment to be passed on them by a vote of the members.

The best teas have not changed much in price, \$10 still being asked for fine stock, seconds \$6 to \$8; a few extras are said to bring \$12 to \$15. Carnations are in full supply, and the majority go for from \$1.50 to \$2. Good Scott seem to be the best sellers. A few fine Tidal Wave are received by Samuel Pennock; a pink a shade lighter than Scott, with the good qualities of stem and form of flower such as Tidal Wave has, would be a fine seller. Hugh Graham's new sport from Daybreak approaches this ideal and is certainly a fine thing.

Jos. Kift is sending in some good sprays of *Acacia pubescens*; he has a house of it planted in the ground, and it certainly produces a lot of flowers when treated in this way. Valley is now being carried by quite a number of the growers; it is being done fairly well by most of them; \$2 to \$4 is the price; leaves, however, are scarce. One grower in order to fatten his bunches sows a few handfuls of corn with every new lot of pips and passes the foliage off on the unsophisticated for the genuine article; the nomenclature committee should hear of this. Violets are selling better. Eisenhart of Holmesburg is sending in some fine Lady Campbell. Supiot, the French grower, is doing very well with his large single, the Luxonne; his large bunches are certainly very fine. He grows them in low pit houses entirely without fire heat. In extreme weather the beds freeze up, but it does not seem to hurt the plants, as the first sun brings out a crop of flowers. Mr. Supiot says his method of growing suits him very well,

as in very cold weather violets do not sell well and his plants stand still, while good bright days bring violets and a good demand for them at the same time. White violets are scarce; very few come to this market. A dealer having an order recently for white violets being unable to obtain them sought a way out of the difficulty with some Lady Campbells and a pot of sulphur. We are unable to give the exact result, but rumor has it that he filled his order.

Plants are selling better. Harris has some very nice pot lilacs; his azaleas and daffodils are also fine. His genistas are now coming in, and are fully up to the Harris standard. Colfesh has very good Harrisii lilies in pots, the flowers being extra large; also good freesia. Becker's azaleas are fine. Mencke is also sending in quite a variety of blooming stock.

Small straight rubbers are scarce; in fact the market is entirely bare. Early last fall there was an abundance of this stock, Messrs. Harris, Craig and Dreer had a good supply as well as that held by smaller growers. Now an order for six single stem rubbers 2 feet high could not be filled. The \$2 size of latanias are also all gone and good bushy arecas in from 8 to 10 inch pots are not to be had. This state of affairs when compared with the large stock on hand at the commencement of the season goes to show that the growers of palms are not keeping up with the demand and that there is considerable room for development in this branch of the business. K.

At a Farmers' Institute held at Bustleton, Pa., recently an address was delivered by Edwin Lonsdale upon the subject of "Plants for home adornment, with some suggestions as to the best varieties for the purpose and how to take care of them," which seemed to be of especial interest to the ladies present. Mr. Lonsdale has for some time past been making a study of plants for this purpose, and has great faith in the future development of this much neglected branch of the business. In the paper delivered at Bustleton the speaker took occasion to handle the florists without gloves. He deplored the fact that so much superficial knowledge prevails among florists in general as to the proper care of plants in homes, and the best kinds for that purpose. He advises florists to take to their homes plants that are popular among customers and carefully experiment with them under the various conditions which may be found in dwellings, noting the temperature in which they do best, and the amount of water required, and at what intervals administered, so that at the end of six or twelve months intelligent advice could with confidence be given, thus solving in some measure one of the most difficult problems which confront the craft at large at this time.

After the meeting the speaker stated that he was gratified with the great interest manifested, and emphasized the fact that out of all the meetings of the sections held during last winter, and so far this season, under the auspices of the Pennsylvania Horticultural Society, Philadelphia, those which attracted the most attention were the ones devoted to plants in our homes, which is an encouraging sign, and one which should not be lost sight of by the profession.

Chicago.

As Lent approaches society moves a little faster and the flower trade feels the impulse. Both city and shipping trade this week was fairly good, stock being

entirely sold out most days. There was not an extra large supply, however. Weather has been very discouraging, being warm and springlike, and often cloudy, but in spite of this disadvantage the quality of flowers has been as a rule very good. Most of the roses coming in are excellent, particularly Bride and Bridesmaid. Prices range from \$6 to \$8, \$7 being the ruling price on good stock. Kaiserin is still being cut by the Reinbergs, and in spite of the season averages up well with Brides. Testout is fine; Siebrecht and Morgan are not plentiful enough to make much impression as yet, and we shall have to wait for another season to define their position in this market.

Carnations show a marked scarcity in whites, which are in strong demand; they sell as fancies at \$2 and \$2.50, and \$3 has been quoted for them during the past week. Others range from \$1.50 to \$2. Violets are still scarce; some are now being received from distant western points; they are said to be good flowers, but naturally the perfume is not all it should be after the journey.

Bulb stuff is selling pretty well, the scarcity of white carnations helping sales. Valley continues to improve. Daffodils are very good.

In plants our market shows little besides a few cyclamens and primroses; they are said to go very well, but this is a neglected line here. In palms the same circumstances prevail as in the eastern cities—there is a scarcity of the smaller sizes. Mr. Wittbold, who has made palms and ferns his specialty for many years, notes an enormous increase in the demand for these plants throughout the west.

Mr. G. H. Peiser of the Kennicott Bros. Co. starts next week on a trip through the south for the benefit of his health.

Mr. John P. Tonner has started in the commission business at 41 Wabash avenue, room 2. Another addition is the firm of Bartholomew & Cowdery, who have joined the wholesale aggregation at 88 Wabash avenue.

Recent visitors: C. H. Allen, Floral Park, N. Y.; Mr. Anderson of Thompson, Anderson & Kennedy, St. Louis; Alfred Broman, foreman for G. M. Kellogg, Pleasant Hill, Mo.

Rochester, N. Y.

Cut flower trade during the past week has materially improved. Dinner and wedding decorations, receptions and other entertainments are calling for large quantities of flowers, and as there is no oversupply at present in any line everything is sold out pretty clean. Low prices for carnations are still prevailing, everybody seems to be waiting for some leading firm to advance the prices, when all would follow suit and be glad of it, for every florist in town is disgusted with the unprofitable low figures. Bulbous stock, though abundantly in the market, sold well so far at very fair prices. Double and single Von Son are eagerly taken up as soon as they arrive; scarlet and yellow tulips are of fine quality and find ready purchasers. Roman hyacinths are very plenty, still they all disappear before the day is over. Valley is excellent in quality at most places, but not overplenty and is used rather sparingly except for special orders.

Mr. Geo. Savage, who at the time of my last letter was on the way to recovery, had a relapse and is at present in a more critical condition. He is a very sick man, but the doctors are convinced that his strong constitution, together with the most careful attendance he is getting,

will overcome this severe attack and restore his health. His numerous friends are very anxious to see him at his usual post again, and hope for a most speedy and complete recovery. J. B. K.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads not admitted under this head.

SITUATION WANTED—On private place by first-class gardener, married, no children. Address: A. F. care American Florist.

SITUATION WANTED—By first-class, all-round florist, good propagator, American, good references. I. P. HERSEY, Amesbury, Mass.

SITUATION WANTED—Gardener, first-class private place wanted by married man, age 40 years, no family; good recommendations. Address: B. A. care American Florist.

SITUATION WANTED—As manager commercial place, 20 years' experience; good business ability, reliable; state terms. Address: COMMERCIAL, care Am. Florist.

SITUATION WANTED—As manager or foreman, practical grower of cut flowers, decorative plants etc.; would rest or buy part interest. Address: CONFIDENCE, care American Florist.

SITUATION WANTED—By Englishman, single, age 26, experienced in general greenhouse work; good gardener; active, steady worker. Address: ROBERT MAIN, 61 North St., Gloversville, N. Y.

SITUATION WANTED—By first-class florist and gardener, young married couple, to take charge of gentleman's place with greenhouses. Best of references. Address: C. G. care American Florist.

SITUATION WANTED—As foreman or general manager of commercial establishment, or gentleman's private estate; experienced in each; first-class references as to ability and personal character. Address: A. B. 752 Grand St., Jersey City, N. J.

SITUATION WANTED—By one of the best florists in this country; only permanent and \$50 per month will please. OLIVER KING, foreman Rocky River Nurseries and Greenhouses, Rocky River, O.

SITUATION WANTED—By a young man, single, age 22, to assist inside on a gentleman's private estate; experienced forcing grapes, peaches, actineries, figs, strawberries, hot and cool plant houses and conservatory; good references. C. W. ASHMEAD, Baldwin Ave., Simonsville, Waterbury, Conn.

SITUATION WANTED—A man of 25 years' experience as manager of a large place, growing for extensive catalogue trade, also cut flowers for first-class store trade; capable to manage any place as a specialist in florist or nursery line. Only a position of responsibility, warranting adequate pay is desired. Please state particulars. C. N. St. Matthews, Jeff. Co., Ky.

SITUATION WANTED—By a man of 26 born and raised horticulturist with unusual skill and extraordinary knowledge of everything pertaining to this business as grower, manager, landscaper, shipper, designer; will travel as salesman or agent, or as collector of plants; will accept any honorable horticultural position which would keep a man with brains busy. Address: HORTICULTURAL GENIUS, care Am. Florist.

SITUATION WANTED—American, married, aged 40, no children, strictly temperate, do not use tobacco, over 20 years' experience, as grower in private and commercial places; am a good grower of roses, carnations, mums, bedding plants, palms and ferns; have worked under the best rose growers in this country; good breeder-out of all kinds of plants; active, not afraid of work, and always looking after my employers' interests; was 17 years at one place. In writing state wages and size of place; 3 years at present place. Address: ACTIVE, care Am. Florist.

NEW GOLDEN YELLOW TROPÆOLUM

"COOLGARDIE," (May).

One of the finest novelties of the season, flowers pure golden yellow, of free growth, and will keep up a succession of bloom throughout the season. First-class awards from Royal Horticultural and Royal Botanic Societies. 1 can offer a limited quantity of seed of the above, price 2s 6d per pkt. of 12 seeds, post free. H. B. MAY, Dyson's Lane Nurseries, Edmonton, London, England

Milwaukee.

A display of all the leading varieties of carnation blooms, including the newer varieties which are to be disseminated this season, will be held here; this will give all florists in and around Milwaukee an opportunity of comparing the different varieties before determining which to select for the coming season. The flowers will be displayed at the Wisconsin Flower Exchange, where all are invited to examine them February 6.

One grower in the vicinity keeps a record of his violet returns and reports an income of 50 cents a plant for last season, with fair indications of this season increasing the amount. It would be interesting to know how this compares with many others.

The demand for flowers has been fully equal to the supply during the last two weeks, the waste barrel is not used. Freesias appear to be more popular this season than ever before. The use of flowers for wearing is certainly on the increase, also pot plants for room decoration.

There is a noticeable desire here among many of the citizens for the organization of a horticultural society. A number of the principal citizens are interested in the movement. The successful development of our parks so far has awakened an interest; this is manifest in a general desire to further this work and give encouragement to those who are carrying it on by an organized backing of influence. There is hopes of Milwaukee taking a prominent position in horticulture.

C. B. Whitnall has made arrangements with the Whitnall Floral Co. by which he retires from activity in the retail trade after March 1.

Henry Jorden is looking for a suitable locality in which to start a store. Z.

Providence, R. I.

The invitation to the florists and gardeners of Rhode Island to meet at Tillinghast's assembly rooms on Tuesday afternoon, January 22, for the purpose of organizing a club received a hearty response, there being present nearly one hundred enthusiastic representatives of Rhode Island horticulture. Officers were elected as follows: President, Timothy O'Connor; vice-president, Parquahar Macrae; secretary, Wm. H. Mason; treasurer, A. M. Rennie; librarian, F. C. Hoffman; executive committee, N. D. Pierce, Jr., J. B. Canning and S. J. Renter. A committee was appointed to petition the General Assembly for an act of incorporation. The new organization starts out with bright prospects and will undoubtedly take a prominent place among the New England clubs.

6,000 BEGONIA NIVEA,

AT REDUCED PRICES.

The New Everblooming Apple Blossom Begonia. We have a large stock of this grand winter blooming and summer bedding plant; it being covered with elegant panicles the whole year round, ranking it a valuable market plant. In color it is of a delicate pink when in bud, expanding through lighter shades to snowy whiteness when in full flower, giving it an apple-blossom appearance, that is unique, and what the ladies call "just lovely."

In order to make room, and to place in reach of all, we offer 6,000 plants only at reduced rates if ordered before March 1st, 1895, after which date, prices will be advanced. It is a most vigorous grower, propagates easily, and has come to stay. The plants are well branched, well established and first-class in all respects, and sure to give satisfaction. Up to date florists should secure some of this stock for their floral work.

We guarantee safe arrival in good condition, and extras added to all orders of one dollar and upwards by express. Cash with the order. 40 plants at 100 rates.

Address THE AMERICAN FLORIST CO., Chicago.

St. Thomas, Ont.

Christmas here was, as in most places,
dark, drizzling and dirty. The Saturday
trade was hardly up to last year, but
Monday and Tuesday were away ahead
of expectations. Roses brought \$2 a
dozen (no Beauties), with good demand;
carnations 60 to 75 cents, with the pick
of Daybreaks at \$1 per dozen; violets 25
cents. A few 'mums were still offered, but
the demand was not strong. There was
a larger sale this year than formerly in
palms and choice decorative plants, also
in azaleas.

Hugh C. McLean has just purchased
another site in the city, where he will com-
mence on March 1 with the building of a
fine block of houses, each 75x20. There
will be five houses in this new block,
which with the present houses will give
him over 10,000 feet of glass. Two of the
new range of houses will be short-span-
to-the-south, with continuous ventila-
tion. A 50-horse power boiler after the
pattern of Deere's new boilers at Riverton
will furnish the "summer in winter" by
means of hot water. A potting shed will
run across the ends of all the new houses.
A store 16x20 will be erected on the
street, with two good show windows
and cut flower cellar under, making this
quite a model establishment.

W. J. Jordan, who has been doing busi-
ness as florist in Dutton, Ont., has sold
his business there and will be in the em-
ploy of Hugh C. McLean after March 1.

LIN.

I GROW as fine a Collection of
DAHLIAS

Re Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

S. E. BRIGGS, Pres.; T. W. WOOD, 1st Vice-Pres.; ALEX. RODGERS, 2nd Vice-Pres.; A. L. DON, 1st Chamberlain; New York. Sec'y and Treas. The fourteenth annual meeting will be held at Niagara Falls, N. Y., June 9 to 11, 1896.

American Seed Trade Association.

On January 20 the executive committee of the American Seed Trade Association held its annual meeting at the Iroquois Hotel, Buffalo. There were present ex-President D. I. Bushnell of the D. I. Bushnell Company, St. Louis; President S. E. Briggs of the Steel, Briggs Company, Toronto; Vice-President Alexander Rodgers, who is president of the Illinois Seed Company of Chicago; Secretary and Treasurer A. L. Don of Weeber & Don, New York; Irwin B. Clark of O. W. Clark & Son, Buffalo; C. L. Allen of Floral Park, N. Y.; W. S. Grennell of Pierpont Manor, N. Y.

The committee fixed upon June 9 to 11, 1896, as the date and Niagara Falls as the place for the next annual convention of the association. Reports showed that the association is growing rapidly and now has a membership of more than 200.

Men interested in some of the allied trades were in Buffalo to confer with the seedsmen, notably F. D. Wolfram of the Monitor Works, Joseph Martin, Fred Cranston and F. M. Smith, all interested in the Silver Creek manufactories of mill machinery.

Warranted Seeds.

The American Seed Trade Association, and high class seedsmen generally, have for the past decade religiously stood by the NON-WARRANTY flag until the horticultural public have come to accept its conditions as fair ones, viz., that the seedsmen should not be required, at the price paid, to assume responsibility for the crop; now for 1896 come certain leading American houses and for the sake of a little cheap personal glory boldly advertise "— seeds are warranted," believing well that the ten years' stand so well maintained by the leading houses in the trade has so educated the gardening public that no individual will claim a warranty for the crop on such an adv.

Is it fair and honorable to grab at this little cheap buncombe at the risk of destroying the foundation laid by ten years of hard work by the whole trade on this line? We think not. We must believe, however, that such representations will reap a reward—but can we even hope that others will not suffer also and will not the whole trade lose much vantage ground already gained?

A ST. PAUL inventor has patented a packet filling machine, which is claimed to be capable of filling and pasting 3,000 packets per hour. It is worked by foot power.

THE Sibley Seed Co. has been incorporated with headquarters at Sibley, Ill. Capital stock \$15,000. The incorporators are J. H. Bagley, W. A. Becket, T. J. Ruff, Geo. Stockdale, Frank Skinner and C. W. Cook.

RAIN has fallen steadily in Santa Clara County, California, for the last week and is now decidedly overdone. Some of the big onion fields in the lowlands are entirely under water, and unless it dries up rapidly an immense acreage will be rotted. The same will apply also to cabbage, sweet peas and other seeds.

WE REPEAT....

WHAT WE have already said, that we regard all FLORISTS wise that take advantage of the following items:

	Trade Pkt.	Ounce		Trade Pkt.	Ounce
Salvia Splendens, -	.25	\$1.50	Cyclamen, Giganteum,	1.00

PANSY SEED.

THE JENNINGS STRAIN OF FINEST AMERICAN CROWN PANSIES,

In pkt. of 2500 seeds \$1.00, very finest mixed, all colors. Large flowering plants all sold.

E. B. JENNINGS, Pansy Grower,
Lock Box 251 Southport, Conn.

Worcester, Mass.

The only social event of any importance this last week was the Light Infantry ball and that had no very noticeable effect on trade. The palm decorations were arranged in good taste and were quite elaborate; F. H. Wesson was the decorator. No especial change in the general run of trade since my last notes, we are getting very fine flowers and selling them at good prices, and there is no noticeable surplus. A. H. L.

Greenhouse Building.

Northampton, Mass.—Smith College; range of six houses with potting room and botanical workshop.

MRS. GEO. R. FRAVELL, Marion, Ind.

AT BOSTON ONCE AGAIN.

CARNATIONS

DELLA FOX and ANNIE H. LONSDALE,

reappeared at the Boston Flower Market on Jan. 18th, 1896, after an absence of one year; created quite a stir and much admiration among the growers of that locality, and were in charge of W. W. Tailby, our eastern Agt, who booked orders for the one day for about 10,000 rooted cuttings for March delivery. We exhibited plants as well as blooms for the benefit of those who are not able to see them as grown by us. We do not need to repeat here that they are the most prolific as well as the strongest growers and making the longest stems of any carnation in cultivation.

COME AND SEE THEM.

One Hundred Dollars in Cash Premiums will be offered for the best 50 blooms of **DELLA FOX** in the fall of 1896—divided in the four largest cities in the U. S.

ROOTED CUTTINGS. Price: Less than 100, \$12.00 per 100. 100 @ \$10.00 per 100. 1000 @ \$75.00 per 1000. READY MARCH 1st, 1896. No orders will be booked unless cash accompanies order or satisfactory reference given. Sample cut blooms will be sent to florists' clubs only on application.

MYERS & SAMTMAN, Wyndmoor, Chestnut Hill, Phila.

HERR'S CARNATIONS.

ROOTED CUTTINGS

that will give good results, because they are taken from healthy stock, and will be well rooted when sent out.

VARIETIES—McGowan, Mrs. Fisher, and Alaska, the best of all whites. Daybreak, Scott, Aurora, Sweetbrier, Rose Queen, Peachblow, Dorner, Stuart, Portia, Jubilee, Buttercup, Eldorado, Kitty Clover, Keller, Iago, and Meteor, the best of all dark ones. Thomas Cartledge and Wave; also all the Novelties, including **Annie Lonsdale** and the hit of the season **DELLA FOX**.

Don't place your order before writing to me. I have fourteen large houses full of Carnations and think we can make a deal. In asking for prices please state how many you will want of each variety and when they are to be delivered.

L. B. 496. **ALBERT M. HERR, LANCASTER, PA.**
Mention American Florist.

Crimson Sport Carnation.

This new carnation originated with us six years ago and has been thoroughly tried before offering it to the trade. Crimson Sport, as its name will imply, is a sport from Unique, which was a sport from Lydia. Crimson Sport has the strong, healthy growth of its parent, very large crimson flowers, free from rust and disease, very prolific, long, stiff stems, perfectly healthy growth, a good shipper, a good keeper and all in all the best crimson carnation now in cultivation. We say this after growing it several years and comparing it with all the recent introductions and old varieties.

Having plenty of stock our cuttings will be taken from perfectly healthy plants that have not been forced or propagated to death, as is often the case.

Call and see it growing or send for carnation circular of this and other varieties.

ROOTED CUTTINGS, \$1.50 per dozen; \$10.00 per 100; \$60.00 per 1000.

J. L. DILLON, Bloomsburg, Pa.

Handwritten text:

No take pleasure in getting 25 new carnations, indicating who show a like to draw your attention particularly to **Crimson Sport**, **Eldorado** which we believe is destined to take the lead in place among yellows, as it has shown up equally well on both sides and in the market being up double the price of ordinary varieties, and **Parquet** violet, which is making quite a stir in New England and of which we have very light clean stock.

Signature: Edward Swayne

Try EDITH FOSTER,

ROOTED GARNATION CUTTINGS.

If you want to be successful in growing good flowers that will bring paying prices get your cuttings from prize winners. Our blooms are bringing the highest prices and we have been unable to supply the demand. We received a gold medal at the Atlanta flower show for best collection and all the first premiums on the schedule (7) at the same show; four first premiums at the Madison Square Garden show, New York, where our flowers came in competition with those from the best growers in the country; likewise in Baltimore and Cincinnati.

We can fill orders for 100 or 50,000 of all the best varieties up to date and guaranteed free from rust, fine, vigorous, well-rooted cuttings.

Let us know your wants and amounts and we will give you prices which we believe will be satisfactory for high class plants.

Be careful in selecting your stock as this is the foundation for either success or failure.

Send for price list.

P. S. We are still booking orders for growing for 1c each. MORRIS FLORAL CO., Morris, Ill.

Grand Rapids, Mich.

Society is taking a rest after the holidays, and so are the florists. New Years never amounts to much, and was no exception this year. The Elks celebrated in their hall New Years eve with an elaborate banquet and stage performance. Henry Smith furnished the plants and had several handsome mounds and banks. Creelman trimmed the arches and pillars, as well as the tables, using 175 strings of smilax. Each plate had a daisy favor (margarite), significant of "Daisy lodge." The churches did very little trimming at Christmas. Crabbs & Hunter had St. Mark's as usual, and Renwick the Fountain street Baptist.

Eight hundred invitations were sent out, and six hundred responded to the swell party at the Morton House New Years night. The parlors were trimmed, as was also the large dining room, with palms, ferns and smilax; not a single cut flower was used anywhere. Creelman did the trimming.

Flowers are getting more plentiful, although we are having very little sun. Chapman is cutting the best Daybreak and Spray carnations ever seen here, and ships a great many to Chicago. His returns make the retailer envious, though he cannot boast, as do Hopp & Lemke, of receiving \$11 per hundred (?) from their commission man at Christmas, and they were sold in Chicago too.

Jas. Hancock, Grand Haven; F. J. Meech, Charlevoix, were recent visitors. Wm. Scott has moved into the city again. CREELMAN.

Sharon, Pa.

The question whether it pays to grow orchids for commercial purposes has been most successfully solved by Mr. M. I. O'Brien, who, besides his local trade, finds an ever-increasing demand for these flowers from outside places, especially from Pittsburg. Mr. O'Brien's success in growing orchids is exceptional.

The most notable event which took place recently was the banquet and hall given a millionaire iron manufacturer at his handsome mansion.

The decorations for the occasion were carried out on a most elaborate scale, among other things orchids and choice roses having been used in great number. Mr. O'Brien took charge of the decoration, and it is needless to say did ample justice to it.

Mr. John Mueher has erected two carnation houses, each 20x150.

Mr. O'Brien has added one more carnation house 20x110, his whole plant covering now 15,000 feet. HOMO.

BETTER THAN EVER. CHEAPER THAN EVER.

CHRYSANTHEMUMS.

(Ready February 1st.)

APOLLO—Gracefully incurved yellow, late, fine form, good stem and foliage. Free grower, always produces perfect flowers, height 3½ feet. A No. 1 commercial variety, and a grand single stem pot plant. Strong, healthy plants from 2-inch pots, 20 cts. each; \$15.00 per 100. 25 at 100 rate.

News Notes.

FREEPORT, ILL.—W. S. Fisher has opened a floral store in the Y. M. C. A. building.

SCHENECTADY, N. Y.—J. E. Felthousen will build two new houses this season, 20x225, three-quarter span.

LAKEWOOD, N. J.—A new greenhouse 30x130 on the grounds of A. S. McBean was blown down during a heavy wind, involving a loss of \$1,500.

PHILLIPSBURG, N. J.—Wm. Baumgarten has rented the flower and vegetable business of Alexander Schultz; the latter has retired after thirty-five years of successful business life.

COBLESKILL, N. Y.—Chas. Limmer has taken down an old house 14x40 and erected a new one 28x50, the center of which will be used for sweet peas, to be followed by chrysanthemums; the side benches are used for general spring stock of bedding plants.

COLUMBUS, O.—Underwood Bros. are busy putting the finishing touches to the two large houses recently added to their plant; they also intend giving their other houses some overhauling, such as replacing the old benches, painting, etc. Mr. S. F. Stephens is remodeling his office in connection with his greenhouses.

COLUMBIA, TENN.—D. E. Dortch has purchased the property and stock of the Columbia Greenhouse Co. He has just completed one new house 18x60; will soon begin building two other houses, one 9x120, the other 15x120. The system of heating is flue and hot water combined. Trade is somewhat on the increase. The demand is greater for decorative plants.

FERGUS, ONT.—The annual meeting of the Fergus Horticultural Society was held on the 8th inst., at which the following officers were elected for the ensuing year: Jno. Beattie, president; G. A. Reid, vice-president; G. W. Murton, secretary and treasurer; directors, Robt. Brooks, D. S. Burk, R. H. Perry, T. J. Hamilton, A. Perry, Peter Bayne, Jas. Pattison, Jesse Anderson and J. S. Steele. The secretary gave a very satisfactory report for the past year, showing the society to be in a flourishing condition.

...PREPARED BY...

Louisville Spirit Cured Tobacco Co.,
LOUISVILLE, KY.

News Notes.

BIDDEFORD, ME.—Josiah H. Boston, well known as a gardener, died January 20, aged 66 years.

READVILLE, MASS.—Walter Butler has discontinued his flower store and will do business at his greenhouses only in future.

PAWTUCKET, R. I.—Andre Fearn, proprietor of Mineral Spring Greenhouses has made an assignment to Jas. E. Bani-gan.

PROVIDENCE, R. I.—An enthusiastic meeting for the purpose of organizing a gardeners and florists' club was held here on Tuesday, January 21.

NYACK, N. Y.—The greenhouses of Howard Blauvelt on Fifth avenue and Franklin street were sold under foreclosure on January 11, to Andrew Wood.

MIDDLETOWN, OHIO.—The south wall of a large greenhouse belonging to Henry Behrens gave way on the morning of January 8, wrecking the house and ruining the contents.

LITTLE SILVER, N. J.—Mr. J. T. Lovett has purchased enough of the stock of The Lovett Co. to again give him a controlling interest, and the concern will hereafter be under his sole management.

WARREN, PA.—Mr. D. Offerle is about to commence building four houses, each 150x24. These will be equipped with the best modern appliances and adapted for roses and carnations. Both Mr. Offerle and Mr. W. M. Lott report a good and steady increase in their trade.

BRATTLEBORO, VT.—Carl S. Hopkins has started in the nursery and seed business here. His business address is Green Mountain Seed Gardens. Trade here has been very good in the cut flower line. Carnations seem to be the standard flower up to date, but daffodils sell well, also Harrisii lilies. There is not much done in the plant line here until about Easter.

PEEKSKILL, N. Y.—Edson L. McCord is a new florist on Main street, with about two thousand square feet of glass. The business is entirely that of a local trade. The business of J. S. Baker has been sold to J. N. Tilden, no change in size of the plant. Trade is very dull, and the demand is very limited, only for an occasional bunch of mixed flowers and a few ornamental plants for house use.

POUGHKEEPSIE, N. Y.—Mr. John C. Haggerty, a member of the firm of R. V. Haggerty & Sons, and son of the late James Haggerty, who built the first greenhouse in this city in 1853, died last November, aged 30 years. Since the death of James Haggerty in 1881 the business has been carried on by his widow and sons under the firm name of R. V. Haggerty & Sons. The title will now be R. V. Haggerty & Son.

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafters, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

RICHMOND, IND.—At the annual meet-
ing of the Society of Indiana Florists held
here February 6 officers for the ensuing
year were elected as follows: J. S. Stuart,
Anderson, president; Henry Rieman, In-
dianapolis, vice-president; Robert Mc-
Keand, Indianapolis, secretary; F. Hunt-
ington, Indianapolis, treasurer. Arrange-
ments were made for a chrysanthemum
show at Indianapolis next November.

WE HAVE RECEIVED from the secretary
of the Toronto Gardeners' and Florists'
Association a printed statement showing
receipts and disbursements during the
year, including matters connected with
their exhibition and much information of
interest concerning present condition of
the club. The statement is remarkably
full and complete, and we believe that
secretaries of other clubs would find it of
much interest. We have no doubt that
the secretary of the Toronto club would
furnish brother secretaries with copies.
The address is E. H. Carter, secretary,
280 Gerrard street, Toronto, Ont.

Ferns.

For the past two or three years public
taste has turned towards the larger
growing ferns which possess a graceful
arching or drooping habit, and the sales
in such plants are increasing with every
season. These ferns are well adapted for
pillar stands or for large jardinières in the
parlor, and are preferred by many to a
palm, dracæna or any other foliage plant
on account of their foliage being justly
considered finer, more elegant and airy.
Their lasting quality compared with
many of the palms may not be exactly in
their favor, but where watering is not
neglected and the plants are allowed a
fair amount of the necessary light, no
trouble should be experienced in keeping
the plants in health for a whole season.
The most popular species at present
seems to be the *nephrolepis* in variety,
and justly so, for they are among the
easiest to handle, they will endure the
drying atmosphere of a room admirably,
and when grown to a fair size are really
a most desirable plant for the purpose. A
few plants of them planted out in a
shallow bench will in a short time pro-
duce young stock in sufficient quantities
for all ordinary purposes. Young crowns
are formed on the numerous very slender
and wiry runners springing from the
stronger and older crowns, and when
these young crowns have made three or
four fronds they may safely be removed
from the parent plant and potted up.
Small sized pots should be used, for if
plenty of pot room is allowed to such
small plants there is more or less danger of
over-watering, them until rooted through,
and all the *nephrolepis* dislike water
standing around the roots, although
when once established they will absorb a
great quantity of moisture, and should
at no time become dry, else the leaflets
will turn yellow and drop off leaving the
frond stems entirely bare. For this rea-
son good drainage is the most essential
point in potting these plants, the potting
material is only of secondary importance;
they do equally well in a heavy or in a
light soil, and seem to draw their nour-
ishment almost entirely from the water.
Shallow pots or pans seem to suit them
best, the soil in these is less liable to turn
sour, and the roots of the *nephrolepis*
have a natural tendency to run near the
surface and to spread out. Young plants
of this fern will quickly grow into large
specimens fit to go into 7 or 8-inch or
larger pots, but after attaining that size
any further repotting is not necessary.
All they want then is plenty of water;
fine specimens in such sized pots have
done well with us for a number of years
without any repotting or feeding and
with only ordinary care.

The variety most extensively grown at
present and perhaps the most popular
kind is undoubtedly the old and well
known *N. exaltata*; it is of rapid growth,

forming good specimens in less than two
years. The long narrow fronds will grow
to a length of three feet, arching or bend-
ing over in a graceful style, and it is a most
desirable variety. *N. davallioides furcans*,
which has been described already in these
columns is surely one of the very best, but
is not to be confounded with *N. daval-
lioides*, the latter is a very distinct plant
of robust growth, easily distinguished by
the peculiar mode of setting seed in one
compact mass at the tips of the leaflets,
which latter are much narrower and
longer in the fertile fronds than in the
barren ones, and also have their lobes cut
in much deeper. In *N. d. furcans* we have
an entirely different plant, I can see no
resemblance to the other and have
often wondered how it came to its name,
here the seed-bearing fronds are exactly of
the same size and shape as the barren
foliage and the sori or seed spores are
distributed along the leaflets in round
separate dots. A very free growing and
most ornamental variety, with substan-
tial leathery foliage and long elegantly
arching fronds.

N. rupestris tripinnatifida is grown to
some extent by a few growers only, for
some difficulty is occasionally encountered
in raising fine specimens of this deserving
fern, the center of the plant after a while
decaying or giving out in some way.
Notwithstanding this perhaps serious
drawback it is a grand plant, possessed
of handsome free and upright growth.
The fronds are very broad, of a dark
glossy green, and present a massive, still
light and feathery appearance produced
by the three times deeply divided or
fringed pinnae or leaflets and their deeply
cleft margins, which are overlapping each
other. The growth is semi-erect, their
height two and a half to three and a half
feet. The stalks and midribs are of a
shiny dark brown, the lower part covered
with a red pubescence. Little difficulty in
growing this splendid fern will be experi-
enced when young plants with only one
crown are employed for growing on
instead of attempting to doctor up older
or damaged individuals. This variety
more than any other should have perfect
drainage, for it requires lots of water also
a higher temperature will be beneficial.

N. cordifolia, *N. tuberosa*, and *N. cor-
data* seem to be one and the same thing
and are found in many places mixed up
with *N. exaltata*, which latter it some-
what resembles in many respects, though
the true plant grows more erect and the
leaflets are set closer along the stem, the
fronds also are shorter and stiffer than in
that variety. *N. pectinata*, a smaller and
much neater variety, deserves to be grown
more generally. The compact growth
and freedom with which the long and
arching narrow fronds are produced
should recommend it to all. The fronds
resemble those of *N. cordifolia*, but are of
smaller dimensions and narrower, of a

lighter shade, growing only to a height of 1½ to 2 feet. *N. acuta* much resembles the well known *N. exaltata*, but is rather a stronger grower with broader fronds and larger leaflets. This also is seen in many places under the latter name, and is surely one of the best for decorative purposes, and a very fast grower. *N. Duffii*, though an elegant neat little species is not considered of much value for the purpose, being entirely too small in its dimensions. Aside from the *nephrolepis* there is a number of other ferns which when grown into fair sized specimen will sell readily. Among the best of these we may mention the old and reliable

Pteris argyrea, a very robust and free grower attaining a height of 2½ to 3½ feet. The broad silvery white band in the center of the leaf and along the midrib of every leaflet are prominent features in this variety. No great skill is required to grow good specimens of it inside of a year; starting from small seedlings; any ordinary good soil will suit it, and after it attains the required size it may be kept in a cooler house to harden off. It will stand the lower temperature exceedingly well. *P. nemoralis* is another robust species, resembling the above in some respects, without the silvery variegation, the fronds are not as deeply cleft and are considerably less in width, but it is a grand fern for the purpose, and a very free grower, only requiring a little more heat than the first mentioned. *P. tremula* is well known to everybody; being of quick growth we may have large specimens inside of a year with only ordinary care. Its variety *P. t. foliosa* is an improvement on the ordinary species, having broader and larger fronds. The leaflets also have undulated or wavy edges. A cool house is best for them.

In *aspleniums* several kinds may be mentioned, such as *A. longissimum*, which is a most splendid species with long narrow arching *nephrolepis*-like fronds. The leaflets are set close to the stalk, which in well grown plants will attain a length of 2 to 3 feet. The color is a very dark green, and their texture is leathery and stiff. A free and strong grower requiring a rather warm place to do its best, but it is a very lasting fern, owing to the firmness of the leaflets and its ability to hold on to the latter when the plant gets dry. *A. bulbiferum*, perhaps the best known species of the large family of *aspleniums*, is a most vigorous grower when once fairly established, and should be a favorite among the growers of large sized ferns. The habit and growth is most elegant in large plants, the deep glossy green of the long arching fronds, which are from 2 to 3 feet long, is retained on the oldest leaves for a long time even if the plant be neglected in watering at times and it holds its own in a dwelling house air better than any other fern I know of.

A. laxum is a smaller and more compact growing variety but in general aspect much resembles the above; the height of the plant when fully developed is only 12 to 16 inches, still it is very desirable. *A. formosum*, another of the medium sized ferns grows to about 1½ feet under ordinary circumstances. It is of a light green and has deeply divided and lacerated fronds, which are produced in uninterrupted succession all the year around. Although this plant has the appearance of possessing a most delicate nature there is no difficulty in keeping it in a healthy state, for its constitution is considerably stronger than it looks to be. *A. cicutarium* belongs to the same group,

with finely divided fronds of medium size requiring more warmth than the average *aspleniums*. When fully grown this plant presents an exceedingly elegant and delicate appearance, though it is by no means a difficult fern to manage.

Lastrea lepida, probably the most beautiful and attractive of all *lastreas*, is a rather rare fern, and though it seeds freely we as yet have never had much luck in raising young seedlings. The elegant fronds spring from a center crown arching outward, forming thus a very symmetrical well shaped plant about 2 feet in height. The fronds are composed of numerous long narrow leaflets, which are 5 to 6 inches long at the lower or widest part of the frond, diminishing in size towards the upper part and terminating in a very sharp point, the edges of the pinnae are deeply serrated. *Lastrea aristata* also may be mentioned in connection with useful decorative ferns, the thick leathery fronds are of great substance and will endure rough treatment to a great extent.

Cyrtomium falcatum and *C. caryotideum* are both well known hardy ferns which can safely be recommended, and which may be grown to a fair size in a short space of time. Both will stand the drier air in a dwelling admirably well.

Scolopendrium vulgare, especially the undulated and crested varieties will be found a first-class addition to the above mentioned species and varieties. Although not of tall growth it produces its fronds in such quantities and has such an attractive dark shiny color; the leaves so thick and leathery in structure, which will endure the roughest treatment without injury. In many cases where taller plants are objected to this superb fern may find a place, for it forms an elegant compact specimen when grown into a size requiring a 6 or 7-inch pot.

To grow specimen ferns of any description successfully will require plenty of bench room, for nobody can possibly grow these plants well if they are in any way crowded together, and therefore a good price must be obtained for such stock. There is little danger that the market would ever be overstocked with the larger sizes, although the smaller ferns may at times be over-plenty in some sections of this country. J. B. KELLER.

Rochester, N. Y.

Fern Notes.

Taking the immense number of species and varieties it is surprising that so few should be grown in quantities, especially as they are now used in almost all floral decorations. I may here enumerate the principal sorts grown for our London market. They are the ordinary maidenhair (*Adiantum cuneatum*), *Pteris cretica* and its varieties, the lightly crested variety and the broad fronded variety known both as major and *Ouvrardii* being the most popular. Another fine form is *nobilis*, heavily crested but of a stiffer habit of growth. *Mayi*, the crested variety of *albo-lineata*, is also a favorite. Of *Pteris serrulata* there are numerous variations; the best dwarf variety is *serrulata cristata compacta*, and that known as the Chiswick variety of *serrulata*. Major *cristata* is one of the best, but as this rarely comes true from spores it has not been so much in demand since the better varieties of *cretica* have come to the front. *Pteris tremula*: Of this there has been several varieties brought forward, but the normal form still holds its own. The fine crested variety *Smithiana* was thought to be a grand thing when it was first brought forward, but

it has been found to be too brittle, and the crested tips keep growing and are consequently very tender.

Phlebodium aureum is grown very extensively, and curiously enough no distinct varieties have yet occurred. *Cyrtomium falcatum*, of which *Fensomii* is the best variety, is one of the best winter ferns. Of *aspleniums* the sorts are confined to the *bulbiferum* type, *biforme* being the one most extensively grown. Another popular variety is *A. laxum pumilum*, this is a beautiful fern, but it does not make stock so freely as *biforme*, though plants command a better price in market. Those above referred to are all grown in very large quantities. There are of course some others which find some favor. Within the last year or two the *nephrolepis* have been taken up by some growers, *exaltata* being found very useful. Some of the *davallias* also claim some attention, but I will refer to these later on, as I propose to give a series of notes on useful ferns and their culture.

A. H.

Adiantums.

Cuneatum still holds first place among maidenhairs, though there are many other useful sorts, foremost among which is *A. elegans*. This has larger fronds and grows taller; for many purposes it is preferable, as it stands up so well. It also has the advantage of being hardier. I find this will grow freely in winter, while *cuneatum* remains quite dormant. Of larger fronded sorts *A. scutum* is one of the best. When this is well done it stands well either as a pot plant or when cut. *A. Collisi* is a very fine variety with large much divided fronds and rather small pinnales, this makes a grand plant, but has not yet come much into commerce. *Adiantum Farleyense* is now grown to some extent, and when treated properly is found to stand fairly well. *A. Williamsi*, which thrives well under cool treatment, has been grown to some extent, but chiefly for supplying cut fronds. I may here mention that though fairly well matured fronds last well, when they get a little too old the pinnales drop off. I know of no other *adiantum* which has this peculiar character.

Of the small compact growing sorts *A. Mundulum* and *A. Pacottii* are the most useful, both making compact plants for edging, etc. *Mundulum* is also useful for cutting, the small fronds being useful for buttonhole bouquets, etc. Among others worthy of attention are: *Lathonii*, *Reginae*, *fragrantissima*, *fulvum* and *æmulum*. *A. assimile* is the best for covering the porous pots referred to in a recent number of the AMERICAN FLORIST. *Moorei* is another useful one for the purpose, but loses its fronds in winter.

Of newer sorts which may prove valuable *A. tenellum* and *elegantissimum*, both of which are varieties of *æmulum*, are likely to come to the front.

All the *adiantums* referred to above, with the exception of *Farleyense*, may be raised from spores. *Williamsi* is not so free as most, but as it has spreading rhizomes it can be propagated by divisions. In collecting spores of the *adiantums* the fronds which have only a few of the spore cases open should be taken, and to insure getting each sort as true as possible plants which have been grown isolated from other sorts should be selected. Although fern spores are supposed to retain their vitality for an almost indefinite period, I prefer new spores, especially for *adiantums*. In sowing fern spores the chief thing is to get some clean fresh loam to sow on; pots

THE NEW FERN-HOUSE, LINCOLN PARK, CHICAGO.

filled with pure clean loam and surfaced with a little charcoal and some burnt earth or broken pots powdered up fine will be found the best for raising fern spores. The pots may be covered with glass, or if in a shady moist place this is not necessary.

As soon as the pots are well covered with the green prothalli the pricking out should be commenced. The small seedlings or prothalli as they are called may be taken out in little patches with the point of a knife. We do them off into small wooden boxes about two inches deep; these are filled with suitable compost and surfaced over with a little which has had more sand added and passed through a fine sieve. The patches referred to above may require dividing again later on. During the early stages of growth all the adiantums require great care when being pricked off or potted, for if the fronds get a little withered it will cause damping.

Adiantums succeed best if potted on before they get pot-bound. In growing them on it is essential they should have as much light as possible. During very bright sunshine a little shading is necessary, but shading is often overdone, as is watering; plants should never be allowed to become too dry, but over-watering is more often the cause of failure than otherwise.

For cut fronds I find plants grown on until they are large enough for 6-inch pots are the best, and it is after the pots are well filled with roots that they make fronds of better substance. In our London market it is only fronds of a pale green which sell well, and it is only from

those grown well exposed to the light that these can be obtained.

A. Farleyense has to be propagated by divisions. I find that young plants which can be broken up in three or four and some good fresh roots retained succeed much better than when old pot-bound ones are divided. The spring time is the best. If done carefully and the fronds are not allowed to get withered they will start away freely. They must be kept quite close and shaded for a few days. Farleyense succeeds best in good fibrous loam and leaf mould, plenty of sand may be added and good drainage given. It is only since growers have grown this fine fern in such positions that they get the fullest amount of light that it has been found of any service for decorations. Under the old system of heavy shading and moisture the fronds were found to shrivel up almost as soon as they were brought into daylight. If started and grown on throughout in full daylight it is surprising how much sun the most delicate adiantums will stand without being in any way damaged.

A. H.

New Fernery at Lincoln Park, Chicago.

The accompanying views give but a slight idea of the beauty of this excellent addition to the park conservatories. The rock used is of a very porous character, partly volcanic and partly of vegetable matter covered with a deposit of lime, and will make congenial ground for self-sown seedlings. The rock work is carried up to the gutter plate, the walls being entirely hidden, as are also the heating pipes which occupy the space between

the wall and the back of the rockwork. Holes are run through the rockwork at frequent intervals at the bottom so the cooled air may pass to the heating pipes again after descending from the roof.

At one side there is a small waterfall, much broken in its lower course, along which moisture loving plants are being naturalized. The water passes then under a rustic stone bridge to the pool seen in the large picture.

The ferns are of course planted in pockets of prepared soil. The idea was to follow nature as closely as possible and she is expected to complete the work of covering what may now be bare.

Head gardener Strombach is to be congratulated on the manner in which the plan has been carried out.

Tempering Water.

We send a device for warming water for greenhouse purposes, which has given us good satisfaction for several years. Though not original with us we send it in for the benefit of florists who may be deterred from putting in a device of this kind thinking it more expensive than it really is. Procure a second hand 30 gallon kitchen boiler or tank from a plumber which will cost \$3 to \$5. If the plumber does an extensive business he will usually have several of these on hand. Have him run a piece of inch pipe forward and back through it. This will cost perhaps \$3 more, and it is now ready to connect with your city water pipes. Run a steam pipe with a globe valve from boiler into it; run another pipe with a check valve and air cock back from it to the boiler, and it

is ready for use when warm water is wanted. For economy we placed our tank in a nearly horizontal position in the corner of one of our greenhouses, under the bench, where we need a little extra heat. With this device you warm only what water you use, with 5 pounds pressure one gets water 130° to 140°, if not run too rapidly. We think a good syringing on bright days once in a while with fairly hot water one of the best methods of keeping carnation rust in subjection. Rose houses also can be more thoroughly wetted, especially the underside of the leaves, with hot than with cold water. The many beneficial results of using warm water instead of cold are well known to the trade.

MCCREA & COLE.

Battle Creek, Mich.

Carnation Notes.

With much interest I have read the report of the carnation meeting held by the Chicago Florist Club, and I regret very much to have been detained from attending that meeting. The discussions are indeed very interesting and give much food for reflection. Such discussions show how far we are from perfection in our work, how deficient our knowledge appears, when opinions are so different, experiments clashing in the results. Theories arrived at by experience and practical work are met from other quarters with the reverse. But such discussions, an exchange of ideas, a comparison of experiments, where all factors advantageous and detrimental are noted pro and con, will some day enable us to sum up results comprehensible and beneficial to all. I cannot omit here to point to the forthcoming carnation convention, where the opportunity is offered us to take part in and listen to the discussions and deliberations concerning the welfare and promotion of our trade.

The resume of the discussion on the growing of high grade flowers sums up as follows: Proper soil, suitable environs and understanding care will grow healthy plants and produce high grade flowers. Or in other words, high grade flowers are the result of an understandingly careful high cultivation. This requires more work, more care, more expense, but will amply repay in better returns.

Much stress is laid on the soil, and rightly so, for the soil is the first thing to be considered. I concur fully with the assertion that a clay loam is the best soil for carnations, as for many other plants (I am sorry that I have been unknowingly the cause of Mr. Hill's making his soil too light for nicety's sake), but when too stiff and heavy I would object. I like to ask the lucky possessors of such soil if they use it untilled, unprepared, or if they give it a good turning and use freely stable manure. This will not only enrich but in such soil will act mechanically, and is in fact a necessity. A heavy clay loam is naturally the richest soil, richest in mineral nourishment, so essential to build up a plant, and in the production of seed, consequently blooms. When we make such soil lighter, more friable, open to the air, we hasten the solution of these mineral ingredients, make them palatable for the quick consumption of the plants, and

enable their soft roots to penetrate the soil in quest of these riches. Our hard wooded trees grow only well in clay soil, our best wheat, with a stiff straw to carry the heavy heads, is grown on the uplands where clay dominates. Properly prepared this soil is the best for most of our soft wooded and herbaceous plants. The growth of the carnation is not as quick, the plants will not bloom as early as in a lighter soil, (so this infers that a lighter soil promotes root action) but is more substantial, more lasting, and I would recommend such soil wherever the climate will allow a growing of young plants to maturity under glass. But plant a carnation in the stiff heavy natural clay loam and it will feel like a man with feet bound told to walk.

With this view I will not say that light and sandy soils cannot be made equally good. Here we have to supply the mineral parts, so deficient in these soils, to give the plant more stability, the stems and flowers more substance and strength. While a heavy clay loam may be sufficiently enriched with good stable manure, light sandy soils are more difficult to handle, for they are naturally poorer, and it is not so easy to ascertain of what parts the soil is most deficient. Here is where we have to try, to experiment what kind of manures to apply. This accounts for more failures in growing high grade flowers in light soils. I see in another paper a report of this discussion wherein is referred to Dorner's light soil idea. Now, I would not like to be misunderstood. I never would give a light, as the poorer soil, the preference to a heavy rich one, but I say the heavy soil, especially the stiff clay loam, has to be worked mechanically, be made light with sand, stable manure, something to break its tenacity, to make it available for our soft plants to thrive in to promote root action. We must not confound our herbaceous carnation with the hard wooded rose.

We have on our place sandy loam and clay loam. The clay loam we intend to use we plow in the fall, after giving it a coat of strawy manure; in spring we repeat this, and in summer give it one more plain plowing. Beginning of August we throw this ground up in a ridge, with layers of well-rotted manure, bone meal and horn shavings between. When taken to the house we add some of the sandy loam; so the whole is in proportion as follows: 2 parts clay loam, 1 part sandy loam, 1 part manure. This is my light soil idea and I have fared well with it so far. Further, I have found that all of my soil is deficient in lime, so in December I gave a top dressing of hard wood ashes, and results show up very satisfactory. Next fall I will add some ashes and lime to the compost.

It will not take necessarily new varieties to grow high grade blooms, any variety that will respond to the push of a higher cultivation, has vigor, and if able to digest the food given will do, if we only know what to give and the limit thereof. This is demonstrated in this very paper in the report from Buffalo, where in one establishment 4-inch Daybreaks are rather the rule than an exception. These are certainly high grade blooms.

Does it pay to grow high grade flowers? I say "yes" with Mr. Rudd, and he hits the nail on the head with his remarks. The large quantity of inferior poor flowers is the greatest impediment in the evolution of carnation culture. These large quantities in the market sold at very little, and many thrown away, cause a depression in the prices of the high grade

flowers, and discourage the growers of such, for to show it does pay we will figure a little. My high grade flowers bring \$3 per 100 and over in the same market the common grade will sell at \$1, and many times less. I will allow the grower of the common grade to cut two flowers to my one, owing to not disbud-ding. Otherwise he would not grow one more flower than I can; the advantage is rather on my side in the stronger and thrifter plants and more continuous blooming, and probably at the end of the season I have from a same size space cut as many flowers as he has. But to return to the first estimation. High grade \$3, common \$1. His production in number is double mine, 1,000 blooms will bring me \$30, his 2,000 \$20. Now make an estimate of the whole crop, say 100,000 and 200,000 blooms, the difference in the return is amazing, and well I can afford to spend a little more in their production. And the difference will be still more when prices get lower or in a glut. I am safe to say when my high grade blooms will bring only \$1 per 100 the common grade grower will probably receive 50 cents and only 25 cents for 100, the other 100 he can consign to the rubbish pile. When in good demand I receive about one-third more, but when depressed and in a glut three-fourths more. Will it pay?

Do not believe that you cannot cultivate your customers up to buying your high grade blooms at a paying price. In our home market we cannot sell any common flowers, people do not want them, they may buy a few less but they want the best. I had my experience in this matter.

I cannot omit here to call attention again to the coming convention and exhibition of the Carnation Society in New York, where the flower market has dimensions second to none on the globe. We certainly can expect to see something extra. How pleasant, how interesting and fruitful are such discussions as of late held in Cincinnati and Chicago. How more so will be a large gathering like the one to be expected in New York, when moved by the right spirit. Let every one who can make it a point to be there, take part in the discussions and deliberations, in the welfare and promotion of our trade.

FRED DORNER.

Rose Notes.

From Carnegie, Pa., Lawrence, Kans., and Holyoke, Mass., come inquiries about grafting, to answer which will necessitate taking up the subject and treating it in a somewhat exhaustive manner, so will make it the subject of my notes for this issue. As a stock on which to work tea or hybrid tea roses, in my opinion the Manetti is by far the best; multiflora suckers badly from the root, and also changes the color of the flower in some cases, while the Canina does not make enough small fibres to suit me. Manetti stocks are seldom offered for sale in this country, probably because there has been little demand for them; there is no reason, however, why they cannot be rooted and grown here as successfully as in Europe. They can be procured from any of the large rose grow-

THE NEW FERN-HOUSE, LINCOLN PARK, CHICAGO.

ers in England and probably in France at reasonable prices.

For grafting purposes the stock should be strictly selected, choosing only the medium sized ones or such as correspond in thickness with the wood to be used in grafting. On arrival they should be potted into 2¼-inch pots, first trimming off any broken or damaged roots, and shortening back those too large to get inside the pot. After potting I prefer to set them in a cool house where a night temperature of 40° can be maintained; this will induce root action, and at the same time discourage any tendency to push out shoots. After about four weeks of this temperature they will show quantities of small white roots, and are then ready for use. Some growers prefer instead of potting up the stocks to graft them at once and layer them in sand until the graft is taken; I have tried this and other methods, but the one I recommend has been by far the most satisfactory.

The next thing in order now will be preparing a place to receive the plants after grafting. The south side bench in a good light house is as good a place as we can have. The first requisite will be heating pipes sufficient to maintain a strong bottom heat; if steam four 1¼ inch pipes will be needed, and must be boxed in tight with matched boards. The bench must be made to accommodate sashes like a

frame, the sashes to be hinged on the back, with enough pitch to the front to carry off all condensation. The sides of bed must be perfectly tight, the joints between the sashes also be perfect, for the least admission of air from the outside will wilt the young grafts and render their taking very improbable. It is important that the plants be as near the glass as possible, and that the sashes be such as to throw a minimum amount of shade. The grafts will not bear any sun, but all light possible is very essential; as a help to secure these conditions I recommend placing the frame on the south bench as suggested above, with the slope of sashes to the north. The bench being completed I would cover with about two inches of sand or fine coal ashes, having first treated the bottom and sides to a thorough lime wash.

Coming to the operation itself, begin by choosing the very best wood obtainable; blind shoots are generally too thin to match the stock; that left after cutting off the flowers is the strongest and in the best possible condition for use. In taking off the wood the foliage must not be damaged or allowed to wilt. A suitable place should be chosen for the work, free from all draughts and convenient to the grafting bed. Necessary appliances will be a flat containing the stocks, an empty one ready for use, both placed convenient

to the operator, a seat rather low, a ball of common cotton string and two good sharp knives. I first make ready a number of grafts by shortening the leaf same as for cuttings, then making a long clean sloping cut at the lower end from half to three-fourths of an inch in length, then take one of the stocks in the left hand, placing the stem between the first and second fingers and with the other knife make a cut of the same size and shape as previously made on the graft; choose one that fits the stock as nearly as possible, place the two cuts together, wind with a piece of string all the length of the joint, not too tight or too often, fasten the end of string, and the operation is completed. It is very important that the grafting be done as near the base of stock as possible so that in planting out the union comes below the surface. The grafted plants must now be transferred to the bed or frame, or whatever we may call it, and after giving the sand a thorough soaking should be very carefully set; there must be no clinging of the leaves together or a bad joint will be the result. It is a good plan to leave a little space, say two inches, all around the inside of the frame. I have always found grafting exceedingly interesting work, and it is generally no task to give them the necessary attention. From now on until they are ready to come out of the frame little labor is required, but they must be watched every hour of the day, and night too; the temperature inside the frame should be kept as near 85° as possible; every morning and evening each sash should be raised and the contents critically examined. If any are dry at the root they must be watered without getting any into the cut; if the foliage is dry it should be sprinkled very lightly; the finest spray imaginable is the right thing. Sprinkle the wood work of frame, watch for any sign of fungus and remove same immediately it is discovered. If enough moisture can be maintained to keep the foliage crisp and fresh without any sprinkling of the same so much the better. As a rule no ventilation will be necessary during the first five or six days; at the end of that time the cuts will begin to callous and unite, when a little air may be introduced. Begin with about 20 minutes, twice a day, and gradually increase until at the end of two weeks the sashes may be left propped up all the time. One week more to harden off and get accustomed to the sun and they may be removed from the frame. By this time they will have made considerable growth, and should be repotted into 3-inch as soon as convenient, aiming always to pot as deep as possible. If the union is covered with soil the string usually rots before it can do any harm, otherwise it must be removed to give room for the swelling of the stem. They may now be treated exactly the same as plants on their own roots, except that any suckers which may come up from the Manetti must be cut off close to the stem as soon as they appear. If treated properly they will grow very rapidly and will require to be planted out or moved into larger pots much quicker than will plants grown from cuttings.

February and March are the best months for grafting; later in the season the sun is too fierce to have the best success. If the wood and stocks are of the best quality and every condition favorable the percentage of loss is very small, in some instances not amounting to 1%; but to anyone who is not prepared to give them all the necessary watchfulness and care I would say "Don't try to experiment, for you may be disappointed." In any case I

would suggest to those interested in the subject that they go slow the first year; try a few of each kind, and if you are thoroughly satisfied you can test it further with confidence, while if with you it proves a failure your loss is light, and disappointment trifling. ROBT. SIMPSON.

Eel-worms and Anthracnose.

D. & B., florists living in Illinois, have sent for examination three rose plants dug up from the benches; same are in a sickly condition and they wish to know what is the trouble. The roots of one of the plants received were all matted together, the result of eel-worm, while the other two were bad cases of anthracnose.

If the three specimens received were fair samples of what are growing in the benches now it will hardly pay D. & B. to spend time and labor trying to restore them to health; it is probable, however, they sent some of the worst specimens to be found. If they wish to experiment I would refer them to an article on eel worms in the issue of January 4, also to Mr. May's article on page 649, issue of January 25. I would say, however, that there is little or no hope of destroying the pest once the plants are attacked by it; inside the root it is out of reach of any application, except such as are powerful enough to destroy the plant itself. I have more faith in very heavy waterings than anything else I have tried.

The main thing for D. & B. to do is take care and procure soil for next season that is free from the pest, and I will repeat here what I have said before, that I have very seldom found any in soil that is low enough to be covered with water at certain seasons of the year, while very often in close proximity, where the land is slightly elevated, and on that account is always comparatively dry and perhaps of a lighter texture they are so numerous as to make it utterly impossible to grow roses in it at all. It is the greatest folly to take cuttings from plants so affected, and it is necessary to keep young stock entirely apart or there may be a continuation of the trouble next winter.

Anthracnose has been described and a remedy given in the AMERICAN FLORIST twice recently, that recommended in the issue of February 1 for the plants of "Aug. S." will answer in this case. The syringing must be kept up continuously until the trouble entirely disappears, and at the first sign of its return the syringe must be brought into use again.

ROBT. SIMPSON.

Eel-worms—Manetti Stocks.

Do eel-worms infest the roots of Manetti stocks? In other words are roses grafted on the Manetti exempt from the pest?

F. E. P.

I do not remember having ever seen Manetti roots affected with eel-worms, but I do not see any reason why they should escape the pest if it is present in the soil any more than roses on their own roots. I have grown carnations, however, for the past three years in soil that contains quantities of them, but the plants are not attacked, and it is just possible, though not probable, that the Manetti may enjoy the same immunity. F. E. P. will be safer if he plants in soil positively free, however.

ROBT. SIMPSON.

Miscellaneous Seasonable Hints.

It is so long a time since I attempted to give any hints that I shall not attempt to

cover lost ground, but will endeavor to remind my friends of some operations that are attracting my attention just now. Some seeds that should be sown now are verbenas; get the best possible strain you hear of. They will by selling time be fine thrifty plants and can be depended on to give satisfaction wherever planted, and that is more than you can say of the cultivated varieties. Sow thinly, for it is well to let the seedlings get a good size and then pot them in a 2-inch pot; remember there is no place like a mild hotbed to make verbenas flourish.

If you have not sown *Centaurea gymnocarpa* do so at once. It is no longer considered a high class bedding plant, but for those who do a general business it is very useful for vases, etc. *Petunia* should be sown about now; don't buy any single strain, buy only the best double. You will always get enough single to more than satisfy you. *Petunia* is a very small seed, and if you attempt to cover the seed you will likely over-do it. Make the surface of the box or pan perfectly even and smooth, and then sprinkle the seed on it; press in the seed with a clean piece of board and then water. Cover the seed with a damp cloth, which you can moisten occasionally till the seeds germinate, but as soon as that takes place remove the cloth. *Petunia* seedlings, if kept too warm and shady, will quickly run up spindling, and as soon as they are showing leaf should be removed to the lightest place in the house where the temperature is about 50° at night.

If you are short of cannas you can increase your stock ad libitum by sowing seed at once. There has been many ways discussed of getting canna seed to start, so I won't enlarge on that, but sow them in a flat of pure sand and cover one-half an inch and place the flat on your hot water or steam pipes. No amount of heat, if accompanied with moisture, will hurt them. Cannas come largely true from seed; accidental crossing is rare. If you sowed or raised one hundred plants from seed of Mme. Crozy you would get about 95 Mme. Crozy and the small remainder (not balance as we erroneously say) would probably be yellow. So if you obtain seed from a good source you will have all acceptable varieties. If you want large cannas start your dormant roots about the middle of this month. Most florists are so crowded for room that they don't give cannas a show till middle of March, and then have to be expeditious about it. We divide the old roots into one good eye and put them in boxes of sand and place on the pipes. They soon make a start at both top and bottom, and then you can pot them into the 4 or 5-inch pots in which they will be sold.

Two very useful plants which are easily raised are *Dracaena indivisa* and *Grevillea robusta*. Get some seed of them and sow now. They will not make plants for this season's use, but will come very useful in the future.

Now about plants. Although it's a little dull just now you have to think about the future, and plants are selling well. Look out for those little cyclamens you sowed in December or later; the great secret in growing good cyclamens is never to let them get a check. To stunt a cyclamen means failure. When they have made one good leaf they should be transplanted into 2-inch pots and put in a light cool house, and carefully watered, viz., when they are dry they want water and when they are only half dry they don't want water. A celebrated carnation man made use of

this expression in my houses a few days ago, "We water our carnations different from most people. We let them get dry and then we give them a good soaking." I cast a glance of irony at him, we trust unobserved, but what rot; who is there successful in our business but what waters his plants exactly on these lines.

To get your main crop of lilies in just right will require a great deal of labor combined with a greater amount of judgment. Easter is this year on the 5th of April, rather early. If on Valentine's Day, the 14th, you can see the buds you are all right, and they will come along in good time, but whether they be late or early you can do wonders in forcing the late ones in a warm house and retarding the early ones in a cool house, but you cannot do this without constant observation.

The next most important plant is the azalea; you can regulate them more easily than lilies. If any show decided symptoms of flowering let them flower, for there is always a good demand, but Easter is the time when they are mostly in demand. Don't forget that the azaleas will stand anything but frost, and don't forget to rub off that leaf growth at the base of the flower, which if allowed to grow will take the precedence and the flower will never develop.

A most important crop for Easter is the hyacinths, tulips, etc. I expect to write later about Easter crop of these, but will remind you now not to bring them in too early. A regular succession of bulbous stuff is easily kept up by bringing in faithfully every week what you need. As the season advances less heat is needed to bring tulips, hyacinths and narcissus into flower and the less heat they have the more satisfactory will be the flowers.

Nobody in particular seems to be an authority on chrysanthemums as an author, and I am not, but now is about time to propagate. Guard against a hot treatment at anytime. 'Mums will strike root anywhere now, while later it is more difficult. Your propagating bench should be so constructed that water will pass quickly through it and then you can root anything.

WM. SCOTT.

New York.

Business for the past few days seems to have fallen off, retrograded as it were, to the dull conditions experienced directly after New Years. Carnations are once more plentiful and consequently cheaper in price. All kinds of bulb stock are in oversupply, especially lily of the valley and tulips. Tulips are not good, but even if they were it is very doubtful if the trade in them would amount to anything, for they have evidently outlived their day in the popular fancy as cut flowers. Roses are fairly abundant in all varieties excepting American Beauty; the latter are bringing prices equally as good as last year at this time. Violets are abundant and have received quite a setback on account of the weather. The only sensation in the flower market is an advertisement by Bloomingdale Bros. in last Sunday's *Herald* in which Brides, Bridesmaids, Morgans, Meteors, etc. are offered at 59 cents per dozen, violets 59 cents per bunch and American Beauty \$2 per dozen, "as good as can be bought elsewhere for \$5 per dozen."

Preparations for the Carnation Society's meeting are well under way and all are looking forward to the great event. Lawrence Hafner has been appointed by the board of trustees of the N. Y. Florists' Club Grand Generalissimo of the floral

decorations on the occasion of the dinner, which by the way is to take place at the Broadway Central Hotel and is to be an event unparalleled in New York horticultural annals. Contributions towards the floral decorations may be sent on February 20 to Lawrence Hafner, in care of John Young, secretary, 51 West 28th street.

Carnation growers in Jersey City and vicinity have been losing a good many plants from what appears to be anthracnose. The plants died off in the field in large numbers, and are going one after another in the houses. The trouble is believed to date back to the cutting bench. J. Harrison has suffered the most and there are numerous large spaces in his benches where the plants have died out, while many of those that remain are partially dead. A peculiar feature seems to be the fact that the flowers being cut from these diseased plants are of as good quality and appearance as those from perfectly healthy plants. Mr. Harrison's white sport from Wm. Scott noted in these columns last season continues satisfactory in every way and he has in it an undoubted acquisition. The flowers are dazzling white and show that peculiar lustrous texture which is so charming in the parent variety. Rose Queen has made a good growth with Mr. Harrison, but is otherwise unsatisfactory. One sees here an old favorite, Hinze's White, which is rarely seen at present. It seems to do very well still. Daybreak, Scott and McGowan are the varieties most largely grown. Mr. Harrison added two new houses during the past season.

C. Peenecker & Sons have also increased their glass area by the addition of two handsome modern houses. Their carnations are in splendid condition. Scott, McGowan and Alaska are the only varieties grown. A long propagating house filled with cuttings rooted and rooting tells the story that Mr. Peenecker has two strings to his bow. At Leach Bros. Van Leeuwen is grown in preference to Tidal Wave. They claim that the flowers are more uniformly perfect and that the striping and discoloration so common in Tidal Wave are absent in this variety. Another favorite here, seldom seen elsewhere, is Emily Pierson. The plants are literally loaded with buds and the houses containing this variety are a wonderful sight. Mr. Leach considers Alaska a decided improvement on McGowan and will grow it in preference hereafter. To fill a certain space in the houses he claims Alaska can be grown in one-third the space occupied by McGowan in the field. The rot has troubled Scott and McGowan considerably with him, and a good many plants of both these varieties have been lost. John Nicol, who is also a large carnation grower in this neighborhood, asserts that he found the best success with McGowan and Scott when grown on dry sandy soil, whereas Daybreak gave best results from heavy land.

J. H. Taylor is sending in some very fancy grades of roses this season. Equal to the best of these are the blooms from Brides now in their sixth year. Mr. Taylor says that he sees no indication of decline in these plants yet. American Beauty in its second year is also a success. Mrs. Pierpont Morgan, Mme. Cusin and Bridesmaid are hard to beat here, and Dean Hole, Mr. Taylor's sport from Testout, is said to be considerably freer and stronger than its parent.

Alex. Burns has been devoting his time exclusively to his greenhouses at Woodside for the past year and the stock shows

the good effects of steady personal attention. He still clings to La France as a profitable rose, and claims to make more money out of Portia than of any other carnation, although Scott, Rose Queen and other varieties are all doing well here. Meteor is particularly good and Mr. Burns disputes the charge that this variety is a poor keeper after being cut. On lilies he will be heard from decisively about Easter time; no finer longiflorum and Harrisii can be found.

Boston.

The annual dinner of the Gardeners' and Florists' Club, which took place at the Thorndike on the evening of January 30, was an unqualified success. Warren Ewell was chairman of the committee, and the arrangements could not possibly have been placed in better hands. The cozy little banquet hall at the Thorndike, the scene of so many merry occasions in the history of the Boston fraternity, never looked prettier. The florists had responded liberally to Mr. Ewell's request for donations, and there was no lack of floral decorations. On the table were seven superb baskets donated by James Comley (camellias), W. E. Doyle, Geo. A. Sutherland, Welch Bros., Norton Bros., Newman & Sons and W. A. Twombly, alternating with araucarias and fern dishes. The mantels and alcoves were banked with plants from Norton Bros., Kenneth Finlayson and Warren Ewell, and over the mirrors were suspended garlands of the beautiful Clematis indivisa contributed by F. L. Harris.

In the absence of President Cotter Vice-president Finlayson took charge of the exercises. On his right sat Mr. F. H. Appleton, president of the Massachusetts Horticultural Society, and on his left Judge C. W. Hoitt, who officiated as toast master. The intellectual feast opened with the reading by the toast master of his commission, with a few remarks including a complimentary allusion to the exceeding good looks of his audience, which prepared the way for a good-natured reception of the quotation from As You Like It, "I must have liberty, withal as large a character as the wind, to blow on whom I please."

President Appleton of the Massachusetts Horticultural Society was the first speaker called upon, and he was accorded a most enthusiastic welcome. He expressed deep interest in the welfare of the club and spoke hopefully of the prospects for a new Horticultural Hall in the near future, which would supply the much needed facilities for plant and flower exhibition. His account of a recent visit to Philadelphia, and description of the new Horticultural Hall in that city, was especially interesting. M. H. Norton and F. L. Harris, who were the next speakers, endorsed all that Mr. Appleton had said in reference to the need of new exhibition halls, and pledged the hearty support of the gardeners and florists in any efforts that might be made for the advancement of horticulture. Judge Hoitt's quotation from Cicero in introducing Mr. Harris was most fitting, "As I approve of a youth that has something of the old man in him, so I am no less pleased with an old man that has something of the youth. He that follows this rule may be old in body, but can never be so in mind."

"When he speaks the air is still and the mute wonder lurketh in men's ears to steal his sweet and honeyed sentences," Henry V, Act 1, was the sentiment with which Wm. Robinson was called upon, and he responded with a series of inter-

esting stories which stirred up much hilarity. Fred Mathieson's speech was very humorous; the cathode rays streamed forth in longitudinal vibrations of good nature from his round face and he was pronounced "all right" in vociferous chorus. James Comley told of his love for flowers and plants and wished he was forty years younger. He declared that it is a mistake to say that the flower trade is over-done; cheap flowers only are over-done. His closing advice was "don't use so much manure, use more brains." Warren Ewell was introduced with "full oft we see cold wisdom waiting on superfluous folly." Warren's summary of market conditions was exceedingly good, and his speech from beginning to end, inimitable. E. M. Wood advocated the organization of a New England Association for the purpose of collecting cultural information and trade statistics, and his suggestions were cordially favored by W. J. Stewart and others. Jackson Dawson's advice to the private gardener was to grow things that nobody else can grow, and to devote less time and attention to florists' cut flower stock. Ed. Hatch on being called upon to speak brought out a substitute in Bob, the Club's ebony mascot, with his banjo, and later on songs were also contributed by Jackson and Chas. J. Dawson. Letters were read from secretaries of various florists' clubs and other prominent gentlemen, regretting their inability to be present.

The meeting of the Massachusetts Horticultural Society on February 1, was, as might be expected, a very large one, the special business being consideration of the proposition to dispose of the Society's property, with a view of moving to a more desirable and convenient location, the building committee having asked for power to sell the present structure provided a fair price could be obtained for it. In the discussion that followed it developed that the site is valued at \$750,000 or \$800,000. Considerable opposition was manifested by some of the older members present, and much sentimental oratory was indulged in, but when after nearly two hours' of talking the vote was taken it was found to be decisively in favor of selling the property, and securing a location in the Copley Square section, where a building equal to the society's needs for the next fifty years might be erected. The membership of the Society is now seven hundred and eighty-five, of whom five hundred and sixty-three are life members.

The exhibition at Horticultural Hall on Saturday, February 1, was unusually extensive for the season. Carnations were a feature. The display attracting greatest attention was a superb collection of carnations numbering nearly one thousand blooms, shown by C. W. Ward. Bridesmaid, Meteor, Storm King, Eldorado, Wm. Scott and others of Mr. Ward's specialties were shown in unprecedented quality, and the two first named were awarded honorable mention. Wm. Nicholson was also on hand with a fine display of carnations. Among the newer varieties here were Crystal, Alaska, Eldorado and White Queen. The latter is a very full white seedling from which Mr. Nicholson expects much. Peter Fisher exhibited his new white seedling Edith Foster again, and it has every appearance of a winner. Seedlings were also shown by A. Rober and H. A. Cook. There was a large showing of violets, both plants and cut blooms, from Alex. McKay, gardener to D. Nevins, and from Winter Bros. Mr. McKay's violets have already a high

reputation and those shown on this occasion were fully up to his record. Among the varieties shown were Farquhar, Marie Louise, Swanley White, Lady H. Campbell, Neapolitan and California. The plants were in 10-inch pots, and were marvels of luxuriance and health. Chinese primroses from W. E. Coburn were fine, and James Comley showed an extensive collection of camellia blooms. Harvard Botanic Garden exhibited a large collection of plants, among which was a grand specimen of *Angræcum sesquipedale*, bearing twenty-five flowers, for which a silver medal was awarded. Bussey Institute was represented by a nice lot of frezias.

At the club meeting on Tuesday evening Mr. Robert Farquhar read a paper on "The Profession of Gardening; what it is and may be." Mr. Farquhar referred to the advances made socially and intellectually by gardeners of the period, which he considered far below the progress made in other professions and contended that a combined effort should be made to raise the standard of the gardener's profession and place it on the plane to which it is justly entitled. The successful gardener, he said, cannot be an ignorant man, he must not only know its practice but its science as well, for he is placed in a position of great responsibility. Incompetent help is costly to an employer at any price, and the employment of such is a direct injury to the profession. In Europe a common garden laborer cannot pose as a gardener successfully, and patient laborious effort is required before proficiency is acquired or acknowledged. The license enjoyed by untrained men in this country is greatly injuring the standing and reputation of the profession in this country. Mr. Farquhar then gave an outline of a scheme which he believed would go far towards remedying existing evils and raising the standard of proficiency and of wages. Briefly stated the plan was to form an extensive organization of gardeners, the management of which should be placed in the hands of a few men of known reputation with committees of five members each at central points, whose duty it should be to examine applicants for situations and award certificates setting forth the degree of attainment displayed, records of all tests to be filed in the secretary's office.

The conclusion of the paper was the signal for a grand tilt and hot shot flew thick and fast. Some favored the speaker's suggestions, others believed there was abundant room in the present organization here for all investigations and reforms without the formation of any more associations. Those who believed that no work whatsoever could be demeaning, applauding the gardener who would milk cow, sift ashes or peel onions rather than be idle or hungry were hotly attacked by those who urged that the true gardener would never forget the dignity of his profession or so drag it in the mire as to perform menial duties at wages which would be rejected by a common laborer with pick and shovel in the sewer. Jackson Dawson, W. A. Manda, D. Guinivan, J. Wheeler, T. Westwood, T. J. Grey and others participated. The result was the appointment of a committee of five to consider the subject and report at the next meeting.

The committee on death of the late C. M. Atkinson presented appropriate resolutions. Messrs. W. A. Manda, P. O'Mara, Prof B. M. Watson, Jr., Wm. Scott, Chas. H. Allen, Edwin Lonsdale and W. R. Smith were reported by the executive committee for honorary membership and

duly elected. There were present W. A. Manda and C. B. Weathered.

Philadelphia.

The February meeting of the Florists' Club held last Tuesday evening was well attended, and everyone present took unusual interest in the proceedings. There was an exhibition of Bridesmaid roses by Messrs. Jos. Heacock, Myers & Samtman and F. Hahman & Son. Each vase contained magnificent blooms, being perfect in every respect; the best exhibit was decided by a vote of the members to be by Messrs. Myers & Samtman; the other two vases received the same number of votes each, showing their general excellence. There were also choice bunches of Annie Lonsdale and Della Fox carnations by Myers & Samtman, and of Maud Dean and Jubilee by Edwin Lonsdale; these latter attracted considerable attention. A little collection of well grown favorites or new varieties or kinds of flowers is very attractive to the average florist and adds considerably to the interest of the meetings.

The chief interest, however, centered in the question of the evening, "Is it advisable to have a tariff on plants?" This was handled admirably by Mr. Craig. He said that he had taken hold of the subject with some fear and hesitancy, as he was afraid the subject might drift into politics, and this he wished particularly to avoid. He wanted the subject considered from a business standpoint only, from the point in which it affected our bread and butter. The principal plants imported were kentias, araucarias and azaleas; others were tried, but did not carry well, and these two classes as well as dormant roses and the bulbous class would be about the bulk of the stock affected if a prohibitive tariff were imposed. In Europe it costs much less to produce stock than it does here. In England the best men are paid but one pound (\$5) per week, and in Belgium the same skilled labor costs but \$3 for the same time. Ghent being able to produce plants much cheaper than England, as a consequence there is talk of a protective duty over there, although England has always boasted of her free trade prosperity. We can't pay our present wages here and grow kentias as cheap as they can be imported; it is out of the question. "It is my firm conviction that it can't be done, and I am ready now, after looking at the question from all sides, to advocate a duty of 40% on all classes of imported stock such as is grown and used in our business. I consider this a fair but not prohibitive duty, and one that would make it profitable for growers to go into the business of raising such stock as is now nearly all imported, and think it would be better to keep the money that is sent abroad at home, where it can be used advantageously in the increasing of the plants and enabling the growers here to fill the demand with home grown stock."

There was a difference of opinion as to whether the azalea could be grown here as well as it is abroad, but Mr. Craig thought it could, and with profit to the grower, the only difference being that of wages, as suitable soil, temperature, etc., could be found here.

Hybrid roses imported so largely could also be grown here. Storrs & Harrison Co. had gone largely into this stock, and a duty such as he had suggested would enable them to fill their orders profitably and with more satisfaction to their customers. Other classes of plants now imported could also be grown here, and

would soon find suitable climates in this vast country if foreign competition was restricted. Even bulbs it was thought by many could be grown in certain sections in this country quite as well as abroad. This duty would also prevent the ruinous auction sales which flood the country with cheap stock, as this class could not carry such a duty and sell. Looking at all the pros and cons of the question, it was Mr. Craig's firm conviction that a duty of 40% would be a good thing for the trade all over the country.

Geo. Watson said he would like to see the duty, as he would get his profit on the duty as well as on the stock imported, and for that reason he was for the increased tariff. Henry Michell said he was on both sides of the fence; he would like to see a duty on seeds, so that the general trade would not import them so largely, yet he did not think he would like to lay out \$40 for every hundred dollars' worth of stock imported, the same as he had to wait sometimes for his bills. He believed it would keep a lot of small men from going into forcing cheap bulbs which never paid them or anybody else.

Mr. Heacock spoke of the change of front of Mr. Craig, who was the chief advocate in having plants put on the free list in the McKinley bill a few years ago, and spoke of the immense establishments Mr. Craig had seen in free England, so much larger than anything here, and also of the immense amount of glass given up to growing luxuries, which were so cheap there that even the poor could buy them. He said protectionists never think of the consumer, only of themselves.

Mr. Westcott was much in favor of a tariff, and after making a dig at the present administration brought down the house by saying he wasn't talking politics. He said the proposed duty would shut out the foreign salesman, who after taking all the orders he could flooded the auction houses with his surplus and ruined the florist's market.

Mr. Craig said in answer to Mr. Heacock that in a measure he could not help himself when he went to Washington in relation to the tariff; he was sent to do this by the Florists' Club, and he wrote out the clause that was inserted in the bill, while his fellow committeemen who met with him went out and had a game of ten pins. The present duty of 10% since inserted is nothing but a tax; it does not prohibit. Messrs. Kennedy, Berry, Bearn, Farson, Kift and others took part in the discussion; a motion to vote on the question was shut off by a motion to adjourn, which prevailed and closed one of the best meetings held for some time. The entertainment committee promise something out of the usual in their line for the next meeting, and it is hoped that there will be a large attendance.

Business is increasing and stock is moving very well at about the same prices as last week's. K.

Chicago.

The market is agreeably stiff this week; in fact there is a marked scarcity in roses. No great quantity is coming in, and the demand is brisker than at any time during the season. Prices run from \$6 to \$8 for Brides and Bridesmaids, Meteors \$8. The quality is as a rule good, and the change to clear cold weather will improve it. The scarcity during the past week is rather surprising, but a good many growers seem off crop. Carnations are much more plentiful than they were; there is a great stock of Tidal Wave in all qualities, but no overstock of white.

Prices run all the way from \$1 to \$2, while Rose Queen stands above all the others at \$3. Emily Pierson and Lizzie Gilbert are now seen, and sell well when good stock. Violets are much easier than they were; some days they are scarce, and some there is a big stock; price \$1 to \$1.25.

In bulb stock matters are about the same as last week. Dutch hyacinths have slackened a little in supply owing to a gap between crops; they sell at 50 to 75 cents a dozen. The lilac and white sorts are the best sellers. There is not a great deal of Von Sion about, but this and the yellow tulips go very slowly. Yellow seems out of favor entirely; buyers demand pink above all other colors. Valley, Harrisii and freesia are about the same as before.

At a recent private exhibition of American drawings in the Auditorium P. J. Hauswirth produced a very pretty decorative effect. The exhibition was held in the banquet hall, the walls on which the pictures were displayed being covered with a cream-white fabric. A slight arrangement of galax leaves on this white ground surrounded the artists' portraits. The main feature was a false ceiling of wild smilax arranged on a level with the frieze. Electric lights above this gave a charming woodland effect, other lights being on the walls only. A few palms were well grouped at various points of vantage, the result being one of artistic simplicity.

Cleveland.

Business of late has been fairly good. There has not been any great rush at any particular time, but the demand had been very even and steady from one cause or another, preventing any serious loss of stock, so that both growers and dealers are about as well satisfied as they can be—which may not be saying a great deal after all. Dutch bulbs are fairly in now and are shown in very good quality, although they do not bring the fancy prices of a few years ago. Among the rest are a few Von Sions that seem to go a little better than hyacinths and tulips, probably owing to the sentimental side that people have for the name "daffodils." Sentiment comes in right handy once in a while. New crop lily of the valley has been in stock for quite a while, and though deficient in foliage has shown a very high percentage of salable flowers. Certainly compared with several batches of storage pips that the writer saw lately, both from the standpoint of quality and profit, the new stock was infinitely preferable. This would also apply to some of both kinds forced as far back as Christmas.

The weather so far this winter has been somewhat in favor of the grower as far as temperature is concerned; cold waves during January at least, have been almost unknown, while the thermometer has hovered almost continually in the vicinity of the freezing point. Last year during January and February it very seldom got away from the zero point, and when it did it usually took the downward direction. As a result, coal bills are favorably affected.

There has been but little fluctuation in prices since the holidays, unless the antics of combination delicatessen and flower stores come under that head. In this case roses were sold at sixty cents per dozen, but in the last year we have become somewhat accustomed to such phenomena and they no longer excite more than passing comment. In other stock, prices have held fairly steady with the ex-

ception of carnations which have shown a slight tendency to drop, although they do not seem to have been over plentiful in general.

The entertainment that took the place of the regular meeting January 28, developed a very good time for everybody. There was a very large attendance and the manner in which everything passed off reflected the greatest credit upon the efficient management of Mr. Bunyard and Mr. Paddock, who had entire charge of the arrangements. Cigars, music, magic, refreshments both solid and liquid all combined to put everybody in a frame of mind to enjoy the "speechifying," in which Judge Dellenbaugh took a star part. The writer knows a fellow though who can fumigate a greenhouse all right, but who tackled his first pipe that night. He knows now how a luckless greenfly must feel about it. Anyhow, everybody had a jolly good time. Those who were there are glad of it, and those who were not, have retired to the seclusion of the potting shed, so that they may have full scope to kick themselves as thoroughly as circumstances justify. A.

San Francisco.

Prices the past week have ruled rather low, especially violets, which are bringing \$1 per dozen bunches. California also have taken a tumble to \$1.50 per dozen. Roses are beginning to get scarce, as the first crop is about over. They are likely to remain so now for several months. Harrisii are now making their appearance and are selling very well at from \$2 to \$2.50 per dozen stems. Good long stemmed American Beauties are also rather scarce. Carnations sell very well at \$2.50 per 100. Some very good Scotts are coming in from Menlo Park, which find a ready sale. Chinese sacred lilies bring about \$1 per 100. Dutch hyacinths are coming in but go rather slow. Good plants in pots bring from \$1.50 to \$2 per dozen, but not a great quantity is sold.

Pansies are seen in the florists' windows now; they retail at 50 cents per dozen plants, Serveau Bros. having especially good ones. This firm has made a specialty of good pansies for several years and have a very fine strain.

Prof. G. J. Hansen gave a very fine lecture on "Native Flora of California" at Cooper's College last week. Quite a large audience was present and the lecture was very complete. Mr. Hansen said that over 1000 varieties of native flowers were to be found growing on the shores of San Francisco Bay. He also explained the different uses to which many of them are being put, especially the eschscholtzia from which opium is now being made.

The rain is still falling since my last notes, and is now decidedly overdone, especially for seed growers. Some of the big onion fields on the lowlands of Santa Clara are entirely under water, and unless it dries up very rapidly an immense acreage will be destroyed or rotted. The same will apply also to cabbage, sweet peas and other seeds.

The program for the "Carnival of Roses" at San Jose in May is complete. This is to be the grandest floral fete ever given in California. The program is a very lengthy and elaborate one.

Some of our florists and importers are in a bad way as regards Japanese bulbs. Large orders were taken in the spring and summer for delivery now. On account of the great cholera scare there is a very strict quarantine on all vessels coming from there now in San Francisco harbor. Some of them have hundreds of

cases of *Lilium longiflorum*, *speciosum*, *rubrum* and *auratum*, which if they lie out in the bay many weeks longer, will be worthless and a dead loss to the owners. There is also a large quantity of cypresses and Japanese maples in quarantine.

METEOR.

Montreal.

The Montreal Gardeners' and Florists' Club held their annual meeting on Monday, the 27th ult. The following officers were elected for the ensuing year: President, John Walsh; first vice-president, George Robinson; second vice-president, Wm. Whiting; secretary, Fred Bennett; treasurer, A. C. Wilshire; assistant secretary, Wm. Wilshire. Executive committee, James McKenna, Walter Wilshire, Joseph Bennett and Jules Betrix. The secretary's report showed the club to be in a very satisfactory condition. The treasurer's report was also very satisfactory, showing a handsome balance on hand. The committee appointed at a previous meeting to secure a charter for the club reported that the matter was well under way and would be complete by the next meeting. The annual dinner took place after the close of the meeting, fifty members sitting down, President Eddy presiding, with the president-elect on his right. After a sumptuous bill of fare was done justice to the business of toastmaking and song singing was taken up, which was continued into the small hours of morning. "The retiring officers" was responded to by Mr. Halliday, "Our sister societies" by Mr. Jos. Bennett, for the Horticultural Society; "The Seed Trade" by Wm. Graham of Wm. Ewing & Co., "The Private Gardeners" by G. Pasco, "The Retail Florists" by A. C. Wilshire, "The Society of American Florists" by James McKenna, who in the course of his remarks suggested that the S. A. F. should be invited to hold the convention of 1897 in Montreal. The suggestion met with general approval by all present. "Our American Cousins" was responded to by Mr. Wm. Cook of Plattsburgh, N. Y., an old Montrealean. Speeches were also made by the president, the president elect Walsh, Geo. Robinson, John Perrin and several press representatives.

Some capital songs were given by Wm. Wilshire, A. Pinetteau, Frank Bennett and others. Mr. Graham contributed a couple of good songs and recited a short poetical speech, which was delivered at a chrysanthemum show in Ireland last fall, which was thought very good. Altogether it was the general opinion that the ninth annual dinner was a grand success and the best we have had. BEAVER.

Washington.

Violets have been unusually scarce for the past ten days; last week they could scarcely be had, and what few there were were poor; but are coming in a little better this week. Roses too were scarce, but will be plentiful with a few days' sunshine. This season Meteors have been unusually dark with all our growers, only a small percentage of them being salable. No one can account for this defect, as the plants are apparently in a healthy condition.

Gude Bros. have had a fine display of good white, pink, yellow and red tulips since January 20; they are in fine condition, perfect flowers, stems 12 inches long. They are usually the first to bring in home grown bulbous stuff. Azaleas in flower are in demand, the prevailing price being from \$1.50 to \$2 a plant. Large plants

bring from \$4 to \$5; the smaller ones are more in demand. Roses are retailing from \$1 to \$5 per dozen, \$2 and \$3 being the prevailing price. A good many *Harrisii* are on the market, bringing \$3 per dozen. Callas are plentiful, but not in great demand, retailing for 25 cents each.

REYNOLDS.

Rochester, N. Y.

The annual meeting of the Western New York Horticultural Society was held here on the 22nd and 23rd of January and showed a very large attendance from all parts of the states. President W. C. Barry's opening address was very interesting to all nurserymen and fruit growers, and the many essays and reports on different topics during the session were appreciated by all. It is to be regretted that this society does not pay more attention to floriculture, although every year the president appoints a committee on flowers and greenhouse plants to report in the next meeting, such reports are very meagre, while exhaustive essays on every other subject are forthcoming, followed by long discussions which to some of us seem, at times, rather tiresome and in many respects superfluous.

The E. R. Fry Floral Company, which was incorporated with a capital stock of \$2,000 last June (some time after the assignment of Mr. Fry), in the annual report as published in the papers shows assets to the amount of \$1,414.17 and debts amounting to \$1,107.93. The officers of the company are: President, secretary and treasurer pro tem, Miss Anna I. Rockfellow; vice-president, Fred Wells.

PROFITABLE SWEET PEAS.

FROM careful personal inspection of all the new and old varieties in the famous pea growing districts in California, and from actual selling qualities shown in the San Francisco Flower Market—the largest in the world for this flower—we find the following seven kinds, for size, stems, prolific habits and other most desirable qualities unequalled. They comprise the leading salable clear colors which are always appreciated. Fill seven vases each with 100 sprays of these, and set them in a row in your window, and you need fear no competition in your trade on this flower.

BLUSHING BEAUTY, clear Daybreak pink

HER MAJESTY, pure solid rose.

FIREFLY, bright fiery scarlet.

Tremont street, Boston, and 160 Fifth
avenue, New York.

THE ANNUAL REPORT of W. S. Egerton,
Superintendent of the Parks of Albany,
has been received. It gives an interesting
account of the operations of construction
and maintenance of the several parks in
the city. Work on the reservation known
as Beaver Park has progressed favorably,
and when completed this will be an im-
portant addition to the public domain.

AMONG CATALOGUES recently received
by us special mention is due that of John-
son & Stokes, Philadelphia, for their use
of the new illustrative process by which
objects are photographed in colors directly
from the specimens. The beauty and
fidelity to nature thus produced render
the process of extremely great value, and
though yet in its infancy it promises to
revolutionize our present systems of color
printing. Messrs. Johnson & Stokes are
also to be congratulated on their use of
truthful half-tones for their black and
white illustrations.

I GROW as fine a Collection of
DAHLIAS

as it possible to obtain, of both old and new
varieties. If you want a choice collection for
a special purpose, I have studied your busi-
ness and can give you varieties suitable to
your purpose.

@ke Seed @rade.

AMERICAN SEED TRADE ASSOCIATION.

S. E. BRIGGS, Pres.; T. W. WOOD, 1st Vice-Pres.; ALEX. RODGERS, 2nd Vice-Pres.; A. L. DON, 114 Chambers St., New York, Sec'y and Treas. The fourteenth annual meeting will be held at Niagara Falls, N. Y., June 9 to 11, 1896.

C. P. BRASLAN is in Omaha.

C. C. MORSE & Co. of Santa Clara have incorporated their business. The capital stock is placed at \$200,000, divided into 2,000 shares, fully paid up. The directors are C. C. Morse, Lester L. Morse, B. W. Morse, M. J. Morse and Eva H. Morse.

THE 1896 SEED catalogues are probably the handsomest and best ever issued—this in the face of all the complaints of hard times and low prices. Has each one expected his neighbor to weaken, and therefore made his own best efforts to improve?

Seed Beans in Ventura County, Cal.

It is estimated that there are over 125 varieties of beans grown in this county. The majority being for eastern seed houses. A close estimate based on warehouse reports places the output of seed beans for the season of 1895 at 750 tons, valued at \$60 per ton. This branch of the bean industry is growing rapidly.

Still Anxious for Seeds.

WASHINGTON, D. C., Jan. 29.—The House Committee on Agriculture to-day finished the bill making appropriations for the support of the Agricultural Department for the fiscal year 1897. The total amount carried by the bill is \$3,158,392, as against \$3,303,750 appropriated for the present fiscal year. The \$3,300,000 carried by last year's bill for the purchase and distribution of valuable seeds, but which was unexpended by Secretary Morton, is again appropriated, the sentiment of the committee apparently being in favor of the continuation of the practice that prevailed for so many years.—*Chicago Tribune*, Jan. 30.

Calla Lilies.

Noting some questions about these plants in the FLORIST would say that one plan is to plant them out in a center bed 30x8. They are never moved and bloom all the year round. At Easter last year the bed was a mass of bloom, all selling well. W. J.

Canada.

THE WORCESTER COUNTY Horticultural Society, Worcester, Mass., has issued its schedule of premiums for 1896. The usual series of exhibitions will be held during the season.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—By first-class, all-round florist, good propagator, American, good references. I. P. HERSEY, Amesbury, Mass.

SITUATION WANTED—By a florist on private place; good cut flower and bedding plant grower. TEMPERATE, care American Florist.

ROOTED CARNATION CUTTINGS.

If you want to be successful in growing good flowers that will bring paying prices get your cuttings from prize winners. Our blooms are bringing the highest prices and we have been unable to supply the demand. We received a gold medal at the Atlanta flower show for best collection and all the first premiums on the schedule (7) at the same show; four first premiums at the Madison Square Garden show, New York, where our flowers came in competition with those from the best growers in the country; likewise in Baltimore and Cincinnati.

We can fill orders for 100 or 50,000 of all the best varieties up to date and guaranteed free from rust, fine, vigorous, well-rooted cuttings.

Let us know your wants and amounts and we will give you prices which we believe will be satisfactory for high class plants.

Be careful in selecting your stock as this is the foundation for either success or failure.

Send for price list.

FRANKFORT, IND.—Mr. Henry Kuntz, the florist, died January 29.

SOUTH CHARLESTON, O.—C. S. Battin is building a carnation house 31x20.

NORTHPORT, N. Y.—T. H. Cross has built one new house during the past season.

SPRINGVILLE, N. Y.—Geo. Stafflinger has put up one new house 110x16, also a dwelling adjoining the new greenhouse.

WORCESTER, MASS.—W. B. Warner, of West Boylston has opened a florists' store at 301 Main street, this city. The store will be in charge of Mrs. Warner.

SALAMANCA, N. Y.—The Wildwood Cemetery Association has built one rose house 20x75 feet, natural gas being the fuel. The place is rented by E. H. Sommerfeld.

ROCHESTER, N. Y.—Geo. T. Cooper, a market gardener of this city, committed suicide by hanging at his home on January 28. He was prosperous in business, but had been in poor health of late.

PAWTUCKET, R. I.—Mr. S. J. Reuter of Westerly has leased the extensive greenhouses of Richard Harrison on the Pawtucket Pike. The plant includes a dozen large houses recently erected, and thoroughly equipped.

DENVER, COLO.—The Lewis Commission Co. have started in as wholesale florists at 1709 Curtis street. This will be the first wholesale cut flower commission house in this city. The concern will also handle florists' supplies.

ALLIANCE, O.—F. Zimmerman has added a house 20x40 for growing early vegetables. Leroy L. Lamborn is building 2 rose house 20x150. He is operating a retail cut-flower store in Canton, O., supplying it from the greenhouse here.

WHITE PLAINS, N. Y.—The firm of Schmitt Bros. has dissolved and the business will now be carried on under the name of P. A. Schmitt, florist and nurseryman. Mr. Schmitt is now building five houses on Barker avenue, 15x60, with steam heating. Trade is very fair; cut flowers are in fair demand.

SPRINGFIELD, MASS.—The Hampden Horticultural Society and the Amateur Horticultural Society, both very large organizations, and for some time past rivals in the horticultural field, are likely to be united into one organization. Prominent members of both associations are deeply interested in the plans for a union of the two societies.

6,000 BEGONIA NIVEA,
AT REDUCED PRICES.

The New Everblooming Apple Blossom Begonia. We have a large stock of this grand winter blooming and summer bedding plant; it being covered with elegant panicles the whole year round, making it a valuable market plant. In color it is of a delicate pink when in bud, expanding through lighter shades to snowy whiteness when in full flower, giving it an apple-blossom appearance, that is unique, and what the ladies call "just lovely."

In order to make room, and to place in reach of all, we offer 6,000 plants only at reduced rates if ordered before March 1st, 1912, after which date, prices will be advanced. It is a most vigorous grower, propagates easily, and has come to stay. The plants are well branched, well established and first-class in all respects, and sure to give satisfaction. Up to date florists should secure some of this stock for their floral work.

We guarantee safe arrival in good condition, and extras added to all orders of one dollar and upwards by express. Cash with the order. 50 plants at 100 rates.

WILLIAMS & SONS CO., Batavia, Ill.

News Notes.

ANDOVER, O.—Mrs. R. A. Pardec has added one new house 16x50.

KIRKSVILLE, Mo.—Mrs. B. F. Eades put up one new house last season, 18x37.

RONKS, PA.—Elmer J. Weaver is going to add shortly four new houses 96x9½.

KITTANING, PA.—E. A. Brodhead has built one new house, ¾-span, size 20x65.

NEW LONDON, O.—W. D. Chase is erecting one new house. A. W. Dunks intends to put up one house next fall.

SWARTHMORE, PA.—Fire recently destroyed the office of the Swarthmore Nursery Co.; loss partly covered by insurance.

WHEATLAND MILLS, PA.—H. B. Weaver & Bro. have started in business here; they will make a specialty of rooted cuttings.

FERTILITY, PA.—Martin H. Weaver has started in business here with about 7,000 feet of glass; he will grow violets and carnations.

ITHACA, N. Y.—The Bool Co. has erected a carnation house 18x76, rose house same dimensions, and two violet houses 6x76, making their total 20,000 feet.

NATRONA, PA.—G. A. McWilliams has built two new greenhouses, one 116 feet long, heated with hot water, and a propagating house about 30 feet long. J. E. Harrison has sold his nursery and removed to Springdale, Pa., and is now agent for several nursery firms.

AKRON, O.—P. Flanigan & Son started a retail store on Main street about three months ago, but have now moved to 139 Howard street. Gus Schmitt of Park Place, private gardener for Louis Miller for the last four years, since last fall has opened the greenhouse for commercial purposes.

GALION, O.—Professor A. D. Selby of the Ohio Experiment Station at Wooster, O., visited this place February 1 to gain more accurate information in regard to the disease on lettuce which threatens the lettuce growing industry in this locality. He is very enthusiastic in regard to sub-irrigation for roses which the station florist has tried and the results have been very satisfactory. Cut flower trade very dull.

KINSEY, OHIO.—There seems to be an improvement in the demand for some kinds of nursery stock, especially is this the case as to plum trees. The good crop of plums the past season has stimulated the fruit growers to an increased planting. Both European and Japan varieties are in demand. The trade in apples has also increased to some extent. Peaches are not so rapid just yet, but we believe if the peach orchards go through February and March uninjured there will still be a heavy demand for peach trees.

HUDSON, N. Y.—R. W. Allen has sold his nursery to the City of Hudson for cemetery purposes, and has purchased a lot on Green street, Hudson, N. Y., removing all his greenhouses and making some additions. He has now 12,000 feet of glass and will give up the nursery business and carry on the florist business only. His new place is just completed; the whole place including office and store are heated by hot water. The houses are well built, eight in number, potting and packing sheds, cellar for cut flowers and everything suitable for retail trade.

ROSES, TREES, BULBS, PLANTS.

200,000 Strong, hardy, nursery grown Roses.
150,000 Pot Roses, Teas, Chinas, Bourbon, etc.

News Notes.

MUMFORD, N. Y.—J. F. Ward has added a new violet house, 10x80.

BROOKLYN, N. Y.—Richard Shannon, near Greenwood Cemetery, has erected three new houses.

FRANKLIN, PA.—Mr. P. Heilig who was a private gardener, has bought the plant houses of the assigned estate of J. S. McGarry, which have an area of about 3 000 feet.

MADISON, Wis.—J. E. Williams added about 3 000 feet of glass during the past season. F. W. Brezice is out of the florist trade, and A. N. Ames has given up the seed business. Cut flower trade is improving.

WEST GROVE, PA.—John McLimans has leased the greenhouses owned by H. M. Jackson. He will grow carnations and tomatoes for the Philadelphia market. Truman Cooper & Bro. have purchased the establishment formerly owned by James Lovett.

JAMESTOWN, N. Y.—A. L. Thrall made an addition to his glass last summer. Ross & Hetherington, who opened a store at 115 Main street last summer, have no glass, but confine themselves to a retail business. S. S. Butterfield moved to 106 Main street January 1.

AMESBURY, MASS.—Mrs. Fred. Hibbs had the contents of two houses frozen during the recent cold snap and has decided to close the houses. Ira P. Hersey has sold his cut flower business to John F. Johnson, a bookseller from whom Mr. Hersey leased the space he formerly occupied.

GLENS FALLS, N. Y.—A. J. Binley, who opened a florist and seed store at 1 Monument Square last spring, reports business as good and promise of a greater amount of business in seeds the coming season. He will add about 800 feet of glass next summer. H. L. Crandell & Co. a short time ago made up a new design in the shape of a rug, over which stood the casket, it was composed of about 1,200 roses.

ASHEVILLE, N. C.—The Idlewild Floral Co., are building a rose house 25x100 feet, to be heated with hot water. They also intend to build a plant house 12x95 feet in the spring. This gives them something over 13,000 square feet of glass. E. E. Brown of the Brownhurst Greenhouses has built a small violet house, about 10x50 feet. C. Zbinden has leased the Victoria Greenhouses formerly occupied by J. M. Patton and has built a show house 16x75. Trade for January was 25 per cent. better than for January 1895. Violets are just coming in, they have been growing finely all winter but the flowers have failed to materialize until now.

CYPRESS
GREENHOUSE MATERIAL OF ANY DESCRIPTION

JOHN C. MONINGER Co.
297 to 307 HAWTHORNE AV.
CHICAGO, ILL.

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafters, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

News notes	748, 750

WE very much regret to have to announce a serious accident to President Wm. Scott. He had the misfortune to slip on the icy sidewalk last Tuesday evening when leaving the greenhouses, breaking his left leg, and is now confined to his room. His hosts of friends in the trade will warmly sympathize with him and wish him a speedy and complete recovery. The accident explains the incompleteness of the miscellaneous seasonable hints from Mr. Scott's pen in this issue.

Carnation Spot.

Enclosed find sample of carnation Lizzie McGowan, which seems to be affected with rust or some disease. Will you kindly give us your opinion as to what it is and the cure; the other kinds are not affected and in the same house.

B. & Co.

This is not rust, but appears to be what is commonly called the spot. The copper solution may be effective; and give some nourishment in the form of liquid manure, not too strong, but often. The twisting of stem and leaf most always indicates an impoverished condition, or unsuitable soil.

FRED DORNER.

Rust.

If carnation rust has once got a good lodging on carnations, would the syringing with the solution help any yet? If so please give formula of the mixture.

J. U. K.

No, if the rust has one got a good lodging the solution will kill some of the spores, but it is unable to effect a radical cure. But, disease or no disease, it is well to apply the solution as a preventive for fungus of all kinds. The copper solution as we use it is: One pound sulphate of copper, dissolved in one quart of ammonia in a stone jar, or more ammonia when not sufficient to dissolve the copper. Take one pint of this solution mixed with one more quart of ammonia in one barrel of water and syringe. The solution can be kept in the jar well covered ready for use.

FRED DORNER.

Rust and Fairy Ring.

What will kill the rust?

I have also what Prof. Kinney of the R. I. Experimental Station calls "fairy ring" that seems to me to be even worse than the rust. What can you recommend?

N. D. P.

The ammoniacal solutions have all proved insufficient for a radical cure. They will help to keep the rust in check, by killing part of the spores, but not more. Of late I have watched some experiments made by Mr. Hill of Richmond, Ind., with arsenic. His formula is one pound of dry arsenic to one barrel of water. At my visit there in December he showed me

some badly infected plants of Uncle John under treatment, and at my last visit, the 6th of February, I found these plants free from rust. I seems the arsenic follows the rust to the inner tissues of the leaves and kills effectually. Of course the leaf will have to go with it, and dries up, but there are no bad effects on the healthy parts of the plants. The plants in question have to all appearance taken a new start to grow. Mr. Hill told me, as arsenic is rather hard to dissolve, a chemical solution made by a druggist and then used with the water as recommended above, may prove still more effectual. If further experiments will prove as effectual as the one I noticed, and as Mr. Hill thinks it will do, there is hope for an extermination of the rust.

I have not any experience with fairy ring; hardly know what it is. As it is a fungus I suppose it can be reached with some ammoniacal mixture, for instance the copper solution. The carnation has so many enemies among the fungi, and it is always good to have some sulphur on the heating pipes, as it is used in rose houses for mildew. It will not effect an immediate cure, but makes it very congenial for fungus to grow.

FRED DORNER.

Under Glass in Summer—Pot Plants.

I was very much interested in the carnation discussion in the FLORIST of February 1. There are many valuable points there, and that number has been laid aside for careful study and reference. Mr. Dorner's article in same number is, as usual, very instructive.

His experience, however, does not agree with some tests of growing under glass during summer here, as the finest Buttercups I have seen this season were grown in the house all summer. There is simply no comparison whatever with field grown plants in the same bench.

I think that light is wanted on the method of growing carnations in pots during summer either inside or out. Does it pay? Is the cost of pots, labor, etc., compensated for by the lessened check in housing? I do not recollect seeing these points touched on in the FLORIST. Some seedlings in 6-inch pots plunged in ashes in June and housed in early October have made a remarkable growth for us.

Northbrook, Pa. C. P. BARNARD.

SANDUSKY is the name of a new seedling carnation originating with E. Hall & Son, Clyde, Ohio, of which we have received blooms. It impresses us as a most attractive flower. It is variegated, the ground being pearly flesh white, with a border of carmine flakes from $\frac{1}{4}$ to $\frac{1}{2}$ inch deep. The border is distinct, yet without any artificial primness, size and texture of bloom, and stem is up to standard and the variety seems to possess real merit.

Eel-worms.

It is very much like a school boy attempting to correct a college president when I attempt to correct Mr. May. Please overlook my audacity. But like the school boy who bears the bigger boy above him in the class give the wrong answer and with upraised hand proceeds to tell what *he* knows (or thinks he knows), I wish to say a word or two about nematoids or eel-worms. That they often destroy rose bushes, by causing club root, there is no doubt. That they infest many other plants is also true; that they may sometimes be present on clover roots I do not deny. But when Mr. May repeatedly tells us that the "small round lumps or knob like appendages" on the roots of clover, "one and all contain eel-worms," I take exception.

On the roots of every healthy plant of any species of the leguminosæ family may be found these nodules or swellings to a greater or less extent. On clover roots, however, they are especially abundant. On roots of the *Lathyrus sylvestris* I have observed them as large as sweet pea seeds. In every case they are an indication of *health* and *not* disease, and are absolutely necessary for the full development of the plants. They are caused by bacteria which enable the clover and similar plants to assimilate a portion of the free nitrogen of the air.

This discovery is due to Hellriegel, a noted German chemist and is of comparatively recent date. Not a winter passes but some student in bacteriology in the Agricultural College here repeats the experiment outlined by Hellriegel, to prove that the presence of these bacteria is necessary for the full development of clover plants. A quantity of coarse quartz sand is sterilized and freed from all organic matter by burning and afterwards washing with acids which in turn are displaced by nitrogen-free water. A number of 6-inch flower pots, previously sterilized, are then filled with the sterile sand and in each several sterilized clover seeds are planted. As the plants grow they are occasionally watered with a nutritive solution containing all the elements necessary to plant growth, *except nitrogen*. A few days after germination one-half the pots are supplied with a small quantity of water, in which has been washed some soil from a cloverfield. All are then treated as before and in a few weeks, if the work has been carefully done, the results are marvelous. The plants which were kept free from the nutritive bacteria are puny, yellow and undeveloped, while those supplied were healthy and normally developed, including the nodules or swellings on the roots. The roots of the former are free from these swellings.

FREDERIC CRANFIELD.

Wisconsin Exp. Sta., Madison, Wis.

I do not wish to be presumptuous by calling attention to what I consider an error in the article entitled "Eel-worms affecting roses," in the *FLORIST* of January 25.

Although my views were published in a former issue in regard to the same matter,

I will attempt to repeat them, as I believe the truth should be known.

Not wishing to question Mr. May's knowledge in regard to eel-worms on roses, I think he errs in the clover matter, and wish to say through your valuable journal that if he can find "three" out of all the normally matured clover plants extant without root galls it will be phenomenal. Moreover I wish to ask how many of these clover galls were discovered containing eel-worms? Although the worms may have been found associated with or in their proximity in the soil, they were *not* formed by those nematodes in the normal clover roots.

Galls grow on all the leguminosæ, are nutritive tubercles, are essential to the normal development of the plant and found containing numbers of vibratory bacteria. A case of plant symbiosis in which the consortium is essential for the extraction of free oxygen from the atmosphere, for the nourishment of the plant.

But eel-worm galls are not necessary for the natural growth of the rose; quite the contrary. This worm I have frequently found in manures and soils, and may safely say they are the greatest pest we have to contend with, and are now using air slacked lime on the rose benches, thereby hoping to make an uncongenial soil for them.

A. J. PENNOCK.

Lansdowne, Pa.

Diseased Roses.

"A reader from Central Illinois" sends specimens of diseased roses and wishes to know what ails them, also what may have caused the sickness of his plants.

The soil sent is evidently of good quality, and such as might reasonably be expected to produce plants and flowers of good quality. The percentage of manure is probably too large, but we must look elsewhere for the cause of the disease. The letter states that the plants did well after planting in the benches, until the first spell of real cold weather, when many or nearly all began to shed their leaves and die down from the top downwards, that he then cut off the dead tips and added two or three inches more soil, gave two or three applications of liquid manure, but the plants failed to recover. Some made a weak spindly growth and this also died down. After this a top dressing of dry nitrate of soda was given, but everything done only seemed to aggravate the trouble. He further says that the house once got almost cold enough to freeze. From the foregoing I concluded that the trouble was caused by the low night temperature. The warm sunny days in the fall when our roses are growing luxuriantly are sometimes followed by very cool nights which if our plants are left to chance, stops the flow of sap, and gives them the "grippe" or shall I say the "shakes." If the ventilators are closed on cold nights, and no artificial heat is applied, it very frequently happens that the dampness of the house causes a dew to form on the foliage, and we find in the morning the leaves are all beautifully fringed with sparkling drops of water, very pretty, but very disastrous often to our poor plants. One night of this may not seriously injure them, but if the dose is repeated, it almost invariably happens that the young foliage suffers and drops off. This trouble can be prevented by a little fire heat, or by leaving the ventilators a few inches open all night.

When this happened to the plants in question, they should have been kept a little drier at the root, and a little cooler during the day for two or three weeks,

and then if the leafless tips had been cut off, the bad leaves all cleaned away and the surface of the soil stirred the probability is that new good growth would have been made, and in a short time the plants would have regained their normal condition. The addition of more soil was a bad move, the application of manure water doubtless a worse one, because the root action having suffered such a severe check, there was more plant food available in the soil than the plants could make use of, and any crowding in that direction only made matters worse. The plants received were too sick to pay for any codling whatever, the cheapest and best thing to do with such I think is to throw them out with all possible haste and use the space for something else. A crop of radishes and lettuce would pay better than diseased roses and be much more satisfactory.

The insects sent proved to be the common centipede, a comparatively harmless little fellow, but if it is not wanted can be quickly dispatched by a dose of wood ashes, soot or lime. ROBT. SIMPSON.

Early Chrysanthemums.

When should the first batch of early blooming chrysanthemums be put in the propagating bench (for our own flowering) to obtain the best results?

When should our stock plants be started into growth?

Would it be well to feed the stock plants before taking cuttings?

SUBSCRIBER.

To secure good blooms as early as possible, would advise early planting, not later than June 15. Strong cuttings will be sufficiently established for planting in about six to eight weeks from the time they are inserted in the cutting bench, so April 15 to May 1 will be about the right time to take them.

The time for starting stock-plants into growth will depend upon their condition, and the variety to be grown. Some make cuttings quickly while others are very slow, but if the stock is in fair condition they ought to make good cuttings in four weeks.

It is unnecessary to feed stock-plants although there would be no harm in so doing and possibly some benefit might be derived. Feeding is sometimes resorted to when the stock becomes inactive and do not make the growth desired. When such conditions exist Aqua Ammonia used at the rate of four (4) ounce to forty (40) gallons of water, will encourage strong growth quicker than anything we have tried. These proportions are for the FFF grade which contains about 10% ammonium.

ELMER D. SMITH.

The Florist Trade in St. Petersburg.

The accompanying engravings have been kindly sent us by Mr. M. Gebhardt, who is now in Russia, and show various details of the florist business of H. F. Eilers. Mr. Gebhardt writes that he finds

GREENHOUSES IN ST. PETERSBURG.

the trade on a much higher plane in Russia than he expected. He finds the window displays in florists' in St. Petersburg are as fine as any he saw in Paris, New York or Chicago.

The principal stores in St. Petersburg are one controlled by Rempen & Son, two by Freundlich, three by Gerstner and seven by his present employer, H. F. Eilers. The latter two are the youngest in the trade, Gerstner starting some ten years and Eilers twenty-six years ago.

Our first three illustrations show different houses in the greenhouse establishment belonging to Mr. Eilers; the lower one showing the older part of the establishment and the upper ones the more modern houses. The central one shows the rosarium, which is 40x160 feet and contains 5,000 roses of different sorts.

The large illustration shows one of the rose forcing houses which certainly presents a very strange appearance to American eyes. It seems that the climate of St. Petersburg is not at all adapted to own root roses, and to meet with success grafted plants must be used. The picture in question shows one of Mr. Eilers'

houses, the middle and back bench of which is planted with Mrs. Bosanquet; the plants were benched in 1884 and have been forced regularly every year. The plants shown in the picture were cut back September 12, 1895, and the first heat for the season was given October 1, which was 8° to 10° Reamur. Later on the heat was 10° to 14° Reamur. The plants were in full bloom December 15 and the last of the crop was cut in January. The photograph was taken October 15, 1895.

The upper one of the last two pictures shows one of Mr. Eilers' stores in the city and the lower one gives a view in his large conservatory.

Mr. Gebhardt states that the shortest days in St. Petersburg are five hours and fifty minutes from sunrise to sunset, but that the working time in the greenhouses is from 5 or 6 in the morning till 8 in the evening and that very often work is done in the greenhouses by lamp light. He says that the gardeners there examine the pictures in the AMERICAN FLORIST with much interest, as they have before heard very little about American floriculture, the only information they have had com-

ing indirectly to them through the foreign horticultural publications, especially those of Germany, and naturally details have been very meagre.

He says that Mr. Eilers came to St. Petersburg in 1863 by steamboat from Stettin with not more than 40 copecks in his pocket. He found a position with a Russian prince who hired two gardeners at 25 rubles each per month, one for his place in St. Petersburg and another for an estate near Moscow. He left the two to decide which would go to Moscow and which would remain in St. Petersburg. They determined the matter by lots and it was Mr. Eilers' fortune to remain in St. Petersburg. Mr. Eilers is now a millionaire, while the other gardener is still at his old place at a very moderate salary.

Mr. Eilers has remarked that he himself is astonished at the progress he has made from his poor start in a basement where he sold flowers which he picked up and begged from the private gardeners around the capital. Even with his present large range of glass he cannot himself raise all he sells and he takes the product of several large growers near the city and also buys heavily from Italy, the south of France and Germany during the coldest and darkest months of the year.

He uses the hot water system of heating in the greenhouses. The photographs show very well the construction. Mr. Eilers tried slate and brick in the bottom of his benches but returned to wood again. He finds the plants do not do well on a slate or brick bottom, as the latter seems to be too cold.

The roses are grafted on *Rosa canina*. Each year the soil is removed from around the roots, so far as this can be done without disturbing the plant, and new rich loam added and before the plants are started every single stem and branch is brushed and washed with soap and tobacco water.

Mr. Gebhardt writes that the florists of America are exceedingly fortunate in having such excellent trade papers which quickly disseminate information of any advance in cultural methods and devices for accomplishing work with the least effort. He says the papers issued in Europe are poorly equipped, use very few illustrations and their notes are taken mainly from foreign papers or written by foreigners, mainly Germans, who have adopted Russia as their home and have become familiar with the Russian language.

He says that trade was excellent in St. Petersburg both at Christmas and New Years. On those occasions he had a place behind the counter in one of Mr. Eilers large stores and was amazed at the manner in which the money flowed into the till. One day the receipts exceeded 4,000 rubles. The simplest arrangement of flowers sold for 2 rubles but there were many that brought 50 and 100 rubles each. The finest basket cost 200 rubles. Mr. Gebhardt promises to have photographs taken of a number of interesting floral arrangements as prepared in St. Petersburg and send to us that our readers may see the Russian styles of floral arrangement.

He said that while we had a green Christmas here, in St. Petersburg the whole country was ice and snow for eight weeks preceding and the different arms of the river Neva, on the borders of which the capital is situated, formed a solid bridge strong enough not only for people but for wagons and tramways. He says that the weather is often very cold, but there are frequent violent changes.

On January 6 there was a great festival, call The Holy Three Kings, and the baptising of the Neva. In front of the Winter Palace on the English quay a pavilion had been erected and before it a hole cut in the ice so the dark water of the sixty feet deep Neva was visible. Here the Czar and Czarina attended while the head of the orthodox church preached a sermon. The water of the river was blest, the idea being that it carries the virtue of this religious ceremony to every quarter of the earth, the river Neva connecting with the Bay of Finland, thence to the Baltic Sea and Atlantic Ocean. After the ceremony the people are admitted and every one who wishes fills a bottle with the holy water which is carefully kept till the following year. It is expected to preserve the possessor from any sort of sickness.

Mr. Gebhardt expects to travel from St. Petersburg to Moscow in the spring and will take photographs of anything of interest along the route, which he will send to the AMERICAN FLORIST.

Rose and Carnation Houses.

We are getting ready to extend our range by building six houses, each 100 feet long; two 18 feet 6 inches and four 10 feet wide. The wide houses will be used for roses and the others for carnations, etc. The question is whether we shall run them east and west, with wide houses three-quarter span or north and south, even span. We have the space to run them all east and west, but we begrudge it.

We would like to know whether in your opinion, the arguments in favor of the east and west three-quarter span house are so great as to over-balance the argument of space occupied by the necessity of separating the houses. If the houses were run east and west and the north wall of the 18 feet 6 inches houses were 8 feet high, with the south wall 4 feet what distance should separate them? If the 10 foot houses had 4 foot walls what distance should separate them?

If the houses were all run north and south what should be the depth of the sash bar used if glass 16x24 were to go in? We are in hope you may find it convenient to give us this information with as little delay as possible as we wish to perfect our plans and gather our material for an early start. SANDUSKY.

The above important questions have been sent me to answer, and in doing so I shall suggest something a little different from either plan after I have answered the questions. First I would say, as the houses are for roses and carnations, let them all be 18 feet 6 inches or 19 feet wide; instead of four houses 10 feet wide for carnations build two houses each 20 feet wide. The two will be cheaper to build than the four narrow houses, will hold about as many plants, and all carnation authorities agree that the plants do better in a large airy house.

All growers of flowers, more particularly roses and carnations, agree that it is of the first importance that the houses run east and west, or what is still better, a few points northeast and southwest. If these houses were for general plant stock or for smilax or palms, north and south is good enough, but for roses and carnations don't make any mistake; let them be broad side on to the south or a little east of south.

If you build the old regulation three-quarter span with long-span-to-the-south 8 foot wall on the north and 4½ foot wall on the south, you would have to keep

away a distance of 12 feet between houses, or the southerly house would shade the front bench of the next house on the north, and 14 feet apart would be better than 12, for you must not reckon about the sun shining over the ridge pole of the south house at 12 o'clock on the shortest day, but it should shine over it if it shines at all at 9 a. m. If an equal span or nearly an equal span with an 11 foot rafter and a 19 foot house 7 or 8 feet will be far enough apart.

The depth or strength of the bar using 16x24 glass will depend on the number of purlins you put in. The principal horticultural builders now use an iron rafter and a number of small iron purlins. In a bar of 16 feet length they would put in between ridge and plate three iron purlins and use a light bar, not more than a one inch square bar as it has little weight to carry. If you build yourself use 1-inch iron pipe for supports and the same for purlins, and as you would not have rafters in this house it would be impossible to have more than one purlin for a 12 foot or even 16 foot bar, so the latter should be of the best cypress and not less than two inches deep without counting check for glass, and one and three-eighths inches wide.

I can speak with some knowledge of three different styles of house, viz., equal span, three-quarter span, long-span-to-the-south, and three quarter span, short-span-to-the-south. My views of the latter style were given at some length in these columns not many weeks ago and I will only repeat that if there is any virtue in this style then the reverse or long-span-to-the-south is all wrong, and who would dare say that in the face of the overwhelming majority of our great rose growers who still swear by the long-span-to-the-south, and don't think it worth while even to build one of the new fads for an experiment. I feel sure an almost ideal house for carnations at least and I think for roses would be as follows: 19 feet wide from outside to outside of post, height from floor of house to ridge pole 11 feet, length of south sash bar 12 feet; length of north sash bar 10 feet 6 inches; height of north wall from ground to highest point of post 4 feet 6 inches, south wall the same but the upper 2 feet of this side should be glass. This latter feature I believe in strongly. This comes nearly being an equal span house, with this difference, the inequality in length of bar would throw the ridge sufficiently to the north to allow the center post, the most important one, to come inside the north bench. In this house you would have two benches, each about 6 feet 6 inches wide, a 2 foot path in the center and a path both back and front against the wall, and no benches up against the walls of the house. I feel certain that for light this house is all you could desire. About 8 feet apart would be sufficient to keep these houses apart. WM. SCOTT.

Forcing Spiræas.

Forcing the spiræas is considered a very plain and simple operation; they seem to respond so readily to a gentle heat, and their flower spikes appear to push up without any special care if only enough moisture is given about their roots. Few of the growers ever give the subject of improving on them any thought. Since some of the newer varieties such as *S. astiloides*, *S. palmata* and others came in use some failures to bloom them at the right time were experienced; the imported clumps in some instances would take their own time before starting into

growth, and no amount of coaxing could induce them to make much headway, and the flower spikes would not be developed at the desired time, although when once fairly under way they grew rapidly and also flowered freely, still it was too late then for them to be used advantageously. It is not generally known that these spiræas will make a quick start if the clumps are placed on a thick bed of moss, laid over the heating pipes and kept saturated with water before potting them up. Two or three inches of the moss should cover the crowns, and they must not be allowed to become dry at any time while they are on the pipes. If the heat is strong and the moss kept at the right moisture ten days will be enough to produce a fine uniform growth of four to six inches, when the plants should be potted up and placed near the light. In less heat or farther away from the boiler they require more time, but are sure to come on just as well as the others, and every crown will start out even and strong.

After the plants have thus once begun to push then it is not difficult to force them ahead in either a warmer or cooler house, according to the time of beginning the operation. Clumps which have been potted some time ago and are slow and backward may be placed pots and all on the pipes, and if the surrounding and covering of moss is kept saturated it will only take a few days to bring them out well above the moss, thus relieving us of much anxiety about their blooming too late for any certain date. It does no harm to have them a week or more ahead of time, for they may be moved to a cool airy house, where the flowers will keep fresh for a long time in perfect shape. The foliage of all spiræas is easily damaged by tobacco smoke, and should be kept away from it. Abundance of water is essential at all times, and they should never be allowed to suffer on that account.

J. B. K.

Size of Plant for a Retail Trade.

Do you think three gable greenhouses, one 12x100 for propagating, one 16x100 and one 20x100, would be sufficient to start up a good general florist trade, and at what cost you think these houses can be built? Also what help you think I would need, if any? How would be the best way to build them and run them? M. L.

The above is referred to me, and is difficult to answer without knowing more of the circumstances. The amount of glass mentioned above, if in the neighborhood of a large city, would be a very small establishment, but in a small town of ten to fifteen thousand people would be quite a plant to begin with. The propagating house would be large enough for twenty-five thousand feet of glass, but could of course be used for small stock, and only a portion occupied with the cutting bed.

Why build one of the larger houses 16 feet wide? Make them both 19 or 20 feet wide, and 11 feet wide is better for the propagating house than 12. If the latter your benches will be a most inconvenient width or your path will be too wide to be profitable. If you are not short of land to build on let all the houses be detached. Let the houses run east and west; that's important, with 6 to 8 feet between each. Equal span is good enough, or I will refer "M. L." to a description of a house which appears in the FLORIST of February 8, which I am sure is a good house, and is

A ROSE FORCING HOUSE IN ST. PETERSBURG.

not quite long span, short span, no equal span.

How to build would be a very long chapter if gone into thoroughly. If you can afford it get the houses built by one of the several good horticultural builders who are experts at the business and perfectly responsible. The worst class of man to trust to build your houses is the general builder of your town or village. He may be able to build a mansion, but he can't build a greenhouse. If you build yourself use only the best cypress lumber for bars, ridge and plates. Use double thick glass with lights not less than 12 inches wide. Red cedar posts will do. If you are in the smoke of a large town lap the glass. If you are away from smoke butt the glass by all means.

The 20-foot houses will cost you, if you manage right, about \$10 per running foot; the 11-foot house about \$7 per foot, all ready to receive the stock. If you are not a good deal of a greenhouse builder yourself you will do better to give the job to a horticultural builder, who will build a better house, iron posts, rafters, purlins and well heated, for an advance of 30% to 40% over the figures I have quoted.

WM. SCOTT.

Forcing Hardy Plants.

I have just received a shipment of lilacs, snowballs, deutzias and *Hydrangea paniculata*, imported stock, with large balls of roots, which have been put into 10-inch pots. What temperature and treatment shall I give them to get them in bloom part by Easter and the rest for Decoration Day? Have stowed them away at present in a cool place well potted and watered.

Montana.

It depends largely if these plants were grown in pots or lifted from the ground. Lilacs as received now from European growers are very easily forced and can be brought into flower in a temperature of

60° at night easily in three weeks. *Deutzia* I would give a month to and less heat. Snowballs, so called, give six weeks and if they need more or less heat it is easy to control them. I have never tried to force *Hydrangea paniculata*, and don't believe it ever should be attempted. It is one of our best fall hardy shrubs, but I am sure (although I speak without experience) that it will not be found a satisfactory Easter plant. The lilac and *deutzia* are all right, but leave the rest alone.

WM. SCOTT.

Decorations at Washington.

The second of the seven social events to take place at the White House occurred January 9, it being a reception by the President and Mrs. Cleveland to the diplomatic corps. The floral effect was perhaps the most elaborate, eclipsing former occasions. Mr. G. H. Brown, who always has charge of the East Room decoration, tries to add to the beauty of each succeeding occasion, and the decorations were probably on a more extensive scale than ever before. Mr. Brown's stock of plants for this class of work was never in finer condition, nor has he ever had so varied an assortment from which to make selections.

The East Room was most attractive. The general effect of the decorations was similar to those last described, with several new features. The two mirror rests at the north and the two at the south end of the room were banked with *adiantum* and *uephrolepis*. Suspended from the top of each mirror frame, falling over the mirror, were five sago leaves arranged in fan shape, the sides of frames being festooned with *smilax*. The two east and two west mirror rests were banked with carnations, azaleas and Roman hyacinths, fringed with bracts of poinsettias, studded with *cocos* and *Perle*, *Bride* and *Siebrecht* roses. The top of mirror was crowned with a banking of *adiantum*, from which fell six garlands of *smilax* studded with pink and

red roses, they being reflected in the mirrors. Under each of the eight mirror rests was a small mound of ornamental foliage plants. The four large white and gold columns, which support the two main girders in the ceiling were twined with *smilax*, with here and there a leaf of *rhapsis*. The three crystal chandeliers were festooned with *smilax*, with a crowning of palm leaves near the ceiling and garlands of *smilax* extending to the four electric moons around each. There was a string of 200 tiny electric lights looped from the four pillars to the four electric moons, and from the moons to the chandeliers, from there to the two large girders, along the girders back to the pillars, the wire holding the lights being concealed by strings of *smilax*, over 500 strings being used in this room.

The Blue Room, which was the receiving room, was decorated in Mr. Pfister's best style. The mantels were banked with *adiantum* and *asparagus*, studded with carnations, Roman hyacinths and *cyripediums*, fringed with bracts of poinsettia. The three windows in the south side of room were banked with palms. In the center window was a fine tall specimen of *Kentia Belmoreana*, and in each of the two side windows was a fine specimen of *Seaforthia elegans*. The tubs containing these center plants were concealed by a mound of ornamental foliage plants, high colored *crotons*, *marantas* and ferns. The mirrors and chandeliers were festooned with *smilax* and *asparagus*, extending from the chandeliers to the corners of the room; a festooning of *asparagus* extended around the room.

Both the Red and Green Rooms were decorated with foliage and blooming plants. The mirrors and chandeliers were festooned with *smilax*. Under the mirror rests was a grouping of high colored *crotons*, *marantas*, *pandanus*, ferns and *echeverias* in flower. The main corridor leading from the East Room to the conservatories was decorated with palms, dracæ-

nas, pandanus, crotons, marantas, curculigos, aspidistras and *Ficus elastica* and ferns arranged in groups, against the stained glass partition and in the niches. The marble tables in this corridor were banked with ferns and flowering plants. The three large chandeliers were festooned with smilax.

The Gridiron Club (which is an organization of Washington correspondents) held its annual dinner at the Arlington Hotel on Saturday night last and as is always the case with this famous club the event eclipses everything in the social universe.

The table was in the shape of a gridiron and covers were laid for one hundred and seventy guests. On either side and back of the president of the club were tall kentias looped together with strings of smilax studded with cattleyas to form a bower. On the floor opposite the president was a half circle banking of ferns about the height of the table, from which sprung dozens of long stemmed American Beauty roses. Immediately in front of the president was a large oval composed of Farleyense, mignonette and Brunner roses. At regular intervals down the six distinct tables (which formed the ribs of the gridiron) were plateaus of Farleyense, Brides, Beauties and Brunners. Between each of these was a cut glass vase filled with roses and carnations, alternating. The ceiling and mirrored walls were festooned with southern smilax. The four corners of the room and windows were banked with palms. Wreaths of roses tied with black and white ribbons, (the colors of the club) rested against the mirrors.

At the diplomatic dinner at the White House January 16 the table was spread in the inner corridor, following the custom inaugurated last year. Covers were laid for sixty-six, thirty persons being seated at either side and three at each end. In the center of the table was placed a plateau twelve feet long by two and one-half feet wide filled with adiantum and asparagus thickly studded with Bridesmaid roses. At each end of the center plateau was a round piece of *Nephrolepis davallioides* furcans about four feet in diameter, studded with the same rose, then came another plateau five feet long filled with adiantum with a fine specimen of variegated pineapple for a center and a smaller one at each corner, with two good specimens of *Nidularium* (karatas) *spectabilis* on either side of the center, the outer edges being studded with Bridesmaid. At the end of these plateaus was another round piece of *nephrolepis* studded with the same rose. The ladies were furnished corsage bouquets and the gentlemen boutonnières of the same flower. The table decorations were entirely pink, 850 Bridesmaid roses being used and about the same number of Scott carnations.

The two mirror rests were banked with Scott carnations, the frames being festooned with asparagus with a string of tiny red, white and blue electric lights run around it. The doorway entering the Blue Room was decorated in the same manner. The three crystal chandeliers were festooned with smilax, with six garlands of asparagus, studded with Scott carnations extending from their tops to corners and sides of room. Over the top of the stained glass partitions were three long loops of small knots of red, white, and blue electric lights with a double festooning of asparagus.

Over the doors at either end of the corridor was a banking of ornamental foliage plants, beneath which were festoonings of asparagus which extended to the sides of the corridor or room as it might be termed. The effect was rich and beautiful and a credit to Mr. Henry Pfister. About 800 yards of asparagus were used in the decoration of this room.

REYNOLDS.

Miscellaneous Seasonable Hints.

There is a large class of small stuff that will be wanted in May with the general florist, and among them are the drooping and spreading plants called vines. Many of them are easily increased, but for all that they are sometimes forgotten. Nasturtiums of the semi-tall type are always raised from seed, it is not well to have them too large. Sow about March 1. When in 2 or 2½ inch pots don't keep them in a moist shady house or they will soon be useless; rather starve them on a shelf and they will flower sooner and much better stand the sun and wind when put into a vase or veranda box. German ivy so-called (*senecio*) is such a weed to grow that little need be said about it, only have stock enough to be able to put in a big batch of cuttings early in April, for these are the plants that will make the useful size and will make a show when used end of May. If you lifted some plants of lobelia in the fall and cut them back as you should have done you will have plenty of cuttings, and those put in now and much later will make plants very attractive with their profusion of blue flowers. The lobelia is not a laster, but it is very attractive as a starter. *Erinus speciosa* and *gracilis* and improved strains of those varieties are the best lobelias for veranda boxes, and if there is any place where a hanging shelf is to be commended it is for lobelias and such like plants, which must have attained some size or they are useless for the purpose for which they are wanted. White is also a color that is generally deficient in this sort of work, and the double sweet alyssum is indispensable. It is by no means a plant that quickly goes out of flower. It can only be raised by cuttings, and early in March a large lot should be propagated. By the middle of April they should go into 3-inch pots and be put in a mild hotbed, where they will make large plants. Remember that where you fill veranda boxes by the foot and vases for so much each it is cheaper for you to have good sized plants, so many less are needed, and it will be to your customer a much more satisfactory job. *Lophospermum* can be raised from seed sown early (now) and will make good plants, but cuttings are better and can be put in now or the next six weeks.

WM. SCOTT.

Germinating Cocoanut.

I have had a cocoanut with outside husk on sent me to grow. Will it germinate in an ordinary greenhouse? If so, how long will it be before commencing to grow? Should the outer husk be broken before planting?

SUBSCRIBER.

Canada.

The cocoanut (*Cocos nucifera*) is not one of the easiest palms to grow under artificial conditions, but the seed can be germinated in an ordinary greenhouse providing it is kept warm enough. It is not necessary to remove the outer husk or covering before planting the nut, as the young shoot will readily penetrate the husk when growth begins. The nut should be laid on its side in a pot or pan ten to twelve inches in diameter, and should not be completely buried in the

soil, about two-thirds under ground being enough.

A light well drained soil is preferable for this purpose, and the pot containing the seed should be plunged in bottom heat of 75° to 80°, this palm being decidedly a heat loving species and attaining its fullest development in localities having a minimum temperature of 70°. The time required for germination is rather uncertain, but is not likely to be less than three months, and may be considerably longer.

W. H. TAPLIN.

New York.

Those who went to the February meeting of the Florists' Club expecting some fun were not disappointed. Not for a long time, if ever, have the oratorical abilities of the members or the parliamentary skill of the chairman been so fully demonstrated as on this occasion. The recent organization of the private gardeners and the question as to the club's duties towards this very useful branch of the profession, and its possible remissness in the past was the "bone of contention," the subject having been put in debatable shape by the motion made by Mr. O'Mara at the previous meeting to change the title of the New York Florists' Club to that of the New York Florists' and Gardeners' Association. After an animated discussion a vote was taken and the "noes had it," so the title of the club remains as before. Mr. McCrowe, superintendent of the Paterson parks, addressed the meeting on behalf of the private gardeners asking that in future exhibition schedules special provision be made for such exhibits as would come within their scope, and predicted that in this way might be developed a taste for flowers and plants other than the limited variety now grown for commercial purposes and people of wealth attracted to the shows as never before.

Mr. J. I. Donlan came next with a plea for some action to interest the retail florists more in the club's welfare and presented a motion providing that silver medals be offered at the regular meetings for artistic and original floral designs. Several speakers were rather skeptical as to the possibility of interesting the retail people by such means, and pointed to the fruitless efforts in this direction in the past, but there was a disposition to give the proposition a trial and it was so ordered, the first competition to take place at the March meeting and the award to go to the individual making the design. Mr. Donlan's next proposition was that the entertainment committee arrange for a joint debate between the Gardeners' Society and the Florists' Club at an early date. There proved to be a whole evening's fun in the mere debate on the proposition, and as the idea was finally adopted it goes without saying that when the affair does come off it will prove a prime attraction.

The president appointed the following committees: On essays and entertainment, Messrs. P. O'Mara, W. F. Sheridan and S. C. Nash. On awards, Eugene Dailedouze, Peter McDonald, Robert Angus and Ernst Asmus. The secretary announced that it would be required of all guests intending to be present at the dinner on the evening of February 20 that they register at the Carnation Society meeting on that day. The dinner will be at the Broadway Central Hotel at 7 p. m. On the exhibition table was a vase of handsome seedling carnations from Mr. C. W. Ward.

The usual activity of the period immu-

A FLORIST'S STORE IN ST. PETERSBURG.

A WINTER-GARDEN IN ST. PETERSBURG.

diately preceding the coming in of Lent is now on and all branches of the cut flower trade are busy. Dark weather has reduced the production somewhat and also had an unfavorable effect on the quality of stock coming in. Really first-class bloom sells well and demand for such is steady at fair prices, but the net results from the poorer grades are exceedingly small. All kinds of bulbous stock remains inactive regardless of quality.

Tulips are the dearest commodity seen in this market the present season.

Jos. E. Rolker has returned from a three months' trip to Germany, Holland, Belgium and France. Indulgence in all these foreign tongues has not affected his well recognized command of the English language, and if the new importations of novelties in florists' supplies do not sell rapidly it will not be Joe's fault.

Mr. W. S. Allen has been installed as

manager and H. E. Baylis assistant manager in the New York Cut Flower Co.

James Hart will add six hundred running feet of rose houses to his Madison establishment.

Plantsmen say that ficuses are scarcer in this market than for several years past.

Visiting New York, G. W. Wilson, Malden, Mass.

The Broadway Central Hotel, where the carnation barquet will take place, has agreed to give "commercial rates" to all parties attending the carnation meeting. Guests will be accommodated on the European or American plan as desired. The location is central and equipment first-class and it is expected that a large proportion of the visitors will be quartered there.

Boston.

The usual interesting little display of flowers was staged at Horticultural Hall on February 8. James Comley showed a table of camellias, also a dish of very tempting forced rhubarb. From the Bussey Institute came a beautiful collection of forced hardy shrubs such as pyruses, spiræas and andromedas and some fine anemone flowers. E. Sheppard showed dendrobiums and cinerarias and Oakes Ames a promiscuous display of greenhouse bloom. A good plant of *Dendrobium glumaceum* came from Harvard Botanic Garden.

Just now the city stores are quite busy, trade in all lines being fairly good. Funeral work has been in great demand and judging from what one sees in the various stores daily, designs are not out of fashion yet by any means. Dark and rainy weather has prevailed during the week, shortening up the crop of flowers to a considerable extent and ensuring a fair price for stock coming in. Roses and carnations suffer somewhat in quality, but with a small supply to select from customers are less particular and all is sold at average figures. Daffodils show a marked improvement in quality. Dutch hyacinths are seen in considerable quantity.

The material being excavated in the constriction of the subway is being used to raise the grade of the common in the low portions. Over considerable of the space the grade will be raised four feet or more. The large elms and maples numbering fifty or sixty trees are being raised to the new level, an undertaking of considerable magnitude but well worth all it will cost.

Mr. Walter Deane of Cambridge has been engaged for the past twenty years in collecting, preserving and classifying all the wild flowers, trees and shrubs named in Grey's Manual. This superb herbarium now numbers nearly twenty-five thousand specimens, comprising over four thousand species and varieties of plants.

The garden committee of the Mass. Horticultural Society with other invited guests visited the establishment of Wm. Nicholson on Thursday, February 13, where they were hospitably entertained and spent a most delightful time inspecting the carnations for which the place is famous.

Secretary Dawson of the Gardeners' and Florists' Club is in receipt of a cordial invitation from Secretary Young of the New York Florists' Club for the members of the Boston club to attend the dinner which is to be given in New York on the evening of February 20, in honor of the American Carnation Society.

Thos. F. Galvin has been ill for several days and narrowly escaped pneumonia. He is now convalescent.

Visitors in town: John Barclay representing John Gardiner & Co., Philadelphia, J. E. Killen representing C. H. Joosten, New York and Winfried Rolker.

Pittsburg.

Once more through the courtesy of Mr. W. C. Beckert and Mr. Frischkorn the Florists' Club held its regular meeting on Tuesday night, 11th inst., in their place of business, 19 Federal street, Allegheny City, and I am glad to state with a very good attendance. The committee on securing a hall for permanent place of meeting reported that they have an offer of a very good large room in the McKnight building, corner of Federal and Lacock streets, about three squares from the river, but renting it would necessitate the changing of our night of meeting. After a full discussion the committee was instructed to secure the room for the second and fourth Thursdays of each month, to which we have changed our regular meetings. It was also decided to conclude one of our meetings each month with a social, including refreshments, under the management of a committee of three. The first one will be on Thursday, 27th inst., which will also partake of the nature of a house warming in our new quarters. It is earnestly hoped that the members will turn out in force now that we will have a first-class place to meet in. Any visiting florists or those connected with the trade are cordially invited to attend our meetings; they will find a hearty welcome, and we ask them to remember that the "latch string is always out." Two applications for membership were placed on file to be voted on at next meeting.

The committee appointed at the previous meeting to report resolutions expressive of the club's sentiments on the death of our late president reported the following, which were unanimously adopted and the committee instructed to have them suitably engrossed and framed:

WHEREAS, It has pleased an All-Wise Providence to remove suddenly from us by the hand of death our esteemed and valued fellow member and president, Augustus White Bennett; therefore be it

Resolved, That the Pittsburg and Allegheny Florists' and Gardeners' Club has lost an earnest and able member, the community a faithful, energetic citizen; and his family a kind, loving husband and father; one who at all times labored earnestly and faithfully to promote the best interests of this association and those of floriculture. To his judgment we had all learned to defer as being at all times correct. In the brief period of his association with us he had so won our confidence and respect and so thoroughly became one in sympathy with us that it seemed as though we had known him a lifetime.

Resolved, That the beauty and attractiveness of the different parks of the city are the result of his skill and untiring energy. In the brief period of two years, under his skillful management, the wonderful transformation has taken place. The attractiveness of Schenley Park and Phipps' conservatories is an enduring monument of his ability, knowledge and broad mindedness.

Resolved, That we tender to his bereaved family our sincere sympathy, commending them in their great sorrow to Him who has promised to be a "husband to the widow and a father to the fatherless."

Resolved, That these resolutions be adopted as the sentiment of the Pittsburg and Allegheny Florists' and Gardeners' Club, to be engrossed on the records, and a copy presented to the family of A. W. Bennett.

SAMUEL McCLEMENTS, } Com.
A. FILSON DALZELL, }
GEO. W. BURKE, }

Nothing of special importance in the trade to report this week, although the general trade is looking up a little. Stocks are plenty, especially freesias, lily of the valley, bulbous stock generally, and carnations, and all of very good quality. Tulips are coming in in better quantity and quality too.

Mrs. Bennett, widow of the late A. W. Bennett, has another son added to her

family; he is nearly a week old, and both mother and child are progressing finely.

Mr. Arthur T. Boddington, with Pitcher & Manda, and G. L. Spear, representing John C. Meyer & Co., Boston, were with us this week.

The constant rain for several consecutive days has a very depressing effect on the general trade of the florists, and if it were not for the large number of social affairs arranged for this week and next they would all be experiencing a severe attack of depression of spirit, but as it is are comparatively well satisfied. The chief event of a public character was the fourth annual performance given on Friday afternoon for the benefit of the West Penn Hospital, one of our foremost and most deserving institutions, at the Alvin Theater, the patronesses comprising some of the most charitable and fashionable ladies in the two cities. The address on behalf of the Hospital management was delivered by Judge Joseph Buffington of the U. S. District Court, while the entertainment itself consisted of acts contributed by the different companies playing at five of the leading theaters this week, all however, volunteering their services. The florists reaped a good harvest from it, judging from the amount of flowers in evidence in the auditorium, the large number of theater parties in attendance, all of which were preceded by luncheon or followed by suppers, house entertainments and dances (necessitating more flowers) in the evening. The performers were rewarded by a profusion of gifts of baskets of flowers, bouquets, etc., Mr. Gustave Ludwig alone had orders for nearly forty baskets for this purpose.

Randolph & McClements report trade pretty good in the East End; they have made some improvements in their palm houses, dropping the benches some and re-arranging the street end of them. Their stock now shows to better advantage and is doing better. They have a large demand for growing ferns for fern baskets, so much so that it is with difficulty they have been able to fill their orders, as ferns such as they require are scarce and hard to get, east or west.

Mr. J. L. Wyland, who was eminently successful with chrysanthemums the past season, is cutting roses of a very fine quality now. I saw Bridesmaid roses that were the equal of any shown lately; his other stock is also quite up to the mark.

Mr. N. Patterson has been confined to the house with a slight attack of grippe, but is now able to be at his store on good days.

Elliott & Ulam are getting a share of the good things that are around, they have had some nice orders from the immediate vicinity, and they had the pleasure of sending the bride's bouquet, a large one of lily of the valley, to Washington for the daughter of the Hon. M. S. Quay.

REGIA.

Toronto.

The meteorological report for this district for the past month has some items interesting to florists. The mean amount of cloud was 82, which is 8 above the average. There were only 44.8 hours of sunshine out of a possible 285.7, and 21 days were completely clouded. No wonder roses are scarce.

Mr. H. Dale of Brampton reports that trade has been good during the past week, everything selling at fair prices. Roses, especially Brides, were short of the demand, while the call for carnations, Romans, valley, daffodils, etc. is about

equal to the supply. Speaking of violets Mr. Dale says that the California is "all right, large flowers, long stems, sweet and productive, a bunch of 100 or 200 makes quite a show compared with the same number of doubles and they sell."

A call on Mr. R. Jennings, also of Brampton, found his place in good shape; he has nine houses of roses, carnations, violets and mixed plants. A house of Marie Louise violets is in grand condition. A bench of Bridesmaid was very fine, but another of Bride and Mermet carried over from last year were not so good and had not come up to expectations. Carnations Scott, Daybreak, Wave, McGowan looked very well.

I see by your Pittsburg notes that Mr. Joe Spring has been at his old tricks with Phalaenopsis Schilleriana again. When in Toronto five or six years ago he grew a specimen of that orchid with I believe it was 164 blooms, the largest number ever heard or read of. I have no doubt he will do as much with his present specimen.

Grainger Bros. of Deer Park are building a new brick store with plate glass front in connection with their greenhouses. They are also erecting three new greenhouses, which will add nearly 4,000 feet of glass to that which they already have.

The annual dinner of the Gardeners' and Florists' Association was a grand success, without doubt the most successful thing of the kind the Association has ever had in the course of its checkered existence, not a hitch occurred and not an ill word was spoken to mar the perfect harmony, good will or enjoyment. The dinner was good and well served, the speeches were most entertaining and the singing suited everybody, sentimental, patriotic and comic, the way those choruses were sung was enough to crack the plaster on the ceiling. Dunlop's quartette sung very sweetly. The decorations, which were bossed by Mr. C. Tidy, also deserve special mention. There were two long parallel tables with a four foot space between rounded off into one at the ends. The space was filled with palms, ferns, flowering plants, etc., not high enough to prevent seeing across from one side to the other, the effect of this was quite novel and very fine, the tables themselves were dotted with large vases of carnations, roses, daffodils, etc., with two magnificent vases of cattleya at the head, one of them being a large white form of Trianae. Extra side tables had to be put in to accommodate all the guests—there were 105 of them—and these were also decorated with vases of flowers. Most of the aldermen composing the city parks and gardens committee were guests and they must have become aware during the evening that the Toronto Gardeners Association was no "small potatoes" and was worth cultivating.

Dunlop reports design trade very good all last week, but much hampered by scarcity of white material. There is still a deal of dull weather and the supply of roses is short. Bulbous stuff however is very good and plentiful so that the "aching void" is filled somehow. E.

Cleveland.

Business during the past week has been good with nearly all the florists, although there has not been anything out of the ordinary to develop a demand for flowers. Stock has come in with reasonable regularity, and with the steady, even demand has prevented any noticeable alteration in prices. In all the windows Dutch bulbs

HOUSE OF DELLA FOX CARNATIONS AT THE ORIGINATORS' MESSRS MYERS & SAMTMAN, WYNDMOOR, CHESTNUT HILL, PHILADELPHIA.

are prominent, and are of good quality. There does not, however, seem to be the profusion of that class of stock that has characterized other years at this season. It begins to appear as though florists had at least learned the lesson that should have been taken to heart several years ago. I mean the proper relation and proportion that bulb stock should bear to regular greenhouse stock. Dutch bulbs have their place. We could not get along without them. But they should not be grown in such quantity as to render the sale of them at a fair price an impossibility. Grown to that extent they constitute not only a source of direct loss to the florist, but they have a very disastrous effect upon the prices obtainable for cut flower stock of other kinds. It is not meant that the situation is particularly satisfactory from that point of view even now, but there are some signs of a disposition to relegate bulbs to their proper place.

The regular meeting of the club was held on the evening of February 11. It did not develop an attendance by any means equal to that the smoker brought out, although business of very great importance was brought up for final action. Among other matters the entertainment of the national executive committee was discussed. It has been referred to a committee to act upon and whatever in their judgment appears advisable will be satisfactory to the club. Whatever form the matter may take there will be a pleasant time for everybody. It should also be remembered that the executive committee convenes here on February 25, which is also the occasion of the next club meeting. It is probable the local florists will upon that evening have an opportunity to meet the national officials, so that a large attendance is looked for.

W. H. Beaumont, the "floral king," who has been doing business on Euclid avenue ever since Noah abandoned maritime pursuits, has moved to Erie street, where he now receives visitors to his court. That makes five within a stone's throw of each other, and leaves Eadie and Gasser alone in their majesty on Euclid avenue. Who will next forsake that classic avenue?

A.

Chicago.

This week has seen a scarcity of stock really unparalleled at this season. Roses are phenomenally scarce, and Christmas prices prevail. Brides and Bridesmaids are the scarcest and most in demand, and cases were noted where 12 cents was offered for the former. In one instance on Friday morning a wholesaler trying to supply an imperative order was said to have borrowed 20 Brides from a retailer, after giving bonds to replace them during the day. Meteors were also very lofty in price, and even Perles were beginning to put on airs. This unusual shortage is rather hard to account for; the plants are in good condition and every grower promises a fine crop in the future, but just now, when the demand is briskest, stock is non-existent. Local retailers go from place to place searching for stock to fill their needs, and shipping orders are only partly filled.

Carnations are not overplentiful and some days they are quite short. The wholesale men are long on one line, however, and that is bulb stock, and in spite of the scarcity in other lines it does not seem to move any better. It was suggested, in light of the scarcity of roses, that some of the wholesale men might refuse to let a man have roses unless he would take some bulb stock with them

just for luck. Daffodils are more plentiful, and sell very poorly, and Dutch hyacinths are crowding in. Violets vary—some days they are short and the next day they are plentiful.

Walter Kreitling now openly admits that he has wheels—but not in his head. Flowers and Gladiator bicycles—beauty, strength and speed—is the combination Walter is playing now at his Wabash avenue store.

A. L. Vaughan has been seriously ill for the last four weeks.

Louis Dreber, formerly foreman for Poehlmann Bros. of Morton Grove, has succeeded Henry Diers of Sibley, Ill. Mr. Dreber intends to grow cut flowers for market.

L. M. Jordone has discontinued his store on Washington street.

Walter Renssion of Sioux City, Iowa, was a visitor this week.

Buffalo.

As Lent approaches the balls and parties are coming a little faster. The charity ball takes place Monday of this week, and brings together all elements of our citizens, but brings few shekels to the poor florist's pocket, as everything is done for sweet charity's sake. Flowers of good quality have not been so plentiful of late as they were three weeks ago. Roses, carnation and violets are cleaned up at the end of a day's business. Daniel B. Long corroborates this. There has been a fair demand for tulips and daffies. The price is about half what it was six years ago, which makes a great difference in the receipts; still if they sell well there is a good margin left for the grower, for the price of the bulbs is greatly reduced. As in other cities pink is the favorite color in tulips here.

Milley Bros. of William street have sold their retail store business to Mr. Charles Hewson of the Abbott Road, who was exclusively a grower. Mr. Hewson has every attribute to make a success of a store business, good looking and young, but not young enough to be giddy, of exemplary habits and business integrity away above par, with avoirdupois sufficient to give him a solid appearance. He is bound to make a success of the business in that thickly populated district. Milley Bros. will devote their energies to growing for the wholesale trade and the market, at which they always excelled.

I forgot to mention that we had a call a few weeks ago from Mr. G. Leadly of Detroit and Mr. J. Carey of Mt. Clemens. They were on their road east on a tour of inspection. We hope they arrived home in the Wolverine state physically refreshed and mentally enlarged.

An unexpected call came on Friday last in the shape of Allie Salter and Charles Vick of Rochester, same old boys. They called round to see the craft generally, but bowling was on their brain. We urged them to get a team and be represented in Cleveland. They said they would be far more likely to be dangerous as shooters; hope they may.

We have had two day's heavy fall of snow; it is now two feet on the level and six feet where the trolley car has shoved it up against your door.

Visitors in in town: Martin Reukauf, representing H. Bayersdorfer; R. Salter and C. Vick, Rochester. W. S.

St. Louis.

This week trade was good with some florists, while others claim it was dull, still flowers are very scarce; for three weeks past really first-class stock has been short, commission men report large shipping orders but can't fill orders for home trade. Prices are at top notch. Last week Brides could be bought for \$6, this week they went up to \$10, the same can be said for Bridesmaids and Meteors. Perles are selling for \$5, Beauties keep very scarce, the price is from \$12.50 to \$50 for good stock. Carnations that come in are good but not plenty just now, prices ranging from \$1.50 to \$2. Some extra fine bring \$3. Daybreak and Scott have the call. Bulb stock was better this week, scarcity in roses made them sell better. Romans sell at \$1 to \$3. Daffodils have been a glut and sold as low as \$2. Tulips, yellow and red, are going slow. Harrisii sell at \$12.50 and callas go for \$10 to \$15. Orchids have now become standard stock in this market; most of them comes from Mr. Brown's place at Brownhurst.

The meeting of the Florist Club this week, Thursday, was a carnation meeting, and lots of new carnations were expected to be shown by local as well as outside florist.

Alex Waldbart leaves this week for Cleveland to attend the meeting of the executive committee of the S. A. F.

The son of Wm. Pape, Supt. of Public Parks, died last Sunday. Mr. Pape has the sympathy of all the florists.

Ayers Floral Co. and George Waldbart have been very busy of late with funeral orders.

F. J. Fillmore is cutting the best roses that come to this market; his Woottons are exceptionally fine. They are of a high color, fine foliage and very large buds; could be sold at a pinch for Beauties.

E. W. Guy and Dr. Halstead both of Belleville, Ills., are sending some fine stock to this market.

Simon Skidelsky of M. Rice & Co., Philadelphia, and Burt Van Simons of Crosman Bros., Rochester, N. Y., were recent visitors.

Fred Weber made a very handsome decoration Tuesday night at the Germania Theatre.

At the Bowling Club Monday night four games were rolled. The new style of game was rolled, the two high men choose up sides after every game, the losing side pays 10 cents per man, the winning side 5 cents per man and the club 5 cents; this seems to be satisfactory to the members and great excitement prevails, as every man wants to be on the winning side. The first game Weber and Beneke were captains, Beneke's side winning by 39 pins. The second game Sanders and Schray were captains and Schray's team won by 94 pins. The third game Weber and Beneke were again captains, but this time Weber's team won by 73 pins. The fourth and last game Kuehn and Schray were captains, Kuehn's side won by 117 pins. The best roller in the four games was Fred Weber, he rolling 788 pins and also made the highest single score of the night, 261. Emil Schray was second with 781 pins and single score 240, J. J. Beneke was third with 759 pins and a single score of 235. Mr. Simon Skidelsky was a visitor to the alleys, and made some good scores. J. J. B.

San Francisco.

Trade the past week has been very good indeed, the demand, on account of several very big weddings, being very large and immense quantities of stuff being used. This is particularly true of violets, which have formed the chief article in demand, hundreds of bunches of Marie Louise and Czar being used. There was also quite a large quantity of Swanley White sold. The Californias, however, can be sold over any other sort. We notice quite a lot of talk over this violet in the trade papers, chiefly that it is of no value. It is very probable that this violet will not force, but as we have it growing here in California in the open ground all winter it produces large quantities of immense flowers on long stems, and here in San Francisco is undoubtedly "the" violet.

Roses have taken quite a jump and are also in big demand. Testouts bring \$1 to \$1.50 per dozen. Brides, Mermets and Maids bring 50 cents. Beauties of good quality are very hard to find. Portia carnation is in good demand and brings 25 cents per dozen. Scotts bring 35, also Daybreak. Harrisii go very well at \$2.50 per dozen, but all other bulbous stock moves very slowly.

Mrs. H. H. Berger has decided to add carnations to her list of specialties and is contemplating the erection of several houses. She has had a new boiler put in lately which is giving satisfaction.

Mr. James Johnston, who has been in the horticultural department of the University of California for some time, has resigned his position to take one in Holy Cross Cemetery.

At last the quarantine on the bulbs in the bay has been removed and the various shipments have been landed. It is so late in the season that the importers have put the prices away down this year to dispose of them.

The continuance of good weather has given quite an impetus to the seed growers, who are now going ahead with their plantings. The onions which were flooded a few weeks ago are all dried up and growing nicely with but few exceptions.

Mr. David Meldrum, who has been gardener at the State Capitol for two years,

has started in the nursery business in Santa Rosa. He will make a specialty of cut flowers and ornamental trees.

There is one question which has been agitating the wholesale and retail trade for several years past, and with which they seem to be unable to cope. That is the competition from Chinese growers. This originated several years back, and every year sees a larger number of them still coming into the trade. For instance, a wealthy resident will give say 5 or 10 acres of land on his place to a company of Chinese, who in turn agree to take care of his lawn and avenues. He furnishes them with water and every necessity that they wish. The consequence is that they flood the market with nearly every flower but roses and inside stuff, running the prices down to such a low figure that it is very nearly impossible to compete with them. Last year the wholesale and retail men organized what was called the Florists' and Growers' Protective Association, the main object of the society being to crush the Chinese. Everything went along smoothly for a while, when everything burst up in a fizzle and the society very soon went out of existence. While they were organized some very good work was done, but the society was of such short duration that nothing was accomplished. This is a subject to which several of the trade are now turning their attention, and it is to be hoped that something effective will be done this time to remedy this great evil.

Large dinner decorations are few and far between this season. Shipping trade is rather slow just at present, owing to the bad spell of weather that we have been having for several weeks, but all expect it to open up as soon as the weather gets settled.

Domenic & Ravellia, who have conducted the store on Kearney street, have dissolved partnership, Mr. Ravellia retiring altogether, which resulted in the closing of the store. The Sutter street store will not be affected in any way, however.

J. Quentin, the florist on Valencia street who has conducted that store for years, is in financial difficulty. It is to be hoped that satisfactory arrangements will be made with his creditors so as to allow a continuance of the business.

The hyacinth exhibition of the California State Floral Society will take place in Maple Hall of the Palace Hotel this month. Several valuable prizes will be offered to amateurs.

Mr. Frank Pelicano went to Menlo Park last Sunday and enjoyed a fine day's sport with his gun. Frank is an excellent shot and very few birds escape his aim.

The well known seed growers, C. C. Morse & Co. of Santa Clara, incorporated their business on January 6. The principal places of business are to be Santa Clara and Gilroy. Their object is to extend and carry on the buying, selling and growing of garden seeds. The capital stock is to be placed at \$200,000, divided into 2,000 shares, all of which is fully described. The following are directors: C. C. Morse, Lester L. Morse, B. W. Morse, M. J. Morse and Eva H. Morse.

Mr. S. Parker has succeeded Wm. Nesbitt as foreman of E. W. Parsons' place at San Jose. METEOR.

Greenhouse Building.

North Leominster, Mass., M. D. Haws, one commercial house 150 feet long.

Chester, Pa., W. S. Wilson, one conservatory.

Philadelphia.

Business has been brisk the past week, and all kinds of stock have moved lively. While there has not been a great scarcity of good roses the quantities sent in each morning have not been sufficient to supply the regular orders, and what should come in the next day are sent in for the afternoon trade. The man that raised the *Mermet* should have a monument erected to his memory, for without the *Brides* and *Bridesmaids* of to-day what would the poor florist do? They are the great sellers. Prices remain much the same as last week, while the quantity seems to bother the storekeeper more than the quality. The best teas bring \$10. *Perles* and other small kinds 5 to 6. Beauties are \$5 per dozen for the best, with fair medium stock stems 12 to 18 inches selling from 2 to 4. There are very few hybrids about, none of the growers having any quantity in at present. \$5 per dozen is asked for the best *Brunners*, and 3 for the *Laings*, mostly from *Burton*. Carnations are selling freely, *Scotts* leading; if it only had a little stiffer stem; \$1.50 to \$2 is the price. Daybreak seems to be losing in popularity. *Della Fox* as grown by *Myers & Samtman* is certainly a fine carnation; the flowers are uniformly large, and always have a long stiff stem. *Lonsdale* is sending in a few fine *Jubilee* and *Maud Dean*, and his benches of seedling flowers contain evidences of blooded stock that seems equal if not superior to some of the blue ribbon varieties seen at the show. Violets are more plentiful and sell readily at \$1 per hundred for good stock. *Supiot* is still on top with his new *Luxonne* violets; he has several varieties and it puzzles him to say which is best. The day of the little *Schoenbrun* violet is about closing. The larger varieties will certainly drive it out. Valley is plentiful, but there is not much of it up to the first grade; it takes more than good pips and water to grow first-class valley; a little brains must also be added to the combination.

John Burton is planting a house of Beauties and Belles in solid beds; these are for fall and early winter cutting. Long stems are wanted with good Beauties at all times, and it is to supply this demand at a time when it is not advisable to cut long stems with roses grown by the bench system that *Mr. Burton* is trying this plan.

Mr. Lonsdale comes to the front as an inventor and has even gone so far as to apply for a patent. His idea consists of an iron pan six inches wide, fifteen long and three deep, beneath which is a chamber the length and width of the pan, a quartered hole for inch or inch and a threaded steam pipe admits to this lower portion at both ends. By connecting these iron evaporating pans—for this is what they are—with a line of steam pipe and filling the upper portion with a strong decoction of tobacco it is evaporated and the fumes distributed in such a manner as to kill greenfly without injuring the color of the flower as is the case with the old method of smoking. *Mr. Lonsdale* has used it but a short time and finds it to be very effective, he hopes to be able to distribute sulphur in much the same way so as to carry off the greater pest, red spider. The advantage of his form of evaporator over the one having a pipe pass through the trough is that by filling the chamber with steam at the bottom the evaporation is much more rapid and effective. His pans are attached to a separate line of pipe and connected with the regular heating service.

A bench of *Jubilee* carnation seen here are very fine, the bench of *Scotts* adjoining are no better in the matter of number of blooms and buds and *Mr. Lonsdale* gave it as his opinion that it will be equally as free a bloomer as this popular kind. At last the much looked for better and larger red than *Portia* is here. *Maud Dean* is also very fine with him; he says there is nothing to surpass it in beauty of form, fragrance, and good stem to say nothing of its lovely color. K.

New Orleans, La.

M. Jules Fonta, for thirty-five years one of the leading members of the craft in the Crescent City and the new superintendent of Audubon Park, recently returned from a two years' visit to his native soil, France, one of the first things that impressed him was the great strides made in decorative art as applied to plants, larger numbers of flowering and foliage plants being used than hitherto, and better prices obtained in Paris and other principal cities than here. At the Hotel du Louvre at Paris one passes through an avenue of more than 100 noble specimens of *Dicksonia antarctica*, these are flanked by big palms, some, as *Chamaerops excelsa* for instance, being 25 feet tall. These are imported from Algiers. He was surprised to meet, among members of the profession, many readers of the AM. FLORIST. The chrysanthemum reports with illustrations at that season were especially interesting. During his sojourn in Toulouse he gave a small chrysanthemum and carnation exhibition, commencing by purchasing from *Vilmorin* 200 seeds of carnations, from which (to the credit of the seedsman be it recorded) he succeeded in raising 200 plants. The year following these gave very fine flowers, while in chrysanthemums some measured eight inches across and were of perfect form and of beautiful colors. They created quite a stir. He attributes the good results to the fine climate prevailing in that section. In Versailles orchids are grown largely, Messrs. Truffaut, Duval and Thibaut each possessing splendid collections, but although the plants appeared healthy they had not that vigorous appearance noticeable in the plants grown in the vicinity of London.

He was much impressed with the interest taken by those on the other side in their brethren here and believes that travel is largely responsible for the rapid advances made in the demand for plants here. Especially noticeable is this in New Orleans, where only a few years since little but grass and a few plants existed; now some of the choicest and handsomest specimens adorn the lawns. M.

St. Paul, Minn.

January has been a busy month. Everything in cut flowers sold well, roses, carnations and violets taking the lead. The demand in these has been a little ahead of the supply and more flowers could have been sold had they been obtainable. Retail prices have been very good. Roses ranging from \$1.50 to \$2 per dozen. Carnations 50 to 75 cents. Bulbous stock has sold fairly well. *Harrisii* especially have been in demand, retailing at 25 cents each. Some nice *Von Sion* are now in the market but do not sell readily. In fact yellow has lost its charms and pink is the fashionable color.

Dutch hyacinths of an inferior quality are seen in limited quantities and sell fairly well. Primroses meet with a ready

sale, while cyclamens are poor sellers. One noticeable seller is the azalea, and good plants retail readily at sight.

The dark cloudy weather has interfered greatly with the quantity and quality of the cut. Notwithstanding the dark weather Meteors have been exceptionally fine and every one seems to have had good success with them.

In Minneapolis the brethren are still handicapped and undersold by department stores, still in spite of this trade has not lagged.

J. S. Gray has closed his greenhouses for the winter. *R. Wessling* is erecting three new houses, while *Jacob Hartman*, his former partner, contemplates building in the spring. This would indicate that trade is not entirely dead in our sister city.

Mendenhall's place is looking usually well. His roses are partly off crop, but everything has a thrifty appearance and his violets would be hard to beat anywhere. He also has a bench devoted to pansies that would be hard to beat, some of the blooms measuring $3\frac{1}{4}$ inches in diameter. An unusually fine strain of cineraria just coming into bloom was noticed.

At *Fred Busch's* vegetable farm we found everything looking well. His large house, 300x60 feet in dimension, a description of which was noted last summer, is filled with tomatoes of the *Lorillard* variety. The plants are from 8 to 10 feet in height, well covered with fruit in all stages of maturity. He has been picking from this house since November and will have a continuous crop until next July.

In his other houses are lettuce and radishes, while later on rhubarb, cucumbers, etc. will be in readiness. He is also growing mushrooms quite largely. His experiment with one bed was very interesting. The spawn was planted in September followed by intensely warm weather when the temperature of the soil ran up to 120° and of the air to 110°. This he supposed completely killed the spawn, but a few weeks since when he went to respace the bed he discovered signs of life, and now has a fine crop of mushrooms to harvest. This would indicate that intense heat is not injurious to the spawn, as it only seemed to check and not to kill it.

He finds the worst enemies of vegetables growing to be club root, insects, mice, blight and mildew, and each one receives its proper remedy at his hands.

Mr. Frank Berry of Stillwater was a recent caller and reports business good. FELIX.

Rochester, N. Y.

This week nobody complains of trade being dull, and prices have advanced somewhat over last week's in all directions. Roses and carnations especially are much in demand, and are not overplentiful in supply. The same may be said of violets, valley and *Von Sions*, while tulips, hyacinths, etc., are plenty but move readily. Nearly all the storemen have had some rather busy days, furnishing decorations for balls, receptions and dinners. *Salter Bros.* had several of them lately, which called for large quantities of cut flowers. *Kellers* also furnished plant and floral decorations the past week on two or three occasions, though the orders in the latter cases called principally for plants and greenery instead of large quantities of cut flowers. Orders for funeral work also were more numerous; a goodly number of

the larger and more elaborate designs was the rule and white flowers of every description were used up. Noticable was the demand for white carnations, all available stock of these disappeared soon after coming in. In our vicinity the carnations with few exceptions have not done as well this season as usual; whatever is the reason, perhaps the past unfavorable dry summer has something to do with it.

Mr. Geo. Savage is now recovering from his severe illness, and although he looks thin and pale yet, will in the near future be able to attend to his duties again. His orchid houses at present look gay with bloom, his dendrobiums are especially noteworthy, the canes of *D. nobile* being set with flowers over half their length, and most of the varieties are of very remarkable colors. *D. n. nobiliss* leads them all in richness of color, closely followed by *D. n. Sanderianum* and *D. n. cœrulescens*, all shades are represented down to a pure white variety. *D. Phalaenopsis Schœderianum* is still represented in great quantities and extra large spikes, the large specimens of *D. Wardianum* are also beginning to flower, and in a few weeks will be at their best. A large variety of cypripediums are in flower, among them several very promising seedlings raised by Mr. Savage. The angræcums, variegated cattleyas and phalaenopsis also are in good shape at the time of writing and I must say it is quite a treat to the casual visitor examining this extensive collection. J. B. K.

Montreal.

The usual winter openings of the private conservatories commenced on the 1st inst. The only one the writer found time to visit last Saturday was that of Sir William Van Horne on Sherbrooke street. It stands directly east of the residence on the street front, and is of very modest design outside, it having no architectural decoration whatever. Inside, while in style of decoration it stands unique among the conservatories of Montreal, it is certainly very artistic; the design is in imitation of a sub-tropical garden, there being no benches whatever visible. Around the walls the piping is concealed by a bank of clinkers and cement, among which *Ficus repens* and various creepers of a similar nature run at will, there being here and there pockets where large specimens of different varieties of ferns are plunged, the pots being entirely hidden. Peeping out from among the ferns are scores of choice specimens of such plants as *Cyanophyllum magnifica*, *Maranta zehrina*, *Alocasia metallica*, *Anthurium crystallinum*, etc. At the middle two immense dry trunks of cork rise along two rafters and meet at the ridge, about thirty feet from the ground. They are made of blocks of cork fastened to the iron trusses by copper wire and are thickly hung with various orchids. In the middle of the house is a very large *Latania borbonica*, a large *Alsophila regalis* and a few large seaforthia and other palms, the pots of which are concealed in a bank of ashes, which is also concealed by creepers and low growing plants. I will not begin to enumerate all the rare tropical plants to be found in this group.

The pathway around the house is crooked all the way, giving a very natural appearance. It is of gray cement, which to our mind looks better than the rich tiles so often met with. There is a large collection of orchids on this place, but at the time of our visit those in bloom were a *Phajus grandifolia* with 24 spikes,

Vanda cœrulea, several *Cattleya Triaræ*, one noticed with 22 blooms; *Cœlogyne cristata*, several *dendrobiums*, *Oncidium splendens*, *Phalaenopsis Schilleriana*, *Angæum sesquipedale*, etc. The four largest and most perfectly shaped azaleas we ever saw are in the corners; they measure from three and a half to five feet across each, and were literally covered with bloom. The plan of this house was designed by Mr. Wm. Holliday, the present gardener, and executed under his immediate supervision; he is justly proud of his work. BEAVER.

Grand Rapids, Mich.

In the notes from this city on page 690 of our issue of February 1 in referring to the returns for carnations received by Messrs. Hopp & Linke the interrogation point in parenthesis should have been an exclamation point. The intent was to emphasize and not to question. As printed the line might be construed as throwing doubt upon the statements of Messrs. H. & L., and though their standing is such that a correction seems hardly necessary we make this explanation in justice to ourselves.

Oswego, N. Y.

Trade has been remarkably good here this winter, the demand being in excess of the supply, and more than one florist has had to refuse orders. Prices have been good. There is great activity just now preparing for the Easter trade, which bids fair to break previous records.

Walter Workman is building another house 54x14; this makes the third addition in two years. H. V.

Trouble With a Flue.

I have recently built a flue 100 feet long and 8x8 inches inside. The smoke stack is 25 feet high, of galvanized iron and 8 inches in diameter. In damp weather it does not draw perfectly. Can some one tell me the cause of the trouble?

D. E. D.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

Seed case cost \$70. Call or address W. B. WOODRUFF, Florist, Westfield, N. J.

Lenox, Mass.

Rosy cheeked youth and beauty such as only the glorious air of the Berkshire Hills can produce romped and made merry at the hall of the Sedgwick Annex at Lenox on the evening of January 29. It was the second annual ball of the Lenox Horticultural Society, and the affair had been the all-engrossing subject among the boys for a month past. The hall was tastefully festooned with evergreens studded with many colored electric lights and the walls and pillars decked with laurel and hemlock boughs. The guests were welcomed with characteristic hospitality, and everything was done to ensure the highest enjoyment for everyone. Pittsfield, Lee, Stockbridge, Dalton and the neighboring towns were well represented, and there were present from a distance W. A. Manda, South Orange, N. J.; C. B. Weathered, W. R. Phillips and P. O'Mara, New York; A. T. Boddington, Short Hills, N. J.; W. H. Wallace, Hartford, Conn.; and W. J. Stewart and T. J. Grey, Boston. The occasion was the second anniversary of the formation of the society. The little band of a dozen earnest gardeners who met two years ago in Mr. Huss' cozy little office has grown to a large and prosperous society, and its prospects are exceedingly bright.

I GROW as fine a Collection of

DAHLIAS

as it possible to obtain, of both old and new varieties. If you want a choice collection for a special purpose, I have studied your business and can give you varieties suitable to your purpose.

Address THE AMERICAN FLORIST CO., Chicago.

Mr. J. A. PETTIGREW, lately superin-
tendent of the parks of Milwaukee, Wis.,
and formerly superintendent of Lincoln
Park, Chicago, has received appointment
as General Superintendent Department of
Parks, Brooklyn, N. Y., and will take
charge of that office March 1.

THE ROYAL SOCIETY of Horticulture
and Botany of Ghent, Belgium, has
issued schedule of their 162d horticultural
exposition, to be held November 15-17
next. Prizes are offered for chrysanthem-
ums, orchids and ornamental plants.
This is always one of the finest shows of
the Old World, and a matter of great
interest to European flower lovers.

THE SCHEDULE OF PRIZES offered by the
Massachusetts Horticultural Society for
the year 1896 is now published, and may
be obtained from the secretary, Robert
Manning. The sum of \$8,050 has been
appropriated for prizes and gratuities
during the year. The chrysanthemum
awards will be made in accordance with
the scale recommended by the American
Chrysanthemum Society.

THE MANY friends of Treasurer H. B.
Beatty of Oil City will be glad to hear
that on January 22 last he was elected
president of the Manufacturers' Gas Co.
of Pittsburg, Pa., a corporation having
an investment in oil and gas interests of
over one million dollars and doing an
annual business of nearly \$300,000. The
price of the stock of the company ad-
vanced 5 per cent the week following
President Beatty's election.

THE fifth annual meeting of the Ameri-
can Carnation Society will be held at the
Grand Central Palace, Lexington avenue
and 43d street, New York, Thursday and
Friday of next week, February 20 and 21.
An excellent program has been prepared
and the exhibition promises to far exceed
anything of the sort in the past. It will
undoubtedly be a memorable event and
anyone who can attend and fails to do
so will surely regret the lost oppor-
tunity.

THE CHRYSANTHEMUM ALBUM issued by
H. J. Jones, the well known English
chrysanthemum specialist, contains as
frontispiece a portrait of Sir Edwin Saun-
ders, president of the National Chrysan-
themum Society, and 35 full page (12x10
inches) illustrations of new or recent va-
rieties. The pictures are excellent half-
tone engravings, accompanied by descrip-
tion, and the publication is very well
printed and handsomely gotten up; stiff
paper binding. It will prove of much in-
terest to chrysanthemum growers. (Price
two shillings and sixpence. H. J. Jones,
Ryecroft Nursery, Lewisham S. E.,
London).

The boxes as they appear when set up for use.

We make them in a sufficient number of sizes, including for violets, to meet all necessary requirements.

The Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

S. E. BRIGGS, Pres.; T. W. WOOD, 1st Vice-Pres.; ALEX. RODGERS, 2nd Vice-Pres.; A. L. DON, 114 Chambers St., New York, Sec'y and Treas. The fourteenth annual meeting will be held at Niagara Falls, N. Y., June 9 to 11, 1896.

About Warranted Seeds.

Feb. 4th, 1896.

To the Editor of
The American Florist,
Chicago, Ill.:

In THE AMERICAN FLORIST of Feb. 1st, received to-day, your remarks on "WARRANTED SEEDS" seem to me entirely unwarranted by the facts of the case.

After stating that "The American Seed Trade Association and high class seedsmen generally have for the past decade religiously stood by the NON-WARRANTY flag," you say:

"Now for 1896 come certain leading American houses, and for the sake of a little cheap personal glory, advertise '—s Seeds are warranted'."

Perhaps you refer to us, although our position to-day is exactly the same as it has been for many years past, and *always will be*. You will admit that we rank among "high class seedsmen" and that the writer is a member, in good standing, of the American Seed Trade Association, having been elected its president in your own city only three years ago.

Before the American Seed Trade Association was formed and each year since we have warranted our seeds "BOLDLY"—that is, with complete confidence. We have not "hidden our light under a bushel" and only now in 1896 brought it out. On the first inside cover page of our catalogue for many years past we have made in BOLD FACED TYPE a statement similar to that below, which is taken from THE FARM ANNUAL FOR 1896.

BURPEE'S SEEDS

And are WARRANTED First-Class in Every Respect.

—FEW EQUAL AND NONE BETTER.—

WE GUARANTEE that all SEEDS sold by us are FIRST-CLASS, true and pure, and of strong germinating power, in so far that should any prove otherwise we will refill the order free or refund the price paid. Further than this we cannot warrant, but this is a satisfaction given by but few seedsmen, and must convince even those who have never dealt with us of the extreme care we exercise in growing and sending out our seeds.

Surely seed buyers have a right to some reasonable assurance that the seeds they order are first-class!

It is the business of a competent, honest seedsmen to know the seeds he sells and to sell only such seeds as CAN BE warranted.

If the editor of your Seed Trade Department wishes to argue this point before the fourteenth annual meeting of the American Seed Trade Association at Niagara Falls in June next I will enter gladly into the discussion.

I have always thought that the usual disclaimer or non-warranty clause was altogether wrong. It is not fair to the purchaser, and is likely to create carelessness on the part of the seedsmen and his employees.

[We gladly publish the above from Messrs. Burpee & Co. as indicating how far and to what extent the article in our issue of February 1 applies or does not apply to that house. In this connection we photo-reproduce also Messrs. Burpee & Co.'s adv. as it appeared in February 1 issue of the Farm Journal, Phila., in

NEW BOOK of 184 pages, it is pronounced by papers everywhere THE Leading American Seed Catalogue.

W. ATLEE BURPEE & CO., Seed Growers, Philadelphia, Pa.

which it seems to us the expression BURPEE'S SEED ARE WARRANTED is used boldly, and almost unqualifiedly, and could not be otherwise understood as meaning less than a warranty by the ordinary reader, but we in no way assume to deny any advertiser the right to warrant in this or in any other manner he may choose, but we do mean that this adv. as printed is out of and beyond the bounds set by leading foreign and American houses. Our editorial did not criticise the positions stated in catalogues, but in certain advertisements which we claimed and do claim are misleading, and that the casual reader would expect a "warranty" until enlightened by the reservations made in the catalogue itself.

Mr. Burpee again says in his letter: "It is the business of a competent, honest seedsmen to know the seeds he sells and to sell only such seeds as CAN BE warranted."

The leading authorities of the world agree that to warrant seeds in the sense of being responsible for the crop is little less than quackery; and if they are right the word "WARRANT" should always be qualified with the words "so far as to repay the value should the seed fail," or

give below the views of a few leading foreign and American seed houses declining to "WARRANT" in any manner as expressed in their latest catalogues:

PARIS, FRANCE.

Vilmorin, Andrieux & Co. say:

We beg leave to observe that all our goods are

If You Garden for Profit

you can save money and should buy at Wholesale Prices, as quoted in BURPEE'S BLUE LIST for 1896. It is mailed FREE to Market Gardeners every where, who, while entitled to the lowest prices possible, should be sure always to get Only the Best Seeds that Grow! BURPEE'S SEEDS are WARRANTED, —few equal, none better— and are annually sold direct to many more planters than are the seeds of any other growers.

NEW BOOK of 184 pages, it is pronounced by papers everywhere THE Leading American Seed Catalogue.

W. ATLEE BURPEE & CO., Seed Growers, Philadelphia, Pa.

sold delivered and payable in Paris, that all difficulties arising are to be decided according to the law of France, that we give no warranty express or implied as to description, quality, productiveness or any other matter connected with seeds or bulbs we send out, that we will not be in any way responsible for the crop and that in no case and under no circumstance we will be responsible beyond the price invoiced for each article.

LONDON, ENGLAND.

Hurst & Son say:

Messrs. Hurst & Son give no warranty expressed or implied as to description, quality, productiveness or any other matter of any seeds sent out and will not be, in any way, responsible for the crop. If the purchaser does not accept the goods on these terms they are at once to be returned.

ERFURT, GERMANY.

Ernst Benary says:

Ernst Benary sends out only seeds that will, to the best of his belief, give entire satisfaction; it must, however, be expressly understood that, immunity from error being unattainable and success more often dependent on climatic or local influences than is generally supposed, he warrants neither description, growth nor productiveness of any seeds he sells, nor will he hold himself in any way responsible for the crop. E. B. will take it for granted that all who order from him do so with a full knowledge of the preceding.

READING, ENGLAND.

Sutton & Sons say:

Non-warranty.—We wish it to be distinctly understood that although we continue to take all possible pains to supply only new, genuine and unadulterated seeds, we will give no warranty express or implied as to description, quality, productiveness or any other matter of any of the seeds we send out and will not be in any way responsible for the crop. Every order received for articles named in this catalogue will be executed on these conditions only.

NEW YORK, N. Y.

J. M. Thorburn & Co. say:

Warranties.—Seeds of the best possible quality will fail through improper treatment. Thus, if a small seed be sown so deeply that the young plant cannot reach the surface, the seed, however good, will fail. More failures result from a want of proper knowledge of conditions necessary to germination than from bad quality of seeds themselves. These conditions are, a proper temperature, sufficient moisture and free access of air; besides these, the soil must be in proper condition and present no physical obstacle to the growth of the young plant. If heavy rains have compacted the surface of the soil, and the sun has baked it to a hard crust, it will be impossible, even if all other conditions are favorable, for the seedling plants to force their way through it, and many perish from this cause alone. Seeds differ greatly as to the temperature required for germination. Beets, cress, peas, etc., germinate rapidly at a temperature of 45°; but if melons and other seeds of that family, bush or pole beans, and other plants of sub-tropical origin, are sown under the same conditions, they will be apt to decay, as for their prompt germination they require a heat of at least 60°. For this reason many seeds fail yearly from too early sowing. The second condition, proper moisture, is likely to be violated by an excess rather than by too little moisture. The proper amount is that which a well-drained soil will naturally hold. Free access of air is all-important, and this is interfered with by an excess of water in the soil. In germination complex chemical changes take place in the seeds, in which the seed performs an important part. A portion of the seed is consumed, carbonic acid gas being given off in changing the starch and other constituents of the seed into nutriment to forward the growth of the germ or embryo plant, which depends upon the contents of the seed until it has formed roots below ground and

some similar phrase. But of what little value to the planter is the repayment to him of \$2.50 when the many acres planted from one pound of cabbage seed fail him in a crop. Of what value to him is the "WARRANT" which offers him as a recompense the paltry \$2.50 paid for the seed. It may be truly said to

"Hold the word of promise to the ear
And break it to the heart."

Messrs. Burpee & Co. need not claim to be the only firm so advertising, as page 30 of the Farm Journal, February 1 issue, shows the words "WARRANTED SEEDS" in much bolder type than Messrs. Burpee & Co. use, while page 31 shows two other advertisements of warranted seeds. The point made in our editorial therefore is four times illustrated in that one publication, and we intended and still intend our criticism to be a general one, believing that the summary of opinions of the leading seedsmen of the world does not justify the use of the word "warranted".—[Ed.]

Non-Warranty.

In connection with the foregoing we

leaves above, and is able to sustain itself. Besides these conditions, affecting the germination of the seed, the young plants, after they have made their way to the surface, are liable to various accidents; a sudden current of very cold air, or a continued drying wind, may check their growth, or destroy the young plants altogether. In addition, there are numerous insects, both below and above ground, that may attack the plants, some of these being so small that they often destroy a crop before they are discovered. For the above reasons, we wish to state in this explicit form, that, while we exercise great care to have all seeds pure, reliable and true to name, our seeds are sold without any warranty, expressed or implied, and without any responsibility in respect to the crop. If our seeds are not accepted on these terms, they must be returned at once.

DETROIT, MICH.

D. M. Ferry & Co. say:

Guarantee.—Complaints made that seeds are not good, should quite as often be attributed to other causes as to the quality of the seeds. There are hundreds of contingencies continually arising to prevent the best seeds always giving satisfaction, such as sowing too deep, too shallow, in too wet or too dry soil; insects of all descriptions destroying the plants as soon as or before they appear; wet weather, cold weather, frosts, chemical changes in the seeds induced by temperature, etc. For the above reasons it is impracticable to guarantee seeds under all circumstances.

In producing and handling our seeds we take every possible precaution to have all of them of the highest quality, but we give no warranty, express or implied, as to description, purity, productiveness, or any other matter connected with any seeds we send out, and we will not be in any way responsible for the crop. If the purchaser does not accept the seeds on these terms they must be returned at once, and any money paid us for them will be refunded.

COLUMBUS, OHIO.

A. W. Livingston's Sons say:

Guarantee.—Complaints made that seeds are not good should quite as often be attributed to other causes as to the quality of the seeds. There are contingencies continually arising to prevent the very best seeds always giving satisfaction, such as sowing too deep, too shallow, in too wet or too dry soil; insects of all descriptions destroying the plants as soon as or before they appear; wet weather, cold weather, frosts, chemical changes in the seeds induced by temperature, etc. For all these reasons it is impossible to guarantee seeds under all circumstances, and, while we exercise the greatest care to have all seeds pure and reliable, we do not give any warranty, expressed or implied. If the purchaser does not accept the seeds on these terms and conditions they must be returned at once and the money that has been paid for the same will be returned. We test our seeds before sending them out, and should they fail to grow when properly tested by the customer we will replace the same amount or give value in others. We cannot afford, knowingly, to send out seeds doubtful as to vitality or purity, and you can get no better stocks of any seedsmen, even though he deceitfully professes to warrant seeds, which frequently covers nothing but the amount paid for the seed. A guarantee from an irresponsible seedsmen is of no value whatever.

PHILADELPHIA, PA.

D. Landreth & Sons say:

NOTE.—While we exercise the greatest care to supply every article true to name, and of the very best quality, we wish it distinctly understood that we do not warrant our seeds and that we are not, in any respect, responsible for any loss or damage arising from any failure thereof.

PHILADELPHIA, PA.

Henry A. Dreer, Seedsman, says:

Non-warranty.—We wish to be distinctly understood that although we continue to take all possible pains to supply only new, genuine and unadulterated seeds we will give no warranty, express or implied, as to description, quality, productiveness or any other matter of any of the seeds we send out and will not be in any way responsible for the crop. Every order received for articles named in this catalogue will be executed on these conditions only.

WARRANTY.

As inclining to warranty yet disclaiming any responsibility beyond refilling order or sending seed of same value we give the following: (Note the italics "*in so far*" and "*so far as that*,"

MARLBLEHEAD, MASS.

J. J. H. Gregory & Son say:

The Three Warrants.—All seeds sent out from our establishment are always sold under three

warrants, viz.: 1st, that our seeds shall be what it purports to be, *so far as that* we hold ourselves ready to refill the order anew, or to send other seed to the same amount, gratis, should it prove defective in any respect.

What is there to gain by selling poor seed after having made this warrant? 2nd, that all money sent for seeds over one dollar shall reach us if sent by Postoffice Order on Marblehead, Express Money Order, Registered Letter, Draft, or Cashier's Check. Sums of one dollar and under may be sent at our risk. 3rd, that the seed ordered shall reach every one of our customers. Thus we warrant everything but the crop, and make the purchase of seed the safest investment possible, instead of being what it has so often proved to be, very unreliable and vexing.

MINNEAPOLIS.

Northrup, Braslan, Goodwin Co. say:

Our Warrant. Vegetable and flower seeds sold from this catalogue are warranted to prove of strong growth and of satisfactory quality and purity, *in so far* that, should the contrary prove the case, through and defect in the seed, we will refill the order for such defective seed free of charge, or refund the money paid us for it. Grass and Field Seeds.—With our improved machinery we are enabled to clean these seeds so thoroughly that we sell them on the following conditions: If upon arrival and prompt test they do not develop a high percentage of growth, or fail to prove of satisfactory purity under microscopic examination, they are to be returned at our expense. Beyond these plainly expressed conditions we give no warrant whatever, as the outcome of a crop is beyond human control; but as these are the strongest warrants made by any seed house they should satisfy the most careful purchaser of the confidence we have in our ability to supply good seeds.

PHILADELPHIA, PA.

Wm. Henry Maule says:

Guarantee "4."—I guarantee my seeds to be just as represented. If they prove otherwise I will refill the order free of charge; but it must be understood that I do not guarantee the crop any further than to refill the order.

Still another view:

ROCKFORD, ILL.

R. H. Shumway says:

HONEST SEEDS. In treating this subject with the justice it most properly deserves, I must say, that every seedsmen realizes the fact that it is greatly to his own advantage to sell only the best seeds he can obtain. I do not believe that seedsmen are intentionally dishonest. All of them intend to offer good seed, but the most frequent cause of failures with many firms is they carry over too many seeds. When a large quantity of old seeds is mixed with a small quantity of new crop it makes the entire supply too unreliable for the use of our gardeners. I have always made it a fine point of accurate judgment to seldom carry over any seeds to such amount that would be considered of any value. Thirty years of constant experience has enabled me to judge very closely of what amount I can use of each variety. Last season I had 5,000 pounds of Red Wethersfield Onion, and I did not carry over a pound. Of many varieties from 100 to 1,000 pounds each; I did not have over a few ounces left. I make the positive boast every year, that I clear out my stock closer than any seedsmen in the world, and have often sold seeds late in the spring and early summer at half the price I paid for them to accomplish my determination. It gives me the advantage of handling a fresher stock of seeds than any seedsmen in the world. When the excessive anxiety and labors of the day have passed it is a great pleasure and satisfaction to know that I have been dealing honestly with my fellow-men, and when overcome with exhaustion by constant toil I can go to peaceful sleep which does not border on dishonesty. If I had practiced any dishonesty in my business to secure wealth I believe that misfortune would have surely overtaken me and I would not become the owner of the largest mail trade in the world.

Another Letter from Mr Burpee.

PHILADELPHIA, PA., Feb. 10, '96.

To the Editor of

THE AMERICAN FLORIST, Chicago:

Dear Sir:—We acknowledge receipt today of your courteous favor of the 7th inst., and are glad to learn that you will give this matter of "WARRANTED SEEDS" a full discussion in an early issue of the AMERICAN FLORIST. We hope the same subject may be brought before the next annual meeting in June of the American Seed Trade Association. If the writer can arrange to return in time from a spring trip to California we purpose then

to recommend a resolution worded somewhat as follows:

We warrant all seeds sold by us to be first-class, pure and true to name, *in so far* that should any prove otherwise we will refund the price paid. The success of a crop depends, however, upon so many causes, beyond control of either seedsmen or planter, that we assume no responsibility further than the price paid for the seed. We test all seeds both for vitality and purity; should any mistake occur as will be shown the same season by the records of our trials, we will refund the amount paid. Further than this no responsible seedsmen can warrant. We solicit orders only from planters who have confidence in our trustworthy and careful business methods. Should any seeds purchased from us not be accepted under the conditions named they are to be returned immediately in unbroken packages, when the amount paid will be refunded.

In our opinion, if this subject were properly presented, every honest, self-respecting seedsmen should be willing thus to warrant his seeds—notwithstanding the general custom at present is to the contrary. If a reputable dealer sells half-cotton goods for all-wool he will make it right; should the standard of mercantile honor among seedsmen be lower than among tailors?

While we exercise every precaution to avoid error it has been our custom always should a mistake occur in selling seeds, either at retail or wholesale, to refund the price paid. For instance, some years ago when our contract crops of American Wonder peas were very short we purchased some from a grower whose statements we believed. Ten bushels of these were sold to a prominent Philadelphia seedsmen, Henry A. Dreer. Both his trials and ours showed that we had been deceived, and that the peas were only Little Gems. Of course we allowed his claim, although we could recover nothing from the grower who had sold the peas under false representations to us. We think that most other honorable houses, even where protected by the non-warranty clause, would likewise have allowed a similar claim.

The AMERICAN FLORIST is a trade journal of national influence, and a full discussion of "warranted seeds" will be of wide interest, both in America and Europe. We are glad, therefore, that the question was raised, although at first we felt aggrieved at what seemed an unwarranted criticism of our position, which has been the same for so many years.

Yours truly,

OBITUARY.

RICHARD FROTSCHER.

It is with deep regret that the death of this well known New Orleans seedsmen is announced. Mr. Frotscher appeared well up to within a few days of his demise, when pneumonia set in, resulting fatally. He was 63 years old.

Mr. Frotscher was a native of Leipzig, Germany, coming to this country when a young man. He first went to Philadelphia, then to New Orleans, where he conducted his long established seed business. He was highly esteemed for his character and benevolence, and leaves many friends. He was connected with several public enterprises, being for 25 years a director of the Teutonia Insurance Co., and was also connected with the Society for the Assistance of German Immigrants, the German Protestant Association, Garden

ers' Protective Association, N. O. Hort. Society, and was the pioneer member of the Park Commission. He leaves a widow and family. His funeral was largely attended, the floral offerings being numerous and beautiful.

HARRY PAPWORTH.

J. WILDER & Co., seedsmen, Cincinnati, have assigned.

THE California seed crops are reported as improved by recent heavy rains and generally in good condition though nearly two months late.

THE MAIL ORDER business is said to have about held its own in January; but increased the first ten days of February, the orders being more numerous though hardly as large as in former years; the open weather may in part account for increased trade.

VISITED CHICAGO: E. M. Parmelee, of the John Allan Seed Co.; Edward Morris, lately with the Sunset Seed Co., San Francisco; K. F. Kaan, representing C. J. Joosten, New York, N. Y.; W. G. Langbridge, Frank T. Emerson, Henry A. Salzer.

Catalogues Received.

J. W. Austin, Pilot Point, Tex., nursery stock; Cole's Seed Store, Pella, Iowa, seeds; Wm. Rennie, Toronto, Ont., seeds; John Gardiner & Co., Philadelphia, seeds; Lee-Kinsey Implement Co., Denver, Colo., seeds; McCornac & Co., Paterson, N. J., carnations; R. & J. Farquhar, Boston, seeds; F. H. Horsford, Charlotte, Vt., hardy plants; Texas Seed and Floral Co., Dallas, Tex., seeds; Haage & Schmidt, Erfurt, Germany, seeds.

Sunset Seed and Plant Co., San Francisco, seeds and plants; The Geo. H. Melien Co., Springfield, O., seeds and plants; Currie Bros., Milwaukee, Wis., seeds and plants; J. L. Dillon, Bloomsburg, Pa., plants and rooted cuttings; W. Piercy, Forest Hill, London, chrysanthemums; Frank Banning, Kinsman, O., seeds and plants; Ben Hains Co., New Albany, Ind., trade list plants; W. W. Barnard & Co., Chicago, seeds; Griffith, Turner & Co., Baltimore, Md., seeds; Ben Hains Co., New Albany, Ind., seeds and plants; Vilmorin Andrieux & Cie, Paris, France, seeds; Louis Vieweg, Quedlinburg, Prussia, new rose; D. E. Dortch, Columbia, Tenn., plants; H. J. Jones, Lewisham, England, chrysanthemums.

H. F. Michell, Philadelphia, retail list seeds; same, wholesale list seeds; E. G. Hill & Co., Richmond, Ind., plants; W. Atlee Burpee, Philadelphia, trade list seeds; Z. D. Forest Ely & Co., Philadelphia, wholesale list seeds; Wood Bros., Fishkill, N. Y., trade list plants and rooted cuttings; Pitcher & Manda, Short Hills, N. J., seeds and plants; same, quarterly trade list; J. N. May, Summit, N. J., trade list plants; Pomona Nurseries, Parry, N. J., nursery stock; Rivoire Pere & Fils, Lyons, France, seed novelties; G. Hancock & Son, Grand Haven, Mich., carnations; Tillinghast Bros., La Plume, Pa., seeds; A. B. Davis & Son, Purcellville, Va., plants; The Goulds Mfg. Co., New York, spraying machinery; D. M. Andrews, Boulder, Colo., hardy plants; N. Smith & Son, Adrian, Mich., chrysanthemums and carnations.

WE HAVE RECEIVED from Mr. Chas. S. Swayne, Kennett Square, Pa., a bunch of very fine Lady Campbell violets. As grown by Mr. Swayne Lady Campbell is certainly an excellent violet of extra large size and good color.

SWEET PEAS

The choicest and most complete collection in the world. By keeping **Purity** and **High Quality** our first consideration, rather than low prices, we have become recognized as **HEADQUARTERS** for SWEET PEAS. In the following list we enumerate our **Unequaled Collection of Ninety-four named varieties.**

BLANCHE BURPEE SWEET PEA.

This superb new white variety must be regarded as the finest of all the white Sweet Peas, beating even the famous "Emily Henderson" in form and size, and is of a pure white color. It was raised by Mr. Eckford, and was named **BLANCHE BURPEE**. Mr. Burpee is an eminent American horticulturist, and has taken great interest in Mr. Eckford's fine Sweet Peas, and is introducing them to a considerable extent in the United States. I have repeatedly seen the variety in flower at Wem and at various exhibitions, and compared it with existing varieties, and in its grand, well-formed, stout standard its great excellence is particularly seen.—*From THE GARDENERS' MAGAZINE, London, England, November 24, 1894, prior to introduction in 1895 of Eckford's New Giant White.*—**BLANCHE BURPEE**. Received an **Award of Merit R. H. S., London, 1895.**

Wholesale Prices:—Per oz. 30 cts.; $\frac{1}{4}$ lb \$1.00; per lb \$4.00.

In the list above the **SWEET PEAS IN CAPITALS** are either Novelties of 1896 or now first offered by weight, while the varieties in **bold-faced type** are also specially recommended. Each variety is pure and true to name,—vastly superior to the "Cheap Seed" now so largely grown, without proper care in the constant selection that is absolutely necessary to maintain first-class strains.

BURPEE'S BLUE LIST for Florists and Market Gardeners is mailed **FREE** on application. If not already received, write **TO=DAY**. It offers only the **Best Seeds that Grow** and the prices are low. There are no better Seeds than **BURPEE'S!** Have you read **THE FARM ANNUAL FOR 1896?**

W. ATLEE BURPEE & CO., Philadelphia, Pa.

WE HANDLE
ONLY

Seed

that are especially grown for a critical Market Garden and Florists' trade. There are tons of seeds grown to sell cheap. You don't want them if your living or your satisfaction in life depends on the result. In our

ASTER SEED.

SEMPLE'S STRAIN of Asters, the best and only strain for florists to make money out of the cut flowers. Large flowers like chrysanthemums, long stems and exquisite colors, excellent for growing inside in summer. Flowers bringing from \$1.50 to \$3.00 per dozen. Read the following from Randolph & McClements:

PITTSBURG, January 14th, 1896.
MR. SEMPLE, Bellevue, Pa.—"The Aster Seed purchased from you produced the finest flowers I ever saw. Under glass in summer they will make the best summer flower we can get, producing flowers 4 to 5 inches in diameter."
Yours truly,
RANDOLPH & McCLEMENTS.

E. B. JENNINGS, Pansy Grower,
Lock Box 254, Southport, Conn.

Louisville, Ky.

The complaint about good stock being a scarcity in the market is general and is heard on all sides. The growers, of course, blame it all on the weather, which has been such as to preclude all possibility of growing choice flowers. This has been a great drawback and inconvenience to the retailers, for business, despite their expectations, has been rather brisk during the month of January.

The death of Judge Jackson, closely followed by that of the mayor of the city, has furnished the florists with plenty of work in the way of funeral designs. Among others, F. Haupt turned out some large and elaborate pieces. Nor was there any standstill in "society events," which have kept the florists hustling.

A thing seldom heard of in the northern states is normal school graduating exercises in January. Such an event, however, took place here during the past month. The Library hall was handsomely decorated for the occasion and numerous flowers in the shape of bouquets, baskets, etc. were presented to the graduates.

Messrs. Lewis & Gilbert, the 4th avenue florists, are about to build two more houses, one 130x20 for carnations and the other one 100x12 for violets. This firm has met with exceptional success during the comparatively short time they have been in business.

Miss Maggie J. Gorman has removed to 227 West Jefferson street, and reports business quite encouraging.

The finest paper white grandiflora grown in this section comes from Mr. Wm. Mann's greenhouses. These are exceptionally fine and well grown.

DENYS ZIRNGIEBEL, Needham, Mass.

PROFITABLE SWEET PEAS.

FROM careful personal inspection of all the new and old varieties in the famous pea growing districts in California, and from actual selling qualities shown in the San Francisco Flower Market—the largest in the world for this flower—we find the following seven kinds, for size, stems, prolific habits and other most desirable qualities unequalled. They comprise the leading salable clear colors which are always appreciated. Fill seven vases each with 100 sprays of these, and set them in a row in your window, and you need fear no competition in your trade on this flower.

BLUSHING BEAUTY, clear Daybreak pink.

HER MAJESTY, pure solid rose.

IF BUSINESS DONE be an indication of where you can be best and most satisfactorily served, **read this statement:** 2000 Commercial Florists buy Carnation Cuttings from our establishment. During season of 1895, we sold and shipped 250,000 Carnation Cuttings and Plants. Since our business was established in 1893, we have sold and shipped nearly 500,000 carnation plants and cuttings. We have already placed orders for One Hundred Thousand Plants and Cuttings for this season's delivery. We aim to make make our total sales of Carnation plants and cuttings amount to three-fourths of a million at the close of this season.

All florists who desire to purchase really First-Class stock will be conscientiously served if they assist us by favoring us with their orders.

REMEMBER—We do not try to grow or sell cheap stock. Fine, strong, healthy plants for our customers is our motto. We will give you full value for your money. We will please our customers.

OUR CATALOGUE AND TRADE LIST IS NOW READY, AND WE WILL SEND THEM UPON RECEIPT OF YOUR ADDRESS.

C. W. WARD, Manager.

THE COTTAGE GARDENS, Queens, L. I., N. Y.

Long Island Railroad Time Table.

All trains leave via Long Island Ferry, foot of East 34th Street, which is reached by the **42d Street and Boulevard Cars.**

Go **one block below Grand Central Palace** and take **Green** or **White car going East.** You can reach **Queens** in 50 minutes from the Grand Central Palace.

TRAINS LEAVE FOOT E. 34th STREET (via boat) FOR
QUEENS AS BELOW:

6:30 A. M.
8:00 "
8:50 "
10:50 "
12:50 P. M.
1:50 "
3:20 "
4:20 "

**ARRIVING AT QUEENS ABOUT
40 MINUTES LATER.**

RETURNING.

LEAVE QUEENS FOR LONG ISLAND CITY:

6:55 A. M.	3:23 P. M.
7:20 "	4:30 "
7:54 "	5:04 "

Every florist visiting New York City is cordially invited to visit **THE COTTAGE GARDENS.**

During Thursday, Friday and Saturday, special wagons will meet each train at Queens and convey visitors to and from the greenhouses.

On **SATURDAY** all remaining in the city are specially invited to take the 8:50 A. M. train which will be met with wagons and the following route pursued: First to The Cottage Gardens Greenhouses, thence to C. H. Allen, Floral Park, thence to John H. Taylor, F. H. Storm, Wm. Bell and other Bayside florists, thence by train via Flushing where the places of Jno. Henderson Co., H. C. Rath and other Flushing growers may be visited.

Everybody, without exception, will be cordially welcomed by

C. W. WARD.

A NEW BRAND OF CARNATION JUICE (first brew) WILL BE OPENED, AND ALL MEMBERS OF THE CRAFT WILL BE EXPECTED TO PASS UPON THE ADVISABILITY OF ITS INTRODUCTION AS A NOVELTY.

You will benefit the American Florist by mentioning it every time you write an advertiser in these columns.

CARNATIONS.....

DELLA FOX and ANNIE H. LONSDALE

invite you to call at their home and see them whilst you are at the American Carnation Society at New York. It will pay any grower to spend the time to visit these sterling varieties; there is nothing like them under cultivation in this country. You will find them the best investment you ever made. Not croppers, but always in bloom, from Aug. to the following July.

COME AND SEE THEM.

One Hundred Dollars in Cash Premiums will be offered for the best 50 blooms of **DELLA FOX** in the fall of 1896—divided in the four largest cities in the U. S.

ROOTED CUTTINGS. Price: Less than 100, \$12.00 per 100. 100 @ \$10.00 per 100. 1000 @ \$75.00 per 1000. **READY MARCH 1st, 1896.** No orders will be booked unless cash accompanies order or satisfactory reference given. Sample cut blooms will be sent to florists' clubs only on application.

MYERS & SAMTMAN, Wyndmoor, Chestnut Hill, Phila.

Trains leave Reading Terminal 12th and Market Streets: A. M. 7:10, 7:40, 8:10, 8:40, 9:10, 9:40, 10:10, 11:10. P. M. 12:10, 1:10, 2:10, 3:10, 3:40, 4:10, 4:40. And returning from Wyndmoor every 30 minutes.

De Longpre's Flower Show.

A flower show without any water or dampness, with no danger of cuttings being stolen and in which all the specimens are for sale is what has been going on in Philadelphia. The flowers were painted by Paul de Longpre, the acknowledged master in floral water color work, yet they are so natural one can hardly believe them paintings only.

Mr. de Longpre's 'mums are up to date especially in price. One, "A Handful of chrysanthemums," is figured at \$175, and others are about the same. Just think of sticking some "Geraniums in a Blue Mug" and taking \$100 for the outfit! "A Box of Pansies" not a very big box either claims \$150, while a "sold" card appeared on a frame of "Snowballs and Bumble Bees" at \$200. It is quite evident that we poor florists and printers are totally outclassed, unless we could gather in some water-color seeds, or plant some de Longpre cuttings.

The artist evidently loves his work and does not, either, as do some, despise florists' productions. He sees and fastens the glorious American Beauty into a frame, as well as appreciates dendrobiums and lilies. Nasturtiums and Easter lilies are as exquisitely shown as daisies, cherry blossoms and wild carrot. There is a perfection of detail and exact truth to nature in the work that charms and pleases the critic. The fuzzy impressionism is absent and de Longpre sees, apparently, all the points which any of us appreciate, adding the art which makes the picture.

J. H. McF.

SLOATSBURG, N. Y.—A rain storm of unusual severity on the 6th inst. caused the Ramapo River to overflow its banks. The water rose to such a depth as to extinguish the fires and flood the green-houses of W. F. Allen at this place.

Here's a Snap.

6,000 BEGONIA NIVEA,

AT REDUCED PRICES.

The New Everblooming Apple Blossom Begonia. We have a large stock of this grand winter blooming and summer bedding plant; it being covered with elegant panicles the whole year round, making it a valuable market plant. In color it is of a delicate pink when in bud, expanding through lighter shades to snowy whiteness when in full flower, giving it an apple-blossom appearance, that is unique, and what the ladies call "just lovely."

In order to make room, and to place in reach of all, we offer 6,000 plants only at reduced rates, if ordered before March 1st, 1896, after which date, prices will be advanced. It is a most vigorous grower, propagates easily, and has come to stay. The plants are well branched, well established and first-class in all respects, and sure to give satisfaction. Up to date florists should secure some of this stock for their floral work.

We guarantee safe arrival in good condition, and extras added to all orders of one dollar and upwards by express. Cash with the order. 50 plants at 100 rates.

JOHN BREITMEYER & SONS, DETROIT, MICH.

NEW SEEDLING CHRYSANTHEMUM

MRS. ADELAIDE WHITE.

We have grown this for three years, and recommend it for exhibition, as specimen plant, or cut bloom. The *Florists' Exchange*, Dec. 7, '95, page 1190, said of it, "The flower is of the hairy Japanese type; the color is entirely different from anything we have seen in that class. The lower florets were deeply suffused with pink, the upper ones being a clear white color; the combination making a pleasing effect."

READY MARCH 15th, 60c. each; \$6.00 per doz.

Orders booked in rotation.

W. MENEILLY & SON,

1218 James Street, SYRACUSE, N. Y.

SMILAX from 2-inch pots, \$1.50 a 100; strong plants by mail, 50c per 100. GERANIUMS from 2-in. pots, \$2.25 per 100. Send for samples. Cash with the order.

FRED. BOERNER, Cape May City, N. J.

M. B. LITTLE, Clens Falls, N. Y.

Will's Show.

Sweet Peas....per pkt, 200 seeds, \$1.00

Pansies..... " 5 " 1.00

Nasturtiums... " 100 " 1.00

One pkt. each of the above FOR \$2.00, by mail, postpaid. Only a limited number of these wonderfully beautiful mixtures to spare this season.

OSCAR H. WILL & CO., Fayetteville, N. Y.

Mention the American Florist when writing to advertisers on this page.

News Notes.

MISSOULA, MONT.—The greenhouse and dwelling of Mrs. Wm. Neill were destroyed by fire January 14. Loss about \$4,000.

BETHLEHEM, PA.—Jacob A. Fries has erected the past year 2 greenhouses each 80x22 feet, one 10x78 feet for John E. Haines to be used exclusively for vegetables.

SHIREMANSTOWN, PA.—The floral department of the firm of H. S. Rupp & Sons will hereafter be conducted as a separate establishment by Jno. F. Rupp. He has about 4,000 feet of glass.

TOLEDO, O.—Cut flowers are very scarce, especially Bride roses and Daybreak carnations. There is plenty of bulbous stuff in now. C. F. ImObersteg is adding a new greenhouse 20x60 to his plant, which he expects to have ready for bedding stock.

BARSTOW, TEX.—The McKillop Co. has been incorporated with headquarters here, to do a seed, plant and nursery business. Capital stock \$20,000. Incorporators: George E. Barstow, Herbert S. Barstow, Providence, R. I.; R. I. Walter, River Point, R. I.; Thomason and R. D. Gage of Reeves county.

ELISABETH, PA.—Caird Bros. have torn down and rebuilt two of their greenhouses, one 24x75 feet and one 16x75. They heat by hot water with a coil of 2-inch pipe in furnace, having a private reservoir or hill with a pressure of about 60 pounds for water supply, and attaching this to hot water, which is the same as an expansion tank. Business has been dull the past few months, carnations very plentiful and poor demand for same.

WASHINGTON, PA.—The A. B. Caldwell Co. has recently started in the florist business, they having about five thousand feet of glass. Their establishment is on the corner of East Wheeling and Lincoln streets. New greenhouses have been built by Wm. Carter, he having houses 20x40 on Wilson avenue. Wm. Wallace has also built new greenhouses 20x30 on Locust avenue heated by hot water. Wm. Sample has new houses 20x40 situated on Locust avenue.

ASPINWALL, PA.—Zieger Bros. have built on corner of 11th street and Eastern avenue, on top of the hill, three greenhouses 20x100, one 10x100, and one 20x70, for growing cut flowers for the wholesale market. The old place corner Eastern avenue and 5th street at the foot of hill consists of two houses 20x100, one 10x100, one 20x20 (20 feet high) for palms and decorative plants. This place is used for growing all kinds of plants mostly for the retail market.

Horticultural Manure

contains more plant-food in *one hundred pounds* than is contained in *one ton* of any natural manure.

Liquid Manure

made from it is cleaner, cheaper and better than from any other source.

In 10, 25, 50 and 100 lb. packages for florists' use. Write for trade prices and pamphlet.

ROBT. L. MERWIN & CO., 88 Wall St., N. Y.

New Notes.

NORTHBROOK, PA.—Percy Barnard has built one new house and rebuilt an old one.

RIEGELSVILLE, PA.—John Stone will add a chrysanthemum house 20x70 this season.

MCGOVERN, PA.—Hugh Holland has added two new houses, one 10x56 and one 20x56.

UNIONVILLE, PA.—Jos. Renard has rebuilt 4 houses, changing heating to overhead system.

LOCKLAND, O.—F. Pentland has put up four new greenhouses 20x80 feet, heated by hot water.

WILLOWDALE, PA.—Rakestraw & Pyle have built two houses 20x100, to be used for growing carnations and tomatoes.

ADA, O.—Henry Young has just completed four new houses, two 80x20, one 80x26, and one 80x12, also a 50 foot propagating house, and boiler house 78x13.

KINGSTON, N. Y.—J. V. Burgevin, son of Valentine Burgevin, has gone in business on his own account as a retail florist and landscape gardener. His place is on Broadway.

EASTON, PA.—W. F. Keller is about completing the second new house started last fall; it will be used for smilax, asparagus, and general stock. A new office and salesroom will be erected at the greenhouse establishment as soon as weather permits.

WYNCOTE, PA.—An extensive range of greenhouses, including a large palm house will shortly be erected on the grounds of Cyrus H. K. Curtis at this place, under the supervision of Edward Campbell, landscape architect, Ardmore, who has the development of the grounds in charge.

ONEONTA, N. Y.—William Kraber the genial foreman from Mrs. S. Scott's establishment, has decided to go into business for himself, and is moving to New Bedford, Mass. where he has rented about 6,000 feet of glass. He intends growing a general stock. He will be succeeded by Arthur Newport, for nine years with Whittle Bros., of Albany, N. Y.

WELDON, PA.—Edward D. Drown has a fine lot of young bedding plants and expects a good spring trade. He also reports a good demand for young ferns and has a good stock coming on. A Victoria does well with him and he will plant a good many more this year. Edward Towell has a fine house of carnations, especially his Wm. Scotts and Day-break. He reports trade good and is building two new houses this spring, one 125x19 and one 75x12. All his houses are heated by hot water under pressure.

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafters, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

Society of American Florists.

Owing to the unfortunate accident to
President Scott the meeting of the execu-
tive committee of the Society of American
Florists which was called for Feb. 25 at
Cleveland has been postponed and will
not be held until Mr. Scott is able to at-
tend. Wm. J. STEWART, Sec.

American Carnation Society.

NEW YORK MEETING.

Bright skies welcomed the carnation
enthusiasts to New York. The low tem-
perature which has necessitated the great-
est care in packing and protecting the
precious exhibits in transportation had
good effects otherwise and on no previous
occasion have the blooms appeared as
fresh and crisp when unpacked.

The palm garden in the Grand Central
Palace proved to be the ideal location for
such an exhibition and the way the
blooms kept in condition on the tables
was a potent demonstration of the claim
often made that the carnation to last well
needs plenty of cool and pure air. The
only serious drawback was the fact that
the space reserved for the meetings was
separated from the exhibition only by a
screen of palms and the buzz of conversa-
tion and stir in the exhibition department
made it next to impossible to hear any-
thing that was said on the platform.

The opening forenoon was spent in
staging the exhibits and social greetings
and it was past noon when Mr. J. N. May
called the meeting to order and introduced
Mr. P. O'Mara, who proceeded to extend
to the visitors a hearty welcome in the
name of the New York Florists' Club.

The first business was the election of
judges. Messrs. Edwin Lonsdale, W. R.
Shelmire and D. Zirngiebel were selected
to judge in classes A, B and C, and Messrs.
Robt. Craig, Ernst Asmus and J. N. May
to judge the seedlings.

President Dorner then proceeded to read
his address which was received with ap-
plause. It was as follows:

President Dorner's Address.

We are again assembled at our annual
meeting in the promotion of our calling
and in the interest of our trade; to ascertain
what progress we have made in the past
year; to deliberate how we further can
advance our interests; if we have made
errors to rectify such.

We have come together to exchange
ideas, compare experiments; have come to
see an exhibition of the products we are
so much interested in, and it will be more
so, as by our good fortune we meet this
year in a section of the country where
floriculture is most forward and where
we expect to see the best ever exhibited at
our meetings. We come together in a
spirit of sociability and I hope that this
spirit will move and pervade our counsels

and deliberations, for only if such a spirit
prevails can our work here, the promotion
of our calling, combined with our business
interests, be successfully carried out.

Sociability loosens the tongue, excludes
haughtiness and arrogance and removes
bashfulness; sociability is the salt and
spice and should be enjoyed as such
wisely; too much or not enough will spoil
every dish and make it unpalatable.
With earnestness, diligence and impartial-
ity spiced with sociability, our meeting
will be a benefit for all and a pleasant re-
membrance for life. Let every one try his
best to make this meeting as interesting
as possible, and especially I would like to
encourage the timid and bashful and let
not their lights be shrouded under these
dispositions.

At and before the incorporation of the
S. A. F., floriculture showed a different
aspect in the management of most estab-
lishments from the present time, a general
culture of most all flowers and plants
being carried on. With the advancement
and progress of our trade came the spec-
ialist. Those specialists, engaged in the
same culture, banded together, moved by
the impulse of progress and protection,
and the so-called auxiliary societies were
formed. The foremost and strongest of
these is our Carnation Society.

At the last convention of the S. A. F. at
Pittsburg, one of the most important
topics was the closer relations of these
auxiliaries with the mother society, for
these auxiliaries are considered the off-
spring of the S. A. F. and it is claimed
they detract too much attention from
them. It is a question yet how far we
can be considered an offspring of the S. A.
F. From its first inception the Carnation
Society stood on its own feet. The fact
that some of the prominent members of
the S. A. F. are also active members of
this society, does not justly intimate the
relationship as claimed by some. I do not
wish to detract the least from the S. A. F.
I am a member myself and I wish every
florist in the country would call himself
one and acknowledge and appreciate the
good it has wrought and is doing at all
times; but I consider these auxiliaries,
and especially our Carnation Society,
more the result of the evolutions in flori-
culture. Progression, our welfare and in-
terests demand a close alliance with the
other branches of floriculture, a union of
all, with the self-management of each. To
give up our integrity as a society of car-
nation growers, to be subordinate, to
come to submission like a refractory
child, we can never do. The S. A. F. with
its wide scope of usefulness, its principle
to embrace all and everything pertaining
to floriculture, should use its influence and
bring about a union; not to take these
auxiliaries under their wings, for our
pinions may prove equally strong, but to
bring about a union of self-sustaining
societies and clubs, to unite all under the

supreme title and government as the S. A. F. It will be well to mention these things, as in all probability overtures may be made by the executive committee of the S. A. F. pertaining to this matter, and it will be equally well if our executive power will learn the sentiment of this society.

I would recommend making some changes in the registration of new varieties. In the amended list of varieties in last year's report are 550 names; some of these immemorial and discarded, new varieties that never found the way beyond the place of the originator, never were disseminated. For instance, I find two of my varieties on the list that never were disseminated and not in existence any more. This large list of varieties of which probably one fourth is in cultivation at the present time is perplexing to any one consulting it. The nomenclature committee has done a great deal in compiling the list and especially their endeavor to find out what is grown most deserves much credit and is to be appreciated. I would like to suggest a separation of the present list of 1895 into the following headings: List of new varieties, not disseminated but entered for registration; list of standard varieties in general cultivation and new varieties advertised for dissemination; list of discarded varieties; and these varieties of which the committee could not receive any information at all be left out altogether.

There is often very much in a name, to enhance the value of the variety, if to signify a certain quality, habit or any other merit desirous to emphasize; such names if found in the discarded list could be used again without running the risk of naming a variety with the name of one in cultivation. It will also help to make the names of standard and new varieties more conspicuous and bring it to the notice of every one consulting this list.

We hear occasionally of depressions in some markets caused by overproduction, times when high grade blooms bring but little and low grades find no market at all. We want better quality and less quantity. The carnation is dear to all lovers of flowers, their keeping quality when properly grown, cut and marketed, is indisputable and it has proven so far good flowers were always sold at fair prices and the overstock of inferior quality cause the glut. Further I believe with a careful systematic cultivation the cropping propensity of many varieties will to a large extent be alleviated and their blooming more evenly divided through the season. This one important point, the result of high cultivation, growing of high-grade blooms is only one, many more could be enumerated, all tending to a betterment, to more steadiness in the markets and the prevention of overstock.

We cannot be too urgent in our endeavors tending in this direction. The demand for high-grade blooms is on the increase. It will involve a little more care and expense and may apparently lessen the quantity. Better returns will justify more expense; and in regard to quantity, when summed up at the end of the season will not fall much shorter than when crowded on in crops on over-filled benches.

Our past is marked by success, our backward glance is one of satisfaction and encouragement; our future, although full of work lies bright before us and I hope that this meeting will be as pleasant and prove as instructive as our former ones have been.

The reading of minutes of the Boston meeting, treasurer's report and secretary's report followed, it appearing that there

are 86 paid up members to date and the treasury is in satisfactory condition.

President Allen then extended an invitation to the members of the Carnation Society and of all organized florists' clubs and horticultural societies to attend the banquet of the New York Florists' Club at the Broadway Central Hotel in the evening and the meeting then adjourned till 2 p. m.

The afternoon session opened with the reading of reports from several florists' clubs on local judging of seedlings, after which a paper by C. W. Ward on "The future of our floral societies" was read by Wm. J. Stewart. W. R. Shelmire briefly endorsed the sentiments expressed by Mr. Ward.

The Future of Our Floricultural Societies.

BY C. W. WARD, QUEENS, N. Y.

Within the past decade, the art of American floriculture has received such an impetus, and the advancement has been so marked, as to excite feelings of genuine enthusiasm in the breast of every lover of plants and flowers who has had an opportunity to compare the past with the present condition of the art. Not a little of this improvement has been stimulated to a certain extent by the organization of the various floral societies that have sprung into existence within the last 20 years. The Society of American Florists, the American Carnation Society, the chrysanthemum and other special societies, and the various horticultural societies as well as florist and gardeners' clubs, have been potent factors, and severally and collectively lent efficient aid to the general cause of floricultural improvement. Not only has this improvement been extended to the art of producing flowers and plants to a greater perfection, but all branches of the trade have received due attention; the social condition of the commercial florist has received some attention, the proper and efficient use of flowers and plants as decorative features has been largely increased, a higher standard of commercial dealings between florists prevails and an extended acquaintance among the members of the craft has been formed. The benefits commercial florists have derived from these associations have been indeed large and the future welfare of all of our horticultural and floricultural associations should be carefully considered, and a concerted effort should be made to increase their numbers, variety and usefulness, as well as to increase the memberships of those now in existence. By a careful study of the past we may in a measure judge of the future, and by avoiding the errors and emulating the successes, we may continue the good work so propitiously begun.

It is a matter of deep regret that within the past three years, one of the largest and supposedly most vigorous of our floral societies has shown such a marked decrease in membership, and its annual meetings have developed such a marked want of interest on the part of its members as to cause serious apprehension as to its ultimate future. In casting about for an explanation of this condition of affairs, the managing members have sought to attribute it to the defection of members to the various societies that have been organized of later date. That this explanation is not born out by the facts may be readily perceived when one considers that the total membership of the later organized societies does not equal the decrease in membership of the

Society of American Florists during the same period, and further that 60 to 75% of the members of the junior societies are still members of the Society of American Florists. Manifestly then, to some other cause must be assigned this decrease in membership.

It has been claimed by some that the people in the vicinity of the location where each annual convention was held joined in large numbers under inducements of the various attractions and under the influence of enthusiasm, and that the next convention being held at a remote place would take up another clientage, while those of the previous year would quietly drop out and stop paying their dues, and it is also claimed that when a convention is held in the vicinity of where one had been previously held, the advance in membership from those localities was small. It has also been said that the exhaustive detailed accounts of the meetings of the S. A. F. which have been spread broadcast by the trade papers have lessened the anxiety to obtain the annual reports of the society. It has also been claimed that when these conventions commenced, many of the florists had never travelled much and that the opportunity to travel at low rates and see other cities was a great temptation, and that now this novelty has worn off and that the desire to travel long distances to conventions no longer exists. It is fair to presume that the bulk of retiring members would remain with the society, had either one of the following conditions held true: First if they had been fully satisfied with its management, second, if they had believed that they were receiving benefits commensurate with the annual dues their membership imposed upon them, or thirdly, had their interests in the society's future been properly kept alive. Perhaps one of the causes has been that the manner of conducting the society's affairs has been such as to cause many to feel that they had no adequate voice in the proceedings, save to pay annual dues and witness the casting of a majority ballot in the election of a Board of Officers selected by a caucus composed of a limited number of members who possessed sufficient knowledge of politics and sufficient self-assertion to successfully manipulate their slate. Possibly such manipulation, which can scarcely be claimed as majority rule, built up prejudices against many members actively engaged in the caucusing, and the impression that the Society's interests were ruled by a clique might have grown into conviction, and many ceased financial support to an organization in which they considered they had no deciding voice as members. Possibly another unfortunate feature might have been the desire on the part of a governing minority to build the S. A. F. into a controlling organization, making all other floral societies subject to its control. Many might have believed that should such an unfortunate movement succeed, it might in the end work no little mischief to the younger societies, crippling their advancement and hampering their usefulness without accomplishing any adequate advancement in floricultural interests in general, and they might have characterized it as an effort to monopolize, control and dictate the future floricultural development of this vast country.

In order to understand what such domination would mean, it will be necessary for us to turn for the time being to the horticultural interests of Great Britain, comparing their number, scope and magnitude as proportionate to the

British population with the ultimate growth of American horticultural interests, in proportion to the enormous population that is soon destined to occupy this continent. According to the best information at my command there exists in England at the present time, some 400 horticultural societies of various classes, distributed among a population not exceeding twenty-seven millions, or an average of one horticultural society to 67,500 inhabitants. The present population of the United States is at least sixty millions, possibly seventy; allowing the same ratio of one horticultural society to 67,500 inhabitants, would give us material for about 900 horticultural societies should the interest in horticulture become as fully developed as in England. It has been asserted that the United States is capable of supporting a population of upwards of two hundred million. When this number is reached, there will be material for about three thousand horticultural societies of the various classes. Considering commercial florists only, we now have in this country not less than 10,000 commercial florist's establishments where plants and flowers are grown and sold, or bought and sold. These establishments should afford an average of three persons to each establishment, who should properly be eligible to membership in some class of Florists' Society, giving us in round numbers 30,000 possible members of the different classes of purely commercial florist societies. With a population of two hundred millions this would be increased to 90,000 eligible members for commercial florist societies alone. Further, we may estimate the number of private places employing skilled horticultural labor at double or treble the number of commercial establishments or from 20,000 to 30,000, thus affording from 20,000 to 30,000 persons available to membership in various classes of gardener's associations. Should we wish to consider the number of persons available to membership in various classes of amateur florist societies, another 30,000 names would at least be added, making a total of at least 90,000 persons now available as members in some class of a florist association, which number would be increased to a half a million or more when the population reached the two hundred million mark. Should we now attempt an estimate of the membership available for all other classes of horticultural societies than florists, the aggregate would be so large as to challenge belief. I am informed that the S. A. F. at one period showed a list of 1147 members in good standing, or about 9% of the total number of eligible florists. Its present membership has fallen to 700, or 7% of the total number of eligible persons. These facts demonstrate the absurdity of any attempt to claim for the Society of American Florists any precedent whereby it should be considered as having established any shadow of right to dictate the nature of American floricultural associations. Purely analyzing its position, the S. A. F. is simply an organization composed of 7% of the number of persons engaged in commercial floriculture, and not less than ten societies of equal or superior membership might be organized outside of its ranks.

These comparisons are not given for the purpose of belittling the importance of the work already accomplished by the S. A. F., nor of casting any reflections upon it. Far from it; the splendid work accomplished by this society will remain its lasting monument, and it will occupy

a permanent place in American floricultural history, as a pioneer to the scores of floral societies that are destined to spring into existence, as powerful factors in the wonderful development of floriculture that lies immediately before us; but these comparisons are made for the purpose of demonstrating to a few misguided enthusiasts the utter futility of attempting to control through the medium of any one organization such vast interests, comprising such an enormous membership scattered over such an enormous territory.

A national society of representative florists may in time be formed by the election of delegates from various floral societies now in existence, and to be hereafter formed, but it may well be questioned if the time is yet ripe for such a step. Such a national society composed of delegates from all societies could fully establish the claim to be a representative body of American florists, and as such could consistently ask for a national charter. Perhaps it might justly be claimed that the number of florist's societies should not be diminished, that on the contrary, they should be increased in every possible direction, that we should not only have carnation, rose and chrysanthemum societies, but that any flower that can command a sufficient number of specialists as devotees to maintain a successful organization should be favored as well. Above all, that private gardeners, amateurs, owners of large private establishments should be encouraged to form themselves into associations for advancement in their several lines and that the existing societies should lend such movements their fullest encouragement and support. It might even be hoped that the time is now past once and for all when the organization of any new florist association, no matter what its class, should be the object of obstruction or question on the part of any society already in existence. Should efforts on the part of societies now organized be continued in this line of questioning or obstructing the further organization of various floricultural associations, it is possible that the majority of florists might arise with the accusation that a well organized trade union of trade florists were endeavoring to control the advancement of floricultural progress on this grand continent, and further it might be possible that should such a belief become firmly seated in the minds of the bone and sinew of the florists of America, it would prove a death warrant to the present societies, causing them finally to pass out of existence and to be supplanted by new organizations formed upon broader lines. Any effort to mold a national trade society upon the lines of certain existing secret societies, may well be questioned, and it might be claimed that such an organization might become a national trade union of florists and might prove as dangerous and disadvantageous to the individual florist as the modern labor union is to the individual workman, and the attempt on the part of a florist society composed of commercial tradesmen to overturn national precedents and by special legislation obtain for themselves a national charter, might be considered by those well informed in the affair of governments, as an attempt to introduce a precedent dangerous in its possible future in order that their special trade organization might reap some undue advantage and the abandonment of such measures might be taken as an indication of a broadening in the ideas of the dominant commercial florists of this country and of the resolve on their part

to allow the development of American floriculture to proceed on natural lines free and unobstructed.

But enough of the errors into which our societies have fallen or may fall into hereafter; this paper would indeed fall short of its mark did it not advance some ideas as to how and in what manner the future welfare of our floral societies may be fostered and insured. It has been claimed and admitted that since the organization of the American Carnation Society the improvement of the carnation has been marked and wonderful and it is also admitted that this improvement and successful growth of the society has been coincident. This fact would seem to solve the secret of the future welfare of all our special societies. Successful, well managed popular annual exhibition of the special flowers, governed by the special societies, such exhibitions to take place when the flowers can be shown developed to their greatest perfection. These exhibitions besides acting as popular educators and improvers of the taste for finer flowers, serve as powerful stimulants to their members to put forth increased efforts in improving their products, and such encouraged efforts compass in a large measure the advancement of floriculture. It has been questioned whether the greatest number of people can be reached in this manner by a national society, moving about to a new locality each year, often selecting that locality which proffers the greatest support in the way of a champagne dinner, or whether more quiet meetings held by local florists so managed as to attract more of the attention of the general public and less of the convivial spirit would produce more substantial results. I shall take the broad stand that every state in the Union should have its florist association; that these associations should hold three or four flower exhibitions each year. To those who exclaim against the burden of such exhibitions, let me say that these need not be on an ultra-extravagant scale. A moderate exhibition of choice flowers tastefully arranged, to which cards of invitation could be issued to that class which it is desired to reach should bring enough of an attendance to render the shows profitable as advertising mediums and should be entered into largely for this reason as well as for the effect upon the public, and that at all such exhibitions, the name and address of the grower should be prominently attached to his exhibit in order that he might receive the fullest measure of benefit from his enterprise and spirit as an exhibitor.

Certificates of merit, medals, honorable mentions and complimentary notices should be the main awards. Classes and medals and certificates should be provided for amateurs as well as for private gardeners. In fact the premium list should be arranged with a view of stimulating the love and knowledge of plants and flowers among as large a class of people as possible and should not be confined to the encouragement of commercial florists alone. From a commercial standpoint, florist societies should not be confined to the rank of tradesmen, but the formation of all classes of florists' societies should be generally encouraged, not only for sentimental but for trade reasons, the greater the interest the stronger the development of the popular taste for flowers and plants, the greater becomes the commercial possibilities of the florist. There is a feature that has been overlooked by many, that is, that every president, every secretary, every officer of a florist society becomes to a great extent

a special worker and more or less of an enthusiast. The greater the number of societies the greater the number and enthusiasm of these officers, whom I would characterize as special workers. I must confess that I have no sympathy with those who would build the florists of America into one vast cumbersome association, the control limited to a few heads, chosen upon the plan now pursued in our national societies. Such an association would prove narrow, cumbersome, slow to move and perhaps ultra-conservative, and eventually would afford too many opportunities for the formation of cliques and rings, the existence of which might prove very detrimental to the individual florist who did not possess influence.

But we must have a national society, says one, and why not build the S. A. F. into a grand head organization, a parent controlling all the others. This proposition leads us to several pertinent questions. Has a society organized by commercial growers and dealers alone, reaching in its palmy days a membership of 1140, but 9 per cent of the commercial florists in this country, and now reduced to a membership of 700, but 7 per cent of the total number of available members, entitled to the distinction of controlling the destinies and future educational prospects of the 9300 commercial florists who are not its members and whom it is at this date impossible to get as members by ordinary means? Is not the S. A. F. as now constituted a trade organization and nothing more? Does it differ in any respect from an association of shoe manufacturers, lumber dealers or dairymen, and can it claim national distinction because its members are engaged in the production and sales of flowers and plants instead of some other useful commodity? Should the future destinies of the national floricultural progress and development be entrusted in the hands of an organization composed wholly of tradesmen? Will such an organization ever be in the position to invoke the aid and co-operation of the wealthy lovers of flowers who have no commercial interest therein, but whose prestige as members would be invaluable? Personally, I believe not. To my mind the future national floricultural association should be a distinctively representative body, compassing all classes of floriculturists, amateurs, private gardeners and commercial growers as well. Its membership should not be large, but its members should be elected from the various local and special florist societies that are now and may be hereafter organized. Every florist society of any class that could command a paid up membership of 50 or 100 members should be entitled to elect a member to the national society and an additional member for every 50 or 100 additional members in good standing. Such an organization might be justly considered as representing American floriculture in its broadest sense. It could ask for a national charter with some show of reason. It would undoubtedly receive endowments from wealthy enthusiastic admirers of the goddess of flowers. It could establish a national headquarters, in short, it could wield, untrammelled by the selfish interests that must ever dominate tradesmen's organizations, an influence that would be permanent and of lasting benefit to American floriculture.

In closing this paper I would consider myself remiss in my duty to my fellow members if I failed with a word of advice as to their future course in treating certain propositions concerning certain proposed alliances with other organizations.

The Carnation Society has independently and alone accomplished much to be proud of. Its present state is eminently satisfactory. Its position is simple and devoid of entangling complications. Keep it so. Do not be drawn into a line of action that may in the end rob our society of its independence. Do not allow clever political moves to influence you in deciding upon a subject the outcome of which cannot be comprehended or the final result of which you cannot in a measure foresee. Go slow in forming partnerships with other associations! Recent experiments in gigantic partnerships among florists have not proven the grand success their promoters have designed them to be. A moderate sized, well-managed successful carnation society entirely free from in-cumbrance or complications with any other body, maintaining by annual exhibitions the popular interest in the divine flower which we represent will be a surer, safer course for us to pursue than any other that can be devised.

Nominations for place of meeting being called for, Harry Sunderbruch took the floor and on behalf of the Cincinnati Florists' Club extended a cordial invitation to meet in Cincinnati in 1897, and with such persuasive eloquence that the invitation was accepted by a unanimous vote.

Mr. Richard Bagg's paper on "Hybridization" was then read by C. H. Allen, as follows:

What are the Effects of Hybridization on the Carnation?

BY RICHARD BAGG, BRIDGETON, N. J.

Hybridizing is hardly the right word to use, in this case we should have said crossing, because with carnations we cross varieties only, and not distinct species, which is hybridizing, but as it conveys the idea better than most any other word, why should we not make use of it?

My first acquaintances among carnations were President DeGraw, Crimson King and a few other more or less noted. These I crossed together with the intention of getting something wonderful, but my first set of seedlings were remarkable for nothing except the high opinion I had of them. A few of them having the largest and most double flowers, were selected and crossed with each other and with named varieties. Then from this set of seedlings again the best were selected and inter-crossed with themselves and named varieties. This plan was followed for several years, without giving any grand results though the average size of the seedling flowers was gradually increased; then semi-occasionally a seedling would break from the regular run and give flowers that were in some points away ahead of the average, not perfect of course but still a distinct move in the line of improvement.

Now, if we only knew what to cross with to develop the improvement what a help it would be, but it takes so many experiments to discover which goes with what to produce a good result that it almost seems to be chance work. There are indications that the foliage and different habits of growth of the carnations will give some hints to guide in making a selection for crossing. Take two carnations with similar foliage and habit of growth and cross them each way, and the results will be nearly the same in both sets of seedlings, in size and color of the flowers and in the general appearance of the plants. With plants of opposite styles of growth the results are more

variable; the flowers in one set of seedlings are apt to be much better or worse than they are in the other. Suppose we select two carnations, one with heavy foliage and bushy compact habit of growth, the other with small leaves and slender habit, like Lizzie McGowan. If we cross the small leaved slender variety with the bushy one the results will be very superior to those produced by the reverse cross. In fact those of a slender habit seem almost useless when used as pollen parents, but often give excellent results when used as seed bearers. Probably there are other little differences that if taken notice of would aid in producing fine flowers. It takes so much time to find out and verify anything of this kind that I think if every one who is engaged in this sort of work would give his experience, both success and failures, no matter how trifling they might seem, it would prove very interesting and useful to all who are growing carnations from seed.

If we are working up a strain of carnations and wish to increase the size of the flower as rapidly as possible it can be done by crossing a flower with its own pollen parent. That is to say, we take two carnations A and B and cross A with B and then select the best seedling from this cross, which for sake of distinction we will call Y. Now, cross Y with B and the seedlings from this last cross will be likely to give us some with flowers perhaps half as large again as either parent. This might not work well if repeated too often; I have not tried it many times but am afraid the stem would get weak, and the plant lose in vigor.

My ideas about color were that any shade desired could be produced in carnations, in a way some what similar to a painter mixing colors; that a red and a white carnation crossed would give shades of pink. White crossed white give white and so on. But white crossed white will sometimes give plenty of white flowers and sometimes nearly all shades of red, even to the darkest crimson. White and red gives mostly shades of red. Red crossed red returns us reds again. The prevailing colors among seedlings are pink and red shades; perhaps these were the usual colors in the original variety. By this I do not intend to say that it is impossible to produce a strain of carnations that would not come true from seed, but it will take time to breed them up to that point. It does sometimes seem as if carnations had notions of their own, and were determined to do as they please. I have always used solid colors except Buttercup and a few seedlings in crossing. Lately I have been favored with an unusual proportion of variegated flowers among the seedlings. It is rather curious they should break out in this way. Buttercup has been putting in some of his fine work, though it is hard to believe so little of him could make so much variegation, yet we can trace him up in most of the cases. One of these variegated oddities of no special merit, except that I was sure, positively sure, there had never been one like it anywhere, attracted the attention of a lady visitor, and she exclaimed, "See that beautiful German flower, we had those at home in Germany." I did not tell her it was a true American by many generations, but I thought about there being nothing new under the sun, while a vague idea flitted through my brain of going to Germany and every other country where carnation are grown to learn the difference between old and new.

In carnations for crossing we want strong stems; this part is very important

and cannot be neglected. It seems to be easier to get large flowers than the stem necessary to carry them. We want also vigorous healthy plants of the free blooming class and in the flower good calyx and long petals. Flowers with petals comparatively short for their width are likely to burst; those with long petals are usually free from this defect; even the shape of the flower bud shows whether they will be apt to burst or not. Those with buds that are larger at the top than the base are all right, if the base of the bud is the largest they are almost sure to burst.

One thing it is well to bear in mind is that "Like produces like" or the likeness of some ancestors. The carnation we are now selecting will some day be an ancestor. Do we want to see it again showing all its best points or perhaps all its worst? It will not be likely to strongly impress the first generation, and perhaps we will wonder why that fine flower did not give better results, but wait till its grand-children and great-grand-children come along and if it is a flower of strong character it will surprise us by coming out unexpected here and there, such an improvement on the original that we have to trace up its genealogy to be able to recognize it.

It is rather remarkable that though the named varieties will seldom stand our winters, the seedlings from them are perfectly hardy and live through our hardest winters without the slightest protection, and when a thousand or more come out in bloom in June they make a show worth looking at. If you wish to try some it is not too late. Seed can be set now, ripened and good plants grown from it that will be large enough to live through next winter without protection and if the stock is good a large proportion will bloom next September. Plants that are set out in May and do not flower before cold weather are never free enough to be worth taking in, no matter how good the flowers maybe. For places farther north where the seasons are shorter this might not hold good. We are a trifle south of Philadelphia, with a soil naturally well drained, which would make considerable difference in wintering, for carnations hate wet feet.

In a field of seedling carnations we find an immense variety of shades and tints, mingled in reckless confusion, while here and there may be a touch of pure color, matchless for its brilliant tone; but what a pity the flowers of such beautiful color almost always prove to be single! This is merely a way they have of tantalizing us. Then there are large ragged flowers that are burst all to pieces, others in better shape and more or less double, all sizes and kinds except just what we want. Again a great difference is found in foliage and habit of growth; some will be tall, some dwarf, some with leaves comparatively broad, others with narrow grass-like foliage. Most of the largest finest plants that we expect will produce something extra in the way of flowers turn out good-for-nothing single ones. Then there are a few that return to the old type of annual bloomers; these make very pretty plants, round rosette-shaped bunches of green, but they never offer to send up a flower stem the first season. Those that bloom the soonest from seed can generally be relied on to be free and perpetual; between these and the annual type we will find many grades of freedom in blooming. All these variations are in our favor; it is an indication that by careful crossing, proper treatment and plenty of patience, the carnation will produce almost any style of flower we want, and

the time is not far distant when we shall have carnations as much superior to those now grown as the Bridesmaid and Perle roses are in advance of the old Bon Silene and Safrano.

The report of the exhibition judges was then presented.

Exhibition Awards.

Awards in class A, vases of fifty blooms, were as follows:

White, F. Weber & Sons, first, and Chas. H. Allen, second with Storm King; light pink, first, Cottage Gardens with Bridesmaid; second, Kent & Miller, Wm. Scott. Scarlet, first, J. I. Suydam, Portia; crimson, Cottage Gardens first, W. R. Shelmire second, both Meteor. Yellow variegated, the same exhibitors with Eldorado. White variegated, Wm. Swayne first; Dailledouze Bros. second, both Helen Keller.

Under class B Dailledouze Bros. took first on McGowan, Tidal Wave and Keller; Weber & Sons first on Alaska, Storm King, Uncle John, Daybreak, Albertini, Cartledge, Meteor, Buttercup, Chester Pride and Harrison; Cottage Gardens first on Bridesmaid and Kitty Clover; J. I. Suydam first on Portia, Bouton d'Or and Scott.

In class C Storm King from Cottage Gardens was first in whites, Bridesmaid from same exhibitor first in pink, and Hector from Weber & Son's first in scarlet.

Altogether the exhibition was considerably smaller than that made last year at Boston, but the flowers were of high quality throughout. On seedlings, Flora Hill, white, from E. G. Hill & Co., was the only variety that exceeded the 85 points required for the award of a certificate of merit. Della Fox from Myers & Samtman, and Jubilee from Hill were both recommended as likely to become standard varieties. Armazindy and Triumph from Hill were both also recommended highly. Ivory from Geo. Hancock & Son scored 70 points, Crimson Sport from J. L. Dillon 65 points and Edith Foster from Peter Fisher was awarded honorable mention. In the class for two-year-old seedlings seven varieties were staged. Mrs. McBurnie from Hill scored 90 points, Kate Schaefer from Hill 75 points and Marion Brown from G. H. Hale 73 points, a certificate being given to Hill's Mrs. McBurnie.

Quite a discussion was caused by the reading of a communication from Secretary Stewart of the S. A. F. inviting the Carnation Society to send a delegate to confer with the executive committee of the S. A. F. at its meeting in Cleveland, and the president was on motion of James Dean authorized to appoint a representative as invited.

The Banquet.

The banquet given by the New York Florists' Club at the Broadway Central Hotel was unquestionably the biggest occasion of the kind on record, nearly 300 of the club members and their guests participated. The grand dining hall was resplendent with flowers and green, columns, walls, ceiling and mirrors were profusely draped with southern smilax and enriched with great masses of carnations and tulips and garlands of bougainvillea. On the tables were baskets and vases of the choicest bloom that the local growers could produce and in unstinted quantity. To give the names of all the contributors would be to enumerate some 40 of the club's leading members. The decorative work was under the direction of Lawrence Hafner and he was ably assisted by A.

Warendorff, Wm. Plumb, J. Suplee, Geo. Hallinan and J. I. Donlan. The entire decoration was a display of floral loveliness, creditable alike to the donors and the artists who arranged it.

The oratorical part of the feast began with a brief word of welcome by President Allen, who then introduced Treasurer Weathered as the toastmaster of the evening, which resulted in an outburst of applause such as few men other than popular Charlie Weathered could hope to receive. The first toast was to the American Carnation Society, to which President Dorner and E. G. Hill responded. Mr. Hill's speech was one of the best he ever made and was applauded to the echo. John N. May responded eloquently to "Our Night," and was followed by Robert Craig, who spoke for American florists in his usual entertaining manner and expressed for his Philadelphia friends their thanks for the grand reception they had met. Robert Kift spoke for the fraternal societies, closing with a call for three cheers and a tiger for the New York Florists' Club, the grandest Florists' Club on earth.

P. O'Mara's response for our absent brothers was a touching tribute to the memory of these members who have died during the past year, and he also alluded feelingly to the deplorable enforced absence of President Scott of the Society of American Florists. Warren Ewell then made one of his inimitable speeches which set his audience fairly wild with laughter and was followed by D. D. L. Farson and several other entertaining talkers. Music was furnished by an orchestra and several songs were sung by local favorites, a pleasing diversion being also furnished in the graceful dancing of a little miss, who came in profusely draped in carnations.

The morning session on Friday opened with nomination of officers for succeeding year. There was but one name presented for each office, namely, president, H. L. Sunderbruch; vice-president, Richard Witterstaetter; secretary, A. M. Herr; treasurer, C. H. Allen.

E. G. Hill then told of his experiments with arsenical solutions for checking rust in carnations. He had found much difficulty in getting arsenic in solution, but had finally discovered in the preparation known as Fowler's solution used in the proportion of one ounce to eight gallons of water a remedy that will absolutely annihilate rust. He asserted positively that by the use of this formula carnation growers can bid adieu to all fears from rust henceforth.

President Dorner here called attention to some abnormal buds of Wm. Scott in which the petals, although full grown, adhered tightly to each other and refused to separate. A letter from Prof. Arthur stated that an examination of the buds failed to disclose the cause of the trouble. Several members however stated that they had encountered the same difficulty and in each case it appeared to be the direct result of over-feeding with nitrate of soda or fertilizers especially rich in nitrogen. The diseased buds came from N. D. Pierce, Jr., who stated that the trouble was not confined to Wm. Scott, but showed to a greater or less degree on many varieties.

Prof. F. C. Stewart then read a paper entitled "Some recent experiments in the treatment of carnation rust," giving results of a great variety of tests under many conditions and with various chemicals. The full detailed report of these experiments will be published by the New York Experiment Station in due time.

Chemical Fertilizers.

BY ELMER D. SMITH, ADRIAN, MICH.

[Read before the American Carnation Society at their New York meeting.]

The advantage of chemical fertilizers over others are the highly concentrated form in which they may be compounded, the ease with which they may be applied and their solubility, thus being powerful and effective with less expenditure for material and labor. They are also clean, free from smell and quick in their action. It is admitted that nitrogen, potash and phosphoric acid are the principle elements which encourage and sustain healthy plant growth. If this be the truth the value of all fertilizers must be considered from the amount contained of these three elements in connection with the cost after they are applied.

To illustrate how varied is the amount of plant food in different manures, let us make a mixture by uniting chemical salts and compare our result with other manures. We will make 100 pounds, using nitrate of potash, phosphate of ammonia and phosphate of potash in equal parts. This will give us nitrogen, 7 pounds; potash, 23 pounds, and phosphoric acid 26 pounds, or a total of 56 pounds of plant food that is available when dissolved. The Encyclopedia Britannica tells us that 40 tons of manure from fattening cattle contains 573 pounds nitrogen, 448 pounds potash and 475 pounds phosphoric acid. Reducing to the quantity per 100 pounds we have nitrogen .72, potash .56 and phosphoric acid .59, total 1.87 pounds or nearly 2 pounds of plant food. In this comparison the ratio is 1 to 28 in favor of the chemicals as far as quantity is concerned.

Very little need be said regarding the comparative cost of application; 2800 pounds of manure must necessitate more expense in application than 100 pounds of soluble chemicals. The analysis of sheep manure varies somewhat from the one given, containing less potash and more phosphoric acid and nitrogen, the latter being greater than both the others, yet there is but little difference in the total. As before stated to estimate the real value of fertilizers we must not consider the bulk we get for our money, but learn how much plant food they will afford. If sheep manure can be delivered for \$25 per ton (allowing it contains 50 pounds of plant food) the real cost of the fertilizing material is 50 cents per pound. It would be foolish and unjust to contend that animal manures do not give as good results as chemicals and very likely better in the hand of the inexperienced. It is very easy to overfeed with such concentrated matter.

What functions do each of these elements perform, or what is their effect upon plant life? Possibly you have asked yourself this question. It is a perplexing one to answer definitely. The Encyclopedia Britannica affords good reading upon this subject, although in some cases rather indefinite. My observations lead me to believe that nitrogen has more to do with the growth than the others. It seems as though potash and phosphoric acid modified the quality. Plants that are in apparently healthy condition and yet rather inactive, making growth slowly, I would recommend an additional amount of nitrogen to the feed. This may be done without increasing either of the other elements by adding nitrate of soda or sulphate of ammonia. Nitrogen is assimilated easier when supplied in the ammonium than in the form of nitrates, hence sulphate of ammonia will give the quickest results. Those who object to the use

of sulphates can use aqua ammonia which is excellent to hasten growth; four ounces of the FFF grade to 40 gallons of water. For sickly plants of any kind I know of nothing that will equal this in restoring vigor. Should the roots be injured from any cause it will be best to begin with a weaker solution and increase gradually as they improve. The advantages gained by the use of potash are less perceptible; it is supposed to assist or take part in the metabolic process and in this constructive and destructive operation the plant continues to gain in solid or weighty parts. Phosphoric acid seems to harden the growth and I believe has much to do with its substance and that of the flower. From these conclusions it will be seen that no one of these elements is sufficient in itself to sustain good healthy growth. The 100 pounds of fertilizer previously prepared was only to illustrate how highly concentrated they could be made, it being too abundant in phosphoric acid and deficient in nitrogen to be practical for general use. A good mixture for all plants should have about the same amount of nitrogen and phosphoric acid, while the potash should predominate over either of the others about 50 per cent:

To obtain the best results from the four most important species to the florist, namely: Carnations, chrysanthemums, roses and violets, I feel certain separate mixtures would be necessary. The carnation, rose and violet are continuous in their growth and flowering, the chrysanthemum and rose need similar materials to construct their hard woody stems, while the violet needs but little for such construction. Thus far I have not experimented with all these species and so am unable to give proofs of the foregoing conclusions, but am quite certain excellent results could be had (provided all other necessary details were closely attended too), by chemicals mixed in the following proportion:

For carnations, nitrogen 10 per cent, potash 25 per cent, phosphoric acid 12 per cent.

For roses, nitrogen 10 per cent, potash 17 per cent, phosphoric acid 17 per cent.

For violets, nitrogen 17 per cent, potash 6 per cent, phosphoric acid 17 per cent.

For chrysanthemums same as for roses until the buds are formed, when the supply of potash should be reduced in favor of nitrogen and phosphoric acid. The food material must not be considered the all-important factor in the production of plants and flowers. There are many other details which when properly looked after assist the plant to assimilate these foods. Fresh air is of great importance, as is the proper temperature and sufficient light and moisture. All of these important factors are dependent on one another, insufficient heat necessitates a less amount of water, insufficient light and air less heat or too spindling will follow. In addition to the three elements mentioned there are others which are found in the ash of most plants in varying quantities. The most important of these is lime, being very abundant in carnations and chrysanthemums. As lime is insoluble, probably the most practical way of applying is by top dressing and working it into the soil. Silica is present in the ash of all plants and is said to give stiffness to wheat straws.

Possibly stiffer stems could be given the carnations if it were applied in available form. We have made some experiments in this direction, but at present are unable to give anything definite upon the result. If there are others who would like to experiment in this line, will state we

used two parts of fuller's earth to one of lime, applying water to the lime in small quantities, repeating every few minutes until the process of slacking is well under way, when the fuller's earth is added, stirring till the whole is a fine whitish powder. This is then applied as top dressing and worked into the soil. The amount of silicate matter in soil varies greatly and possibly this accounts for the difference often noticed in the quality of stems, when grown under the same or very similar conditions. The question arises whether the carnation will assimilate enough to improve this desired characteristic, but this can only be determined by careful tests. There is very little loss of material when chemicals are applied in solution, the greater part being utilized, and herein is the danger of overdoing in our desire to increase in size, quantity and quality. The solution being so available is immediately taken up and if continued too often or too strong ruinous results follow.

When mixtures are used containing a total of 40 per cent or more of food and the application is continued once or twice per week, I would advise using not stronger than one ounce to ten or twelve gallons of water. It may be given stronger than this when occasionally used. Due consideration should be taken as to the present condition of the soil and plants. If the soil is rich with manures a smaller quantity will be needed than when the solution is depended upon wholly, or where old exhausted soil is used. The weaker growing varieties are first to show the effects of excessive food. Our results have been so satisfactory that we have depended upon chemicals alone for the past two years.

While it is not late for putting in cuttings by any means, yet the sooner we can get them into the sand after this date the better will be our chances of success next winter. Those already rooted should be taken out of the sand and potted without delay; nothing can be gained by leaving a rose cutting in the sand a single day after it is ready to pot. On the contrary the roots are liable to get brown and rusty, or too long to be got inside a small pot without the expenditure of altogether too much time. I know it sometimes happens that we have no place ready to receive a batch of rose cuttings ready for potting until the freesia is cut off or the Romans are out of the way, or a certain crop of flowers is all cut off, so as the foliage appears to be all right we leave our cuttings in the sand for two or three weeks, expecting that they will turn out satisfactorily. I believe that here is the origin of a good deal of trouble, which perhaps does not show itself until later; when a rooted plant is kept in a condition where it can do nothing more than exist for two or three weeks it must inevitably become stunted and a fit subject for disease. To have complete success with roses under glass I have found that at no stage of their growth should they have the slightest check (of course I have no reference here to plants which are run

more than one season). In providing a place for our young stock we must not be carried away with the idea that any place is good enough, because the very best is none too good; they require and should have the lightest and airiest bench in the house, and be not too far from the glass. Soil suitable for potting should have been provided in the fall and stored in some dry and convenient place. I would add here that if the soil that has been used the present season for growing our roses has proved unsatisfactory, as judging from the many letters I have received has been the case in many instances it will be very unwise to pot our young stock into the same kind of material again. I know from experience that some soils that will grow good carnations and other plants cannot be made to grow roses under any circumstances.

Potting rose cuttings is an operation which requires a good deal of care and skill, but is often done in a very careless indifferent manner. To stand and watch some men drag rose cuttings out of the sand, squeeze a number of them into a flat or basket, then jerk them out, their roots mostly all broken and mangled, to be ruthlessly stuck into a pot, is enough to make one's hair stand on end. I have witnessed some of this kind of potting by men who were held up by their employers as crack potters, but have also noticed that the man who potted 6,000 a day was a dearer man than he who did his work well and only potted 2,000. Of course the greater the number of plants that a man can handle in a day the more valuable that man is to his employer, provided he does not sacrifice quality to quantity. Some employees have apparently never learned that care and extreme slowness are not necessarily inseparable; at the same time it seems to me that some employers would do well to pay more attention to the quality of the work of their men.

After potting it is well to shade the cuttings from bright sunshine for a few days by spreading sheets of newspapers over them; as soon, however, as the roots reach the sides of the pots they should have the full sunlight; a light sprinkling of the foliage two or three times daily will be beneficial until they take hold of the soil. To keep the foliage perfectly clean they must be syringed with considerable force frequently, but the soil must never get sour and stagnant from over watering. As soon as the pots are well filled with roots the plants should be shifted on into three-inch, and soon until they are planted out.

ROBT. SIMPSON.

Anthracnose—Soil.

L. E. H., living in Indiana, has a house of sick roses and sends specimens for examination. His letter is too long to publish here. The plants he sent must have been in the mails a long time, as both foliage and stems were completely dried up, so much so that it was utterly impossible to come to any conclusion as to the character of the ailment. The roots however appeared to be all right and from the description given it is more than likely that the trouble is anthracnose. L. E. H. says he planted his roses in July in soil which had grown raspberries for ten years. He evidently does not follow the instructions that have been given in this paper so many times as to what soil is best for roses, or he would not have used any such soil as that he describes.

I have found that soil from under, or in close proximity to growing trees will seldom if ever grow good roses. I have not

studied out the reason for it, perhaps the roots give off some substance or matter with which the soil becomes impregnated and in that way spoiled for a time for certain plants, or more likely they take from the soil and carry up into the tree all that is available of certain elements of plant food such as lime, potash, etc. If this is true of large trees it is in all probability true also, to a less extent perhaps, of such plants as raspberries.

L. E. H. says that before the plants were in the benches four months they had received frequent doses of manure water, had been given as a top dressing at various times, cow manure, wood ashes, lime and commercial fertilizer. Frankly I think he has killed his roses with kindness. It is related of Voltaire that walking one day with a friend between two rows of beautiful linden trees, his friend complimented him on their beautiful shape and luxurious growth. "Why," says Voltaire, "they have nothing to do but grow." It seems to me that in our treatment of plants in the greenhouse we are often so very kind that we make it almost impossible for them to grow. If at the time of planting the soil is of good quality and has mixed with it enough manure and other fertilizers it will be well able to carry our plants along for six months without anything in the shape of liquid manure. A mulching of old manure about the 1st of September prevents too frequent drying off and saves a good deal of watering and in my opinion furnishes all the stimulant ordinarily that is required before the first January.

If the flowers are needed badly and the plants are not in too poor condition it is possible they may be pulled through. Would advise leaving off manure water altogether for a time and reducing the night temperature to 58°. The different varieties planted do not go together well, Meteor and Bride should not live in the same house. If the trouble is anthracnose can't do anything better as far as I know than continue with the carbonate of copper and ammonia; if there are any dead tips they will prove good propagators of the disease and should be cut out; clean off all fallen leaves and stir the soil every week.

Better not blame your grower unless you are sure he merits the blame, the same trouble might have happened with the best grower in the country, especially if he had no hand in the preparation of the soil.

ROBT. SIMPSON.

Roses—Area Under One Man's Care.

"Subscriber" wishes to know how many thousand feet of glass devoted to roses can be properly cared for by one man. That will depend a good deal on the kind of man; some men can do about twice as much work as others, and still both of them pass as experienced men. Something also depends on the kind of houses he has charge of, the way they are fitted up with ventilating apparatus, heating, watering facilities, etc. If everything is convenient and the houses are not very small one man can handle nicely from seven to eight thousand feet. If he has to do his own firing I would deduct from this from 10 to 20 per cent. This of course has reference to roses planted out for cut flowers.

ROBT. SIMPSON.

Grubs.

A florist from Sharon, Pa., sends specimens of an insect which he thinks is destroying the roots of his roses and causing the leaves to turn yellow; he has an

idea that bone meal has had something to do with their origin, has tried air-slacked lime and tobacco dust at the root as an exterminator, but they have failed to do the work.

This insect or grub is often found in manure that has been mixed with the soil or used as a top dressing while in a green state, but I hardly think it is responsible for the yellow foliage. I have seen them in quantity in the rose benches very frequently, but never saw them working among the rose roots, or any roots injured in such a way as to throw suspicion upon this little grub. From what I know of it and its surroundings I should suppose it was entirely harmless.

Strong wood ashes or soot will usually put an end to this class of insects in a very short time.

ROBT. SIMPSON.

Eel-Worms.

I wish to correct an error I unintentionally made in my communication, printed in the AMERICAN FLORIST of February 15.

The error is in the article on "Eel-worms." In next to last paragraph, last sentence, it should read thus: "A case of plant *symbiosis* (printed *symbiosis*) in which the consortism is essential for the extraction of free *nitrogen* (not oxygen) from the atmosphere for the nourishment of the plant."

A. J. PENNOCK.

Treatment of Palms.

My kentias, latanias and cocos do not do well. They do not grow and the ends of the leaves are dead. What shall I do for them? I heat with hot water and keep a temperature of about 60° at night and 80° during the day.

F. I. V.

The most frequent cause of the ends of the leaves of palms dying is a lack of sufficient water, though the same trouble will also appear in some instances from defective root action and an overplus of water. The temperature mentioned by our correspondent would answer very well for the species noted, providing the other necessary conditions were present, but temperature alone will not do the work.

The soil for the three species mentioned, namely, kentias, latanias and cocos need not differ materially except that the cocos being the poorest rooter of the trio is benefitted by having a little lighter soil. A good loam to which is added a moderate amount of rather coarse sand and some bone dust, the latter in the proportion of a 6-inch pot full to a wheelbarrow load of soil, ought to answer very well unless the loam is very heavy, and in the latter case it will be improved by the addition of some peat, but not more than one-third in volume of the peat will then be required.

The pots should be drained with some crocks and the plants potted firmly, keeping the base of the plant just on the surface of the soil. Water thoroughly to settle the soil after potting and afterward as often as the soil becomes moderately dry—syringe thoroughly with a good pressure of water every bright day and give a little ventilation as soon as the house runs up to 75° to 80° unless the weather is very cold.

After March 1st some shading will be required, for by that time the sun is quite strong and while either of these palms will stand some direct sunlight, yet the color of the foliage will be better if partially protected.

If the plants are now in a very poor or unsuitable soil it would be the best plan to wash out the roots clean before repotting, then repot carefully as outlined above and keep the plants somewhat closer for a month or six weeks until they begin to root anew. W. H. TAPLIN.

New York.

Heavy vans bearing loads of plants have been a very frequent sight in the fashionable avenues during the past fortnight. Gay society events have been crowding close on one another in these closing days of the midwinter season and every day furnished a long list of these functions from every one of which some florist extracted honey in greater or less degree. Of striking or expensive decorations there have been but few, still the aggregate will be found to have been large in amount and the retail florists, as a rule, express entire satisfaction with the season's record. Valentine's day furnished plenty of work for everybody and the market, already cleaned up close to the supply, was inadequate to the special demand for this day, roses and carnations especially running short. Many fanciful designs were seen, some quite elaborate, but mainly of simple character, the favorite heart or double heart being the most in evidence. A pretty little device adopted by Warendorff was an open-centered heart of violets, about four inches across around which was twined a dainty chain of Roman hyacinth blooms. This was placed on top of each box of cut flowers sent out when the price received was sufficient to warrant the expense.

Mr. L. M. Noe was presented by the employees of the New York Cut Flower Company with a handsome silver-headed cane when retiring from his position as manager. Mr. Noe responded with a brief but appreciative speech of thanks. Jos. Millang has left the employ of the company and is now with his brother Frank at 34th street market and Chas. Millang has resigned his position, to take effect on March 1.

Chas. Thorley and family have gone south for a two week's sojourn.

Philadelphia.

The social season wound up with a grand flourish. Everybody seemed to have their hands full of business and the items of expense caused by telegrams, car fares, etc., hunting up flowers enough to fill orders, was considerable. Retail storekeepers received telegrams from florists out of town to help them out, but with little or no success, as it was all they could do to get their own orders out satisfactorily, stock being so scarce. Considering the extra demand and short supply one might have expected prices to advance a little, but they did not. Christmas is the only season that affects the growers' prices, they jump them up during December, reach the climax at the holidays and then come down by degrees as the season advances irrespective of shortage or demand. Now that Lent has set in there will likely be a drop soon, but nothing has fallen as yet.

The selected teas bring \$10, second choice 6 to 8. Beauties, selected 6 per dozen, fair to good 3 to 5 per dozen. Brunners \$5 per dozen, Laings 2.50 to 3. Carnations, especially Scotts, sell well, \$2 is top price except for a few fancies and a good many go for \$1.50; \$4 is asked for the best valley, while much of it is sold at 2 and 3. Romans go slow at 2 and 3. Daffys are plentiful at 3. Tulips sell slowly at 3 and 4. Violets are in good

demand, \$1 per hundred for the best average grade, with the smaller stock at 50 to 75 cents. The California is now coming in from a number of growers mostly in small lots. Rohrer of Lancaster has the best; he puts 50 in a bunch with plenty of leaves. Violet growers as a rule, that is those who send to this market, do not give enough attention to bunching their flowers. Violets are mostly sold in bunches as they come from the grower, the storekeeper not having time to rearrange them, and for them, and for this reason they should be put up nicely, in bunches of 50 preferably, with a generous border of leaves. Some of the leafy varieties should be grown for this purpose alone as many of the growers do not seem to be able to get leaves enough from the double varieties to border their bunches and keep the flowers up together. This is not a small matter, it is important, try it and see if it will not affect the returns.

The February meeting of the Horticultural Society was held in the hall of the College of Physicians last Tuesday evening. Prof. Bailey not being able to be present Prof. MacFarlane of the University of Pennsylvania gave an interesting account of the Botanical Garden now being laid out and to be made a part of the University grounds.

There was a decided drop in the temperature last Sunday evening, when from 40° above zero in the early afternoon it fell to 2° to 6° below by Monday morning. Although the change was sudden we hear of little damage except that two or three of the stores lost whatever they happened to have in their windows.

Hugh Graham's new store is approaching completion and he hopes to be able to occupy the building early in March.

Robert Craig's new araucaria house is about completed, and will soon be filled with this stock. We believe this is the first house erected in this country to be devoted entirely to growing this plant.

K.

Boston.

The lecture at Horticultural Hall on February 15 by Prof. L. O. Howard of Washington attracted a very large audience. The subject was "Some scale insects." Judging from the number and hideousness of the magnified images thrown upon the screen by the stereopticon there are certainly some of them, and the title of the lecture may be called a very modest one. After a description of the various species and their habits the lecturer treated of the various remedies used to check these pests, and spoke hopefully of the prospects for legislation in various states to prevent their dissemination. The lecture was very interesting, so much so, in fact that two gentlemen forgot to keep their eyes on their overcoats, which were slyly appropriated by thieves who took advantage of the darkening of the hall during the use of the stereopticon. There was a small group of new plants on exhibition from T. D. Hatfield, gardener to Walter Hunnewell, among which were Begonias Paul Bruant and Gloire de Sceaux, Impatiens Sultani compacta and a very showy seedling coleus.

The cut flower business under the incentive of the closing week preceding Lent has been booming. There has been a great shortage of roses especially, the very cold weather lending a hand also to keep the supply down just at the time when the stock was most needed. Formerly the occurrence of such a contrary spell would

have sent prices soaring high, but somehow the disposition to do this seems to have gone out of fashion, and while good stock has gone readily at outside prices yet these prices cannot be called steep or exorbitant. Carnations have remained steady all through. Violets are in fair supply on the average, the only exception being Valentine's Day; when the demand for them was something extraordinary. Bulbous stock remains dull and unappreciated.

Hon. C. W. Hoitt of Nashua was the recipient of a gift last week in the form of a handsome dinner set, presented by his friends among the Boston florists. The judge has just finished a fine new residence.

The estate of the late J. P. Spaulding at Dorchester is being cut up, and a new street will run through the site of the greenhouses. Oswald Ralph, the gardener, will start in the florist business on his own account about April 1.

James Delay & Son have moved into their new store, which is one of the handsomest in the city, at 194 Boylston street.

Visitors in town: Walter Mott, representing H. A. Dreer, Phila.; Paul Berkowitz of H. Bayersdorfer & Co., Phila.; and A. H. Wingett, Lenox, Mass.

Boston sent a goodly delegation over the Fall River Line to the carnation meeting at New York on Wednesday night.

Chicago.

Business kept up very well all the earlier part of this week, though naturally it slackened somewhat after Ash Wednesday. Prices remained the same as last week; the scarcity in roses continued, and as there was a brisk demand for the light color Brides and Bridesmaids of the highest grade stood at \$10, running down from this to \$7 and \$8. The strongest demand was for the light-colored stock, there being a good deal of funeral work. Beauties were in their usual demand. Carnations are becoming very much more plentiful, and the price is declining.

Among bulb stocks Harrisii is rather overplentiful, and sells for \$6 and \$8. Daffodils go slowly in this market, and the same may be said of tulips, except some extra stock, such as the pink La Reine. Valley improves in quality, also freesia, which is now quite plentiful. Violets are much more plentiful, and some days move rather slowly. From now on to Easter business will naturally be quiet, and as soon as the cold wave is past we are likely to see a great increase in the amount of stock sent in, so a marked drop in prices may be confidently expected. It is quite likely we shall see a decided change the coming week.

Mr. T. J. Corbrey returned from California last Friday morning.

Mrs. O. P. Bassett, accompanied by her daughter, Mrs. Washburn, started for New Orleans on Friday, with the intention of making a six weeks' visit.

Toronto.

During last week there were two or three sunny days which helped to increase the supply and improve the quality of stock a little, and during the early part of the week trade was fairly brisk, but the latter part owing to zero temperature fell off considerably—18° below was the lowest recorded here.

The Horticultural Society at an adjourned meeting last Tuesday made for itself a constitution and by-laws, the meeting was breezy (gentle zephyrs only) and there were several close votes, but the majority were on the right side and

VIEWS IN THE STORE OF MESSRS. EDLEFSEN & SCOTT, MILWAUKEE, WIS.

of course your correspondent was amongst the majority.

A horticultural paper for the Dominion of Canada published in Toronto is now one of the possibilities if not of the probabilities of the near future; the gentlemen who are promoting the undertaking are well known horticulturists and I don't see why success should not crown their efforts, although I may say, without wishing in the least to throw cold water on the project, that I think it would have been better to wait a year or so until the two horticultural societies now in existence had been brought to a high state of efficiency; if every energy had been devoted to the latter object this year there would have been foundation to work on. However, perhaps both objects can be accomplished at the same time, there are lots of workers, if you can only get them to do something, and the field is large. Success to the (as yet) unborn babe. E.

Washington.

Trade has been very good the past week, notwithstanding the inclement weather, which has prevailed the past two weeks or more, making flowers very

scarce. With the exception of bulbous stuff everything has been exceptionally scarce. It was out of the question to get good roses. The colored ones were pale and sickly; even the whites gave evidence of the want of sunlight. Carnations were not up to the standard, and scarce at that; violets poor and very scarce. There is a general complaint that the red tulips are not up to the standard this season. It is said this is due to inferior bulbs; some of the growers noticed this when their importations of bulbs were opened and entered a complaint. Carnations have been more plentiful this season than ever (excepting the past two weeks), but yet not sufficient to supply the demand.

Azaleas in pots have sold well this season, especially those selling from \$1.50 to \$4 each. Some of our florists have done well with cyclamens in pans, having from 3 to 5 single bulbs in a pan, which retailed from 75 cents to \$2. There has been a good trade in *Adiantum Farleyense* in pots, especially those in small pots selling from \$1 to \$3. *Farleyense* fronds retail for \$2 per dozen, Beauties for 3 to 10, Brides from 1 to 3, Golden Gate from 1 to 4, La France 1.50 to 5, Bridesmaid

from 1 to 3, Perles 1.50, Meteors 1 to 3, carnations from 50 cents to \$1 for extra fair ones, Romans 50 cents, callas \$2 to \$3, Harrisii 3, violets 1, tulips 50 to 75 cents, jonquils 50 to 75 cents. Asparagus is scarce from 75 cents to \$1. There has been a greater demand for fern pans this season than ever, especially those filled with *adiantum*. But I am told there is no money in them; prices too low. REYNOLDS.

Pittsburg.

The weather this week has been a very great satisfaction to those who believe in the groundhog as a prognosticator, for we have experienced regular winter cold, on Monday the thermometer ranging from 3° to 8° below zero, according to location, and continuing low down nearly all week, but with it all the florists have been kept busy. The amount of business has been very satisfactory, although with the advent of Lent social events will not be so numerous or grand, consequently they are expecting the natural decline in decorative trade during the next few weeks.

A new floral establishment opened for business on Monday at 539 Smithfield street. It will be conducted by Mr. Walter Breitenstein, and devoted to cut flower trade and cut flower decorations, endeavoring to accomplish new effects in decorating without using palms, etc., as much as heretofore. The store room is fitted up without the usual counter; instead several handsome tables are used, and the window has for display handsome vases on table and floor, with flowers very artistically arranged, instead of the usual raised platform enclosed. The electric lights are concealed, so as not to be visible looking into the room, so that there is nothing to detract the customers' attention from the display of plants and flowers. At the rear is the room for office purposes, with necessary conveniences and supplies for all kinds of floral work. Mr. B.'s well-known skill and artistic talents ought to enable him to achieve the success his friends hope he will attain.

Wm. F. Drewes has two new houses about completed. They are 215x20 feet each, and are arranged so as to give him a front on 5th avenue, number 5515 and 17. He is putting in in addition to the old one a new 30-horse-power steam boiler, and will have everything in first-class condition to take care of his increasing trade in cut flowers, decorative and bedding plants. He has four other houses 75x18, which are well filled with good stock. The location is a very desirable one situated in a first-class residence portion of our city, and where he will no doubt build up a large and paying business.

Zieger Brothers at Aspinwall, a suburb of Allegheny City, are also extending their business; the past year they have added five new houses to their place; three of these are 100x20 and two 100x10. This gives them nine houses in all, one devoted to roses, one to carnations, one to palms, one to Harrisii and calla lilies, and the rest are filled with bedding plants. Among these are a very large number of geraniums which will be in prime condition for Memorial Day. They had a very fine decoration at the Monongahela House on Thursday night, the arrangement of which was greatly admired.

The Masonic fraternity seemingly appropriated Thursday night for a festival night. Banquets in Allegheny by two commanderies and one in Braddock by the lodge there and a "swell" reception

by the Duquesne Commandery at Kenwood Lawn, East Liberty. Elaborate decorations were the order of the day, or rather the night. The last two were under charge of Elliott & Ulam, and fully held up the reputation of this firm for fine work.

One of our leading stores in gentlemen's furnishings having been entirely remodeled, the proprietor gave a grand opening on Thursday, which enabled several of the florists to furnish handsome baskets and floral designs for it, they having been ordered by the parties in New York, Boston, etc., from whom he purchases goods; it proved quite an attraction to visitors, as well as a benefit to home florists.

Mr. W. McCrear, with James Dell, is out again after being confined to the house for a while.

Mr. Ed. Thiel, who was injured on the railroad last fall, has left the hospital, and is now at his home in Glenfield, but is not able to stand or walk on crutches even. His friends hope he will recover more rapidly. REGIA.

St. Louis.

The cut flower trade last week was not so brisk, but seeing the rush for flowers at the wholesale houses one would think that every florist in town was busy; everybody cannot be supplied, as flowers of all kinds are very scarce. Good Beauties are not to be had; whether it is no sun or from some other cause, these large roses are not up to the mark. Only a limited supply of roses come in and are bought up at sight at good prices. Beauties still sell at \$5 per dozen for the best; Meteors from \$6 to \$10 per 100, Brides extra good stock \$12.50, Bridesmaid \$10, Perles \$4 to \$6. Some very richly colored Woottons grown by F. J. Fillmore bring \$10. All good roses are in excellent demand and bring good prices. Same can be said of carnations, fancy varieties bring \$2 to \$3, fine Daybreaks and Scotts sell on sight. Valley is in fine form just now and goes at \$4. Romans are firmer than they were and plenty of them just now at \$2 to \$4. Dutch hyacinths are worth \$5 to \$8. Daffodils single and double, are very slow, selling for \$2 to \$4. Tulips that come in are good but are selling slow at \$2 to \$4. Callas still sell well at \$10. Harrisii are plentiful now, but still hold at \$12.50. Southern violets have made their appearance and are good and large; they sell for 10 cents per 100. Home grown sell at 25 cents; smilax is selling well just now but not scarce.

St. Valentine's day was exceptionally good with all the florists all along the line, commission men say the same. A few warm bright days of sunshine brought in a few florists to the market with plants, mostly azaleas, cinerarias, hyacinths and cyclamens which sold out in short order.

The decorations at the Cycle Show this week at the Grand Music Hall Exposition Building was by the Schureman Floral Co and plants by Sanders & Beneke, the decorations were elaborate.

The meeting of the Florist's Club Thursday afternoon was the most largely attended meeting in years; the exhibition of new carnations brought out every florist who could spare the time to attend. The following firms were exhibitors; Meyers & Samtman of Chestnut Hill, Pa., sent Della Fox and Annie H. Lonsdale, E. G. Hill of Richmond, Ind., showed Triumph, a very fine pink, Armazindy and Jubilee. Fred Dorner & Son, Lafayette, Ind., had on exhibition Mrs. G. M. Bradt, Dazzle, Storm King, Bridesmaid and Goldfinch. George Hancock & Son,

Grand Haven, Mich., sent Ivory, a fine white and two new seedlings, one a large red, the other a light pink; they were numbered, the red 19 and the pink 42. The St. Clair Floral Co., Belleville, Ills., showed Uncle John, Wm. Scott, Daybreak, Albertini, Portia and Stuart. E. J. Cloud, Avondale, Pa., sent the new Trilby and Uncle John. Henry Aue of Lindenwood showed some good Daybreaks. F. J. Fillmore sent a large bunch of fine mixed carnations that were well grown. Della Fox, Ivory, Annie H. Lonsdale, Jubilee, Triumph, Mrs. G. M. Bradt, Dazzle, Bridesmaid, Trilby and Stuart were the center of attraction. A committee of three, consisting of E. W. Guy, Fred Ude, Jr., and C. A. Kuehn were appointed by the president to make a report on the carnations exhibited.

The report was as follows: The best reds, Dazzle and Jubilee; the best pink Della Fox and Triumph, in white Ivory and Annie H. Lonsdale; the best variegated Mrs. G. M. Bradt and Armazindy. After this the club proceeded with the regular business. The applications for membership were as follow: Chas. G. Fleckenstein and Al Bauer, commission men, Gus Ude, grower, and Robert Ayers, retailer. The exhibition committee made their reports and the preliminary list is now in the hands of the printer. The club extended its sympathy to Mr. Wm. Pape at the death of his son last week.

A motion was made to auction off the blooms sent to the club. Mr. John W. Kunz acted as auctioneer and they all brought good prices; after this the club adjourned until Thursday March 12, at 3 p. m.

J. M. Jordan leaves Monday night for New Mexico, to be gone twenty days.

Arnold Ringier for W. W. Barnard & Co., Chicago, blew in town this morning with the Salvation Army. I learn from Mr. R. that he will join that order. He is here to sell bulbs. I assured him that no florist in St. Louis had a dog that would show his teeth and growl when he says "bulbs."

Max Herzog is once more ready for business. Mr. Chas. Wende rebuilt his houses; he also has plans for a 6-room residence with a glass walk to the greenhouses. Mr. Herzog wishes to thank all the florists through the FLORIST who sent him plants to restock his houses.

The North Floral Co. is cutting the best carnations just now, and in large numbers.

At the Bowling Club Monday three games were rolled; for the first game Weber and Beneke were captains and Beneke's side won; the second game had the same captains and Beneke's side won again; the third game Weber and Kuehn were the captains and Kuehn's side won. The largest three games rolled were by J. J. Beneke, 634; F. C. Weber second with 503, and C. C. Sanders third with 501. The highest single score made by J. J. Beneke, 238; second, F. C. Weber, 206; third, C. A. Kuehn, 192. Mr. Chas. G. Fleckenstein has become a member and will roll at the next meeting. J. J. B.

Cleveland.

Owing to President Scott's unfortunate accident and through that the unavoidable necessity of postponing the executive committee meeting in Cleveland on Feb. 25, the arrangements for their entertainment have necessarily been called off for the time being. Mr. Scott has our sympathy and it is hoped that he will soon be in shape to pay us the contemplated visit, together with the balance of the committee.

Up to the 16th the weather maintained its customary mildness, but on that Sunday night the mercury slid down with a silent celerity that came near catching some of the growers napping. Monday morning found the temperature down to seven below zero, much the coldest weather this winter has yet brought us. As it is, at the time of writing there are some vague rumors concerning damage by frost, but it has so far been impossible to find any considerable foundation for the reports.

Business jogs along as usual, with nothing in particular to record. Prices retain the level that they dropped to shortly after the holidays. Pretty much everything that is good sells, but nobody is getting very rich at going rates. Maybe the advent of Lent will develop a glut to knock the bottom out of things in the old sweet way.

Mr. Boddington, representing Pitcher & Manda, and Mr. Reukauf of Bayersdorfer & Co. are in town. A.

San Francisco.

Business of late has been very good, in fact there is a decided scarcity of good roses. This is particularly true of Beauties. Brides and Bridesmaids are also scarce, and are selling at a good figure. The general bulk of Testouts here at present are rather short-stemmed, but as it is now anything in the way of a rose can easily be disposed of. The great rush of violets is past also, and everybody is glad. Californias are getting quite scarce now and the quality is not near so good as several weeks ago. There has been quite a run on Swanley White lately.

Lily of the valley is in good supply just now and sell very well. The quality has improved somewhat over that of a few weeks ago. Lilium Harrisii is not coming in very rapidly as yet, the growers preferring to hold their stock back as much as possible for Easter. They bring \$2.50 per dozen. Nearly all kinds of bulb stock are in over supply, especially tulips, hyacinths and narcissus. Smilax is a very scarce article here now and there is scarcely any to be had at \$1 per dozen, the strings being generally short and thick. Ferns also are scarce.

The Santa Rosa Rose Association is the name of a new society formed at Santa Rosa. They are out with a program of a roseshow and carnival to be held April 30 to May 3. As this is to be the initial show of this society it is to be hoped that it will be a success.

Among the wholesale men we find that there is quite a lot of outside shipping to Portland, Tacoma and other adjacent cities at present, the prices realized being fairly good. This is the season of the year that these places always turn to California for their supply. METEOR.

Rochester, N. Y.

A brisk demand in the cut flower line with only a limited supply causes much inconvenience to the retailers, all flowers with the possible exception of tulips and hyacinths are scarce and have been so for the past two weeks, even violets, which always have been rather plenty in this market, are coming in very slow and in small quantities at present. Carnations, especially the light pinks, can only be supplied in limited numbers, and as to orders for roses, many a would-be customer had to go without them or take bulbous stuff instead. Most likely this scarcity will not continue very much longer, for there is every prospect of plentiful crops of both carnations and

CONSERVATORIES AT LENOX, MASS

roses coming in shortly at a number of local places.

The carnations at Greensmith's are remarkably vigorous and healthy, and just beginning to flower profusely. His houses are new, but the heating apparatus has not been working satisfactory all winter, although frequent alterations have been made in the piping, etc., consequently the houses could not be kept much above the freezing point in severe weather, and Mr. G. was unable to cut a great many blooms from his plants, but now, everything being in good working order the buds are forming very fast and are of great vigor and strength.

At Salmon's also both carnations and roses were off crop lately, but are now growing and producing buds in fine shape; his violets also look very promising. Several of our growers are picking violets in large quantities, but these are not enough to supply the demand for this favorite flower.

There are two places here where they claim to have a pure whitesport from the carnation Daybreak identical in growth and shape of flower with the parent plant. If this sport proves to be constant and really has the same constitution as the Daybreak, it will be a great acquisition, for although in some localities this carnation does not grow as well as others, most growers are very successful with it and doubtless would be so with its sport.

F. J. Keller left for New York last Thursday on a business trip and will remain away for a week or ten days.

J. B. K.

Conservatories at Lenox, Mass.

Our illustration represents a range of iron frame greenhouses recently erected at Lenox, Mass., for Mr. Anson Phelps Stokes. The length of the front range is 150 feet. The houses are 24 feet wide, and the height to the dome of the central palm house is 28 feet. In the rear are vineries, peach and propagating houses.

The demand in this country for such structures and the facilities for their erec-

tion from American manufactured material is a development of recent years, and it is gratifying to recognize that our greenhouse builders have been able to meet the requirements of modern taste by the production of such fine houses as are here shown. The builders, Messrs. Thos. W. Weathered's Sons, state that in the conservatory just completed for Mr. H. H. Cook, out of 184 boxes of 16x24 American glass used there were but two boxes of breakage and culls, which is certainly a most creditable showing for the American greenhouse glass industry.

Worcester, Mass.

With plenty of good flowers on hand trade runs along fairly steady though prices are a little easier. The supply of roses, carnations and violets is about equal to the demand with the exception of good white carnations (if we were to put an "ad" in the *FLORIST* it would read: Wanted, a good white carnation).

Bulbous stuff is very plentiful and very fair, though as yet we have had no good tulips; Harrisii are selling well and we have enough to supply the demand; valley is in good demand and excellent quality.

The schedule for the chrysanthemum exhibition is in the hands of the printer and the committee will continue to make every effort to hold a successful show. President Hadwen is enthusiastic and is doing much to encourage those having charge of the affair and if the amateurs and growers will only respond to the liberal premium list and grow some good stuff, there will be no such word as fail.

Of the new carnations tried in this vicinity this season Bridesmaid is the best, and it looks as if this carnation has a future before it; as grown here by Lange it is a very fine flower, grand color and habit and as clean as a whistle. Rose Queen is a strong grower and has shown no disposition to rust, is fairly free and the color is good, but it bursts badly; we will give it another trial. Storm King, grown in a house with McGowan, temperature 60°, has made a very poor showing, and under this treatment is

worthless, what it will do with us under cooler treatment next year will tell. Bride of Earls Court is very rusty, but throws some magnificent flowers, stem rather weak and fully one-half of blooms come with a broken calyx; it is very prolific. Meteor comes fine color and habit and is free from rust, but rather too single and has a tendency to go to sleep rather too soon.

Prof. Geo. E. Stone of Amherst Agricultural College read an essay on "Parisite Fungi" at the winter meeting of W. C. H. S. January 30.

W. B. Warner has started into retail business at 301 Main street. A. H. L.

San Jose, Cal.

Trade in this place has been very active for the last month, and everything is bringing good prices, with the exception of violets. Roses are in over-supply just now, and prices have weakened considerably. Bridesmaid and Brides bring 50 cents a dozen, while Beauties cannot be had at any price. Pansies sell very rapidly at 30 cents a dozen. Bulbous stock moves slowly. There is no Harrisii to speak of to be seen now, although quite a lot were here several weeks ago.

At Mr. E. W. Parsons' place everything is looking well, particularly the roses. His Bridesmaids are very fine indeed, also the Brides. They do not get many Beauties. Mr. Parsons is a great admirer of Mrs. Pierpont Morgan, and intends to plant it quite extensively this summer.

In carnations they have several surprises in store; one in particular is a new striped seedling after the style of Helen Keller, but said to be a great improvement on that kind. Mr. Parsons has named this new variety Carnival. Several blooms of it have been sent to the east, and Mr. Parsons expects to hear very favorably of them. This place is now under the management of Mr. Sneike Parker, who succeeded Wm. Nesbitt.

A visit to Emile Bourguignon's place showed his roses, particularly Bridesmaid, to be in fine shape. Mr. Bour-

guignon also grows several houses of cucumbers, which he finds to be a paying crop. METEOR.

Cincinnati, O.

A special meeting of the Cincinnati Florists' Society was held on February 15 and called to order by President Gillett. The object of the meeting was to extend an invitation to the American Carnation Society to meet here in 1897. The meeting was well attended, and the boys were all in favor of having the society come to the Queen City next year.

Business the past week has been very good. Roses and carnations hold their own, and sell at good prices. I am sorry to report the illness of Mr. Rich. Witterstaetter; he is still confined to his room; the boys wish him a speedy recovery.

K. Wolf, one of Cumminsville's popular florists, was married two weeks ago to a charming young lady of that place; quite a surprise to his friends; accept our best wishes. H. SCHWARZ.

Lexington, Ky.

Mr. J. A. Keller intends to add one more carnation house to his plant. This house will cover 20x100 and will run east and west with the short span to the south.

Mr. Keller grows many excellent carnations and has good success with novelties, such as Rose Queen, Uncle John, etc. As a white carnation Uncle John seems to be his especial favorite; it is certainly an excellent carnation as grown here.

J. D. Yarrington has built three 14x60 houses, adapted for miscellaneous stock. Business is quite brisk all along the line. HOMO.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—In greenhouse; steady worker; state wages. Address ROBERT MAIN, 64 North St., Gloversville, N. Y.

SITUATION WANTED—As working foreman; 10 years' experience in all branches, steady and reliable, married. RELIABLE, care Am. Florist.

SITUATION WANTED—In a commercial place, by a young man of 3½ years' experience. State wages with board. F. G. BEHLING, Y. M. C. A., Scranton, Pa.

SITUATION WANTED—As florist and gardener by a married man of small family; good habits; private place preferred; good references. F. B. care American Florist.

SITUATION WANTED—As manager or foreman; a practical grower of cut flowers and decorative plants; references. Address MANAGER, 1019 Vine St., Philadelphia.

SITUATION WANTED—As grower of roses, carnations, violets, palms, ferns, forcing all kinds of florists' stock; States preferred. Address GEO. NORTON, Box 359, Brockville, Ont., Canada.

SITUATION WANTED—By a first-class florist as foreman; excellent rose and cut flower grower; good propagator and general plantsman, single, age 27; best of references; West preferred. Please address GROWER, care Am. Florist.

SITUATION WANTED—By a young man skilled in growing general greenhouse stock, sober and industrious; 8 years' experience; permanent place preferable to high wages; east preferred. Address WESTERN, care American Florist.

SITUATION WANTED—By young man, age 30, single; thoroughly experienced in the growing of roses, carnations, chrysanthemums and general greenhouse stock. Good designer and decorator. References. Please state wages. Address J. COOK, 4920 Drexel Boulevard, Chicago.

SITUATION WANTED—By practical florist and gardener, 10 years' experience in greenhouse and landscape gardening reliable and steady; Swiss, age 33; best of references; competent to take charge of private place. Address ALFRED WAGELIN, Morgan Park, Chicago.

SITUATION WANTED—By well educated, energetic German florist; 18 years' experience; good manager; first-class breeder, designer and all round grower. Have been employed at some of the best establishments of Germany, France and Switzerland; in this country 6 years; in present place 4 years. First-class references. Address R. W. care American Florist.

PROFITABLE SWEET PEAS.

FROM careful personal inspection of all the new and old varieties in the famous pea growing districts in California, and from actual selling qualities shown in the San Francisco Flower Market—the largest in the world for this flower—we find the following seven kinds, for size, stems, prolific habits and other most desirable qualities unequalled. They comprise the leading salable clear colors which are always appreciated. Fill seven vases each with 100 sprays of these, and set them in a row in your window, and you need fear no competition in your trade on this flower.

BLUSHING BEAUTY, clear Daybreak pink.
HER MAJESTY, pure solid rose.
FIREFLY, bright fiery scarlet.
EMILY HENDERSON, best florists' white.
COUNTRESS OF RADNOR, soft lavender.
MRS. ECKFORD, largest good yellow.
BLANCHE FERRY, early pink and white.

PRICES.

1 ounce each, 7 ounces, postpaid, 35 cts.

Address THE AMERICAN FLORIST CO., Chicago.

Duplication of Varietal Names.

In the excellent address delivered by President Dornier before the American Carnation Society at New York there is one subject touched upon to which we must take exception—the duplication of varietal names. In his reference to the carnation list published by the society Mr. Dornier recommends the separation of the list under different headings, which would certainly be very useful as giving an idea of the relative value of the varieties. But the suggestion that an attractive name, which has been already used by some variety generally discarded may be bestowed on a new variety, on the ground that the original is no longer in cultivation, can only result in confusion worse confounded.

To begin with, we can never be absolutely sure that any variety, worthless or otherwise, is entirely out of existence. It may not be quoted in the market or in catalogues, but there is always the possibility that it is grown in some out of the way place. If the purchaser who pays for plants of the new and excellent variety should receive in place of it the old and worthless variety bearing the same name (and having the prior right to it) he would have no redress, even should he lose the value of a winter's crop thereby. Similarity of color would not only cause confusion, but would also cast doubt on the good faith of the introducer, while a striking dissimilarity would give the same results as we already see in our chrysanthemum lists, where these annoying duplications occur.

The AMERICAN FLORIST holds that a name once on record should never be given to any other than the original variety, whether rose, chrysanthemum or carnation. Whether actually disseminated or not, publication identifies the name with that one variety. Our present list of carnations is happily free from duplicate names and it is to be hoped that introducers warned by the number of duplicate and too-much-alike names among roses and chrysanthemums will endeavor to steer clear of the same error.

We learn that the accident to President Scott took place while descending some outside steps near his greenhouses. He slipped on the ice and fell, breaking the larger bone of lower left leg, about six inches above the ankle. It is decided that the meeting of the Executive Committee of the S. A. F., the date for which is near at hand, shall be postponed until Mr. Scott has recovered sufficiently to be able to attend. At last report he was doing fully as well as could be expected. As Mr. Scott is of vigorous physique and in the prime of life it is fair to believe he will make as rapid progress as could anyone suffering such a fracture.

The boxes as they appear when set up for use.

We make them in a sufficient number of sizes, including for violets, to meet all necessary requirements.

The Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

S. E. BRIGGS, Pres.; T. W. WOOD, 1st Vice-Pres.; ALEX. RODGERS, 2nd Vice-Pres.; A. L. DON, 114 Chambers St., New York, Sec'y and Treas. The fourteenth annual meeting will be held at Niagara Falls, N. Y., June 9 to 11, 1896.

THE FIRM of Brotherton, Breitmeyer & Co., Detroit, will go out of business soon. Messrs. Jerome B. Rice & Co., Cambridge, N. Y., have purchased the fixtures and will assume the lease of the Detroit warehouse formerly occupied by the above firm to be used as a branch of their seed growing business.

BOTH HOUSES of Congress are reported to have passed an act making it mandatory on the secretary of the Department of Agriculture to purchase and distribute seeds, and increasing the appropriation from \$130,000 to \$150,000 for the year 1896. The former law requiring seeds to be rare or uncommon has at the same time been repealed. The question of buying seeds out of the 1895 appropriation is still in abeyance.

Syracuse, N. Y.

Trade here continues very good; carnations are still most in demand. Roses are scarce and high owing to the long continued dull weather, society events are very frequent just now, as Lent is fast approaching. The grandest event this winter was the ball given by the Knights Templars at the Alhambra on the 27th ult. No expense was spared either in decorations or other matters, and it was a great success in every way. Nothing has been seen like it before, the whole ceiling was covered with colored bunting, the white and black of the order being freely used, with flags, shields, etc. From the center depended a Maltese cross 12 feet square, which was a neat finish to the upper decorations. The stand for the band on one side and that for the orchestra on the other were very tastefully banked with palms, ferns, etc. Smilax and vinca were freely used in festooning; these were furnished by H. Burt, and Mr. Bill deserves great credit for the artistic arrangement. The large stage was turned into a magnificent banquet hall and to hide this from the ball room a Norman castle was built the entire width. The central towers were 12 feet high, the battlements 9½, the end towers 10½. Over the door a large Knights Templar's shield was hung, made entirely of white and red carnations.

Round the door three rows of cape flowers were placed, these flowers were also used for the loop holes. The framework was covered with green cloth on which hardy ferns were pinned, covering the cloth entirely. It required just 5,000 to do the work. English ivy was trained up the towers. From the stage to the floor a bank covered with ground pine and ferns was made, the latter having the appearance of growing there. The public press and the 1,500 people present pronounced it one of the most artistic pieces of decorative work ever seen in Central New York. The whole was the idea and creation of H. Yonell, who wanted to break away from the stereotyped "bank of palms," and there is no doubt that hardy ferns will be more largely used in the future for similar purposes.

There is every prospect that the premium list of the floral department of the State Fair will be largely increased and value of prizes made much larger, which will insure a larger exhibit from out of town florists. The delegates from the Central New York Horticultural Society attended the annual meeting of the State Society at Albany and laid the matter before them and were assured that the request would be acceded to.

The very interesting articles in the FLORIST "Through American Eyes" are so instructive that at the last meeting of our society, which is composed largely of gardeners (who cannot see your paper), I mentioned Mr. Peter Kay's graperies to them. The question was immediately asked "can't you bring it to our next meeting and read it to us?"—which I have consented to do and feel sure that I shall have an interested audience. This I think might be followed in other societies with good results.

The members of the Central New York Horticultural Society are showing more activity than ever before. It is hoped to increase the membership to 500 before summer; arrangements are being made for the giving of free lectures on plants, flowers and fruits, which will interest all lovers of plant life; a question box will be one of the features of interest, to many amateurs. The premium list for the fall chrysanthemum show will soon be discussed. Messrs. Menelly & Son have signified their intention of offering premiums amounting to \$20 for specimen plant and cut blooms of their new seedling chrysanthemum Mrs. Adelaide White. I should be glad to hear from others with a like offer.

Mr. D. Campbell, superintendent for Major Alex H. Davis, at the last meeting showed some magnificent blooms of cinerarias, many of them measuring 3 inches in diameter, and the markings were perfect. H. Y.

Galt, Ont.

The members of the Horticultural Society entertained their late president, I. M. Duff, now of the Bank of Commerce, Guelph, at an oyster supper recently. It was a fine spread, and great praise is due to John Wells for the table decorations, which he supplied free; also bouquets of roses and carnations to each guest. The principal speeches were from ex-President Duff, President A. B. Thom, H. S. Howell, Rev. John Ridley, Dr. Cameron and Dr. Wardlaw. Each one seemed to excel the other, Mr. Howell's speech being specially appreciated. After singing "God save the Queen" the happiest meeting ever held by the society was reluctantly brought to a close.

John Wells has a fine carnation, sport from J. J. Harrison, an excellent bright pink flaked darker; it is a strong grower and large bloom. I believe Dunlop of Toronto has a new rose, and with McGeorge's new tea rose Canada makes a good showing in novelties this season.

If You Garden for Profit

you can save money and should buy at Wholesale Prices, as quoted in BURPEE'S BLUE LIST for 1896. It is mailed FREE to Market Gardeners everywhere, who, while entitled to the lowest prices possible, should be sure always to get Only the Best Seeds that Grow! BURPEE'S SEEDS are WARRANTED, —few equal, none better—and are sold annually direct to many more planters than are the seeds of any other growers.

☞ If you have not yet seen BURPEE'S FARM ANNUAL for 1896, write for it TO-DAY. A handsome New BOOK of 184 pages, it is pronounced by papers everywhere The Leading American Seed Catalogue.

W. ATLEE BURPEE & CO., Seed Growers, Philadelphia, Pa.

Mention American Florist.

ESTIMATES BY LETTER.

It often happens that upon large orders (whether from market gardeners, canning establishments, or institutions) we can do better than prices quoted in our catalogue.

When sending for such an estimate, please write each variety on a separate line. We will then return this sheet (or order blank) with our lowest cash price for the lot.

At all times we are prepared to meet any legitimate competition with other first-class seed houses.

Des Moines, Ia.

There has been but little sunshine lately and the cut of roses and carnations has not been up to demand. Bulbous stock is more plentiful yet none finds its way to the waste barrel.

We took a trip around some of our local places last week and found P. Lambert making preparations for a large stock of bedding plants, besides growing roses and other flowers. His favorite roses are Kaiserin and Testout. He has four houses using steam heat.

At J. F. Marshall's place we are put upon our good behavior at once, for his place is as clean as a new pin. He has four houses 110 feet long, heated with steam in midwinter, changing to hot water for fall and spring. His business is more wholesale than retail. In roses he has Meteor, Perle and La France as main kinds and in La France J. F. is A1. In carnations he has McGowan, Daybreak, Portia and Tidal Wave. He is practically going out of the bedding plant business and will devote his attention to raising flowers for the trade.

We found J. Ledig with hose in hand and he understands how to use it. He has three houses 100 feet long, heated with hot water. In roses we found Perles, Brides, Bridesmaids and Kaiserins. He grows but little bedding stock. His carnations are McGowan, Daybreak and Emily Pierson. He says Daybreak sells better than Scott in this locality.

We next walked in to Mr. Balthis' house. He has but one house 100x18 feet and it is devoted to carnations—McGowan, Daybreak, Scott, Portia and Tidal Wave. His McGowans had the rust when housed, but through careful work and good management of Chris Anderson, his grower, they are overcoming it.

J. T. D. F.

Clifton, N. J.

S. C. Nash has had a severe and unusual experience with his Beauties this season. Until the middle of September they looked very fine and the cut was good in quantity and also in quality; then the plants were attacked with "black spot" in a very bad form. The plants recovered from that for the most part, but they seem to go all to leaves and small buds on short stems. Out of ten houses of this rose only one is doing well. Mr. Nash has gained such a reputation for his fine Beauties that he feels quite discouraged. He says the treatment has been just the same as he has always used, and he cannot account for the failure in any way.

Mr. Nash is preparing for his aquatic garden and will in a few days start the Victoria regia seeds, and he has a quantity of them. He winters the aquatic plants that are not hardy in a house built for that purpose in a temperature of about 60°.

S. M. T.

THE WM. H. MOON CO.

MORRISVILLE, Bucks Co., PA.

Offer the following to the Trade:

DAHLIAS—20,000 finest and best.

Adiantum Guneatum,

in 2 and 3 inch pots.

Address **FITZ SIMMONS,** Lansing, Mich.
Mention American Florist.

Memphis, Tenn.

The Tennessee Floral Co. is no more; the houses will be torn down in the spring and the heating apparatus has been sold to the Memphis Floral Co., Max Keuhne, the lessee, having departed leaving his landlord and the coal men to mourn his loss.

The Magnolia Floral Co. is the title of a new firm, who during the past year have erected three new houses. They are cutting a fine crop of lettuce at present. They intend entering the plant and cut flower trade. Mr. Albert Haisch, of the late firm of Uhlmann & Haisch, is the moving spirit in the enterprise.

Mr. J. T. Williamson is just recovering from a severe attack of pneumonia.

Mr. James Stewart, our pioneer nurseryman, in connection with his many duties as editor of the agricultural column of the *Commercial Appeal* was called upon as a witness to prove the age of a tree. A section of the tree was brought into the court room, and by the rings it showed the age was to be determined. It was developed in Mr. Stewart's testimony that some trees make more than one ring a year, a case being cited of a yellow pine which Mr. Stewart planted and cut down 25 years later, which showed 75 distinct rings.

Mr. Frank Solly, late of Chicago, has resigned his position with J. T. Williamson. It is understood he will return to Chicago.

Mr. Geo. A. Solly, superintendent of Elmwood Cemetery last season, did the first carpet bedding seen in this section, but it is understood there will be no more of it, as the directors think it is a waste of money.

Trade is very slack since Christmas. The weather has been cloudy, with much rain, and mud and slush makes life miserable in the suburbs, while in the city the streets are liquid mud. H.

Austin, Texas.

A. M. Ramsey, for thirty-five years a successful nurseryman of Burnet county, died at his home in Austin December 30, aged over 70 years. The nursery will be continued by his son, F. T. Ramsey, who has been associated with him all his life, and who has been managing all departments for several years. Trade in all lines has been better than for several years, especially in fruit trees. Austin is getting ready for a solid boom. The great granite dam 60 feet high across the Colorado River is bound to make the city grow. The water rate through meter for irrigating is 5 cents per 1000 gallons, and electric lights are as cheap as kerosene. X. X.

CARNATIONS.

HERR'S CARNATIONS.

ROOTED CUTTINGS that will give good results, because they are taken from healthy stock, and will be well rooted when sent out.

VARIETIES—McGowan, Mrs. Fisher, and Alaska, the best of all whites.

Daybreak, Scott, Aurora, Sweetbrier, Rose Queen, Peachblow, Dorner, Stuart, Portia, Jubilee, Buttercup, Eldorado, Kitty Clover, Keller, Iago, and Meteor, the best of all dark ones. Thomas Cartledge and Wave; also all the Novelties, including Annie Lonsdale and the hit of the season DELLA FOX.

Don't place your order before writing to me. I have fourteen large houses full of Carnations and think we can make a deal. In asking for prices please state how many you will want of each variety and when they are to be delivered.

L. B. 496.

ALBERT M. HERR, LANCASTER, PA.

Mention American Florist.

Crimson Sport Carnation.

This new carnation originated with us six years ago and has been thoroughly tried before offering it to the trade. Crimson Sport, as its name will imply, is a sport from Unique, which was a sport from Lydia. Crimson Sport has the strong, healthy growth of its parent, very large crimson flowers, free from rust and disease, very prolific, long stiff stems, perfectly healthy growth, a good shipper, a good keeper and all in all the best crimson carnation now in cultivation. We say this after growing it several years and comparing it with all the recent introductions and old varieties.

Having plenty of stock our cuttings will be taken from perfectly healthy plants that have not been forced or propagated to death, as is often the case.

Call and see it growing or send for carnation circular of this and other varieties.

ROOTED CUTTINGS, \$1.50 per dozen; \$10.00 per 100; \$60.00 per 1000.

J. L. DILLON, Bloomsburg, Pa.

ALWAYS mention the AMERICAN FLORIST when writing to advertisers.

Springfield, Mass.

There is a scheme on foot to unite the Amateur Horticultural Society of this city to the Hampden County Horticultural Society. It has been thought of for some time and the affair seems to be coming to a head. If a union results there will be an exceedingly strong Horticultural Society with a large working force.

The Hampden County Horticultural Society is busy planning for the exhibitions of the year. The scheme for the sweet pea show is already shaping itself. Advanced premium lists are out. But the exhibition of chrysanthemums is to be the feature of the year and of the years also, for they hope to make it an international exhibition, the idea being to have every state, territory and the provinces represented by cut blooms, premiums being offered for the best 25 blooms from every state.

There has been an excess of balls in the city within two weeks, two of which were decorated by local florists.

The decorations of the charity ball, in the hands of Mr. Gale, were beautiful and elaborate. Everything was in green and white. The cloth work, white, served as a background over which were hung festoons of southern smilax, the sides of the galleries being made to simulate boxes; the cloth and smilax were carried down to the floor. The effect, looking either down or upon the decorations, was graceful, artistic and most beautiful. The stage was finely grouped with palms, double rows going round the whole thing.

The military ball which was given to dedicate the new armory was a less elaborate affair as regards the florist's work but very beautiful withal. Most of the decoration consisted of palms and evergreens which were staged at different points in the hall. The musicians were screened in by the graceful palms and back of them, still partly concealed by the evergreens, were seats and refreshment tables, while most of the decorating was done with draped banners and flags.

B. M.

Owosso, Mich.

Mr. Schleider, proprietor of the Sunny-side greenhouses, contemplates building four good-sized houses on the outskirts of the town. Mr. Schleider will also retain his present plant on South Washington street and will open a flower store.

Too much cannot be said in praise of Mr. Schleider's carnations and roses. Both look exceptionally fine, clean and well grown and his stock in general seems to be in excellent condition.

Mr. Schleider reports a brisk and encouraging trade.

6,000 BEGONIA NIVEA, AT REDUCED PRICES.

The New Everblooming Apple Blossom Begonia. We have a large stock of this grand winter blooming and summer bedding plant; it being covered with elegant panicles the whole year round, making it a valuable market plant. In color it is of a delicate pink when in bud, expanding through lighter shades to snowy whiteness when in full flower, giving it an apple-blossom appearance, that is unique, and what the ladies call "just lovely."

In order to make room, and to place in reach of all, we offer 6,000 plants only at reduced rates if ordered before March 1st, 1896, after which date, prices will be advanced. It is a most vigorous grower, propagates easily, and has come to stay. The plants are well branched, well established and first-class in all respects, and are sure to give satisfaction. Up to date florists should secure some of this stock for their floral work.

We guarantee safe arrival in good condition, and extras added to all orders of one dollar and upwards by express. Cash with the order. 70 plants at 100 rates.

JOSEPH HEACOCK,

WYNCOTE, PA.

NEW SEEDLING CHRYSANTHEMUM

MRS. ADELAIDE WHITE.

We have grown this for three years, and recommend it for exhibition, as specimen plant, or cut bloom. The *Florists' Exchange*, Dec. 7, '95, page 1190, said of it, "The flower is of the hairy Japanese type, the color is entirely different from anything we have seen in that class. The lower florets were deeply suffused with pink, the upper ones being a clear white color; the combination making a pleasing effect."

READY MARCH 15th, 60c. each; \$6.00 per doz.

Orders booked in rotation.

M. B. LITTLE, Clens Falls, N. Y.

Always mention the American Florist when writing to advertisers.

Bedford Station, N. Y.

A. J. Tharp has added to his former plant three new houses, each 18x125 feet, with potting shed extending along the north end 10 by 49 feet, in which is located the steam heating and pumping apparatus, which is done by a 25 horse power steel tubular boiler. The new houses are filled with carnations, McGowan, Scott and Portia being the principals, with a sprinkling of the newer sorts for testing. Portia has always done finely with Mr. Tharp, one whole house being filled with it. Alaska is doing quite well but is inclined to make short stems and is addicted to red spider. Bridesmaid does well with stems 24 inches long and very erect, not requiring staking, in fact Mr. Tharp does not believe in staking or tying up. His plants do not seem to require it, excepting a few of the Daybreak. He believes that if more attention was paid to cutting flowers, cutting the stems down to the plants, the nuisance of tying up or staking could be nearly or quite dispensed with.

The steam pumping apparatus is of no small note on this place. The water is furnished from a system of cisterns, which seems to hold out better than wells, and as they cost a very little under his method of making them it is singular they are not in more general use. This consists in simply digging a round or oblong hole, say 14 feet in diameter and 12 to 14 feet deep, and cementing the sides and bottom on the earth, one coat of Rosendale cement or of Rosendale and Portland and one thin coat of Portland; the last coat is put on with a whitewash brush. You can brick the top over or put on plank ing, put in your conductor and overflow pipes, and the cistern is done, and in his experience will never wear out. None of his have ever leaked.

The steam pump works under 10 pounds pressure, and can be made to throw the water with such force that red spider cannot maintain a foothold. There being two hose taps in each of the new houses and one in each of the old ones very often two or three persons water at once, there being a 50-foot length of hose in each house. Two men can water the entire place inside of 30 minutes. The cistern for holding the liquid manure is entirely outside and holds about 2,000 gallons. This has no leaders from the houses running into it, but is so arranged that it can be pumped full at any time, or as much put into it as may be required to make the liquid the proper strength. T.

Jackson, Mich.

The past week has been rather a busy one with the florists and between funeral work and wedding decorations, both Mrs. Clara Brown and Mr. Jos. B'essing had their hands full.

The banquet given by the Traveling Men's Association on the 14th inst. at the D Armory hall was quite an event and the decoration for the occasion was fully in touch with the liberal spirit of the knights of the grip, plants, cut flowers and smilax having been used in profusion and to good advantage. Mrs. Brown had charge of the decoration. Homo.

Ottawa, Ont.

Thos. Elmit has moved to Cummings Bridge, a suburb, and built there a new house 18x150.

John Graham has added a house 18x70. C. Scrim has rebuilt two houses and added one 10x130.

H. Parks disappeared last summer and has not been heard of since. ZERO.

News Notes.

INDIANAPOLIS, IND.—Mr. W. Bertermann has been confined to the house by illness for the past five weeks.

GREENVILLE, O.—James Frost has rebuilt his work-room, and has also built another house 12x65. Since he has been here he has rebuilt every house entirely, besides adding the hot water heating.

ROCKVILLE, CONN.—Mr. Theodore Standt has purchased the establishment of E. & H. Schmeiske and will continue the business. He took possession February 1. Mr. Standt was formerly of Union, N. J.

SPRINGFIELD, ILL.—H. L. Phelps recently arranged a fine decoration for a reception at the Leland Hotel. The mantel in the main reception room was banked with Bride roses and white primroses, a curtain of smilax falling over the mirror. Primrose and azalea plants were freely used, stairways and halls being garlanded with southern smilax. The decoration was highly commended by the local press.

HARRISBURG, PA.—Thos. Peters who bought McClintock's greenhouses has opened a new floral store in the place formerly occupied by the Melrose Floral Co., the latter firm removing to 3 South 4th street. The trade is better for cut flowers, and plants, this year than last; better flowers are wanted, and advance in price is not so objectionable as poor flowers, well grown Scott, Cartledge and Daybreak are best sellers in carnations; in violets Marie Louise is preferred to California.

LEBANON, PA.—The new establishment of Mr. D. Hammond Mish, erected last summer, consists of two three-quarter span houses, each 20x100 feet, with single thick butt glass, heated by hot water and with a boiler of the style described by Mr. Swayne in the FLORIST of March 16 last. The houses are devoted to carnations. Mr. Mish is very successful with carnations, and is of the opinion that he has struck a little carnation belt of his own of a very superior quality. The boiler referred to is working very well and giving excellent satisfaction.

Louisville, Ky.

Mr. J. E. Marrett, president of the Kentucky Society of Florists, entertained the florists Tuesday, Feb. 11, at supper. The Hon. Zack Phelps acted as toast-maker. The rooms were tastefully decorated with palms, smilax and pink flowers. The table had all the delicacies of the season, including the luscious strawberry. All the florists enjoyed themselves very much. S. J. THOMPSON.

PRESIDENT SCOTT is doing fully as well
as could be expected. His limb has been
in a plaster cast, and the fracture seems to
be joining satisfactorily. The greatest dif-
ficulty has been to keep the patient quiet.
It is thought that in two weeks he will be
up and around the house.

American Carnation Society.

The closing session of the New York
meeting on Friday afternoon, which was
in progress as our last issue went to press,
was characterized by a very light attend-
ance, many of the visitors having taken
the opportunity to go visiting among the
local growers. The election of officers
took but a few moments, there being no
contest on any of the offices, and the gen-
tlemen placed in nomination, as noted in
last issue, were unanimously elected.

Additional awards were reported by the
judges as follows on seedlings that arrived
late: Honorable mention to Fred Dörner
& Sons for Mrs. G. M. Bradt. It is of the
Helen Keller type, larger, but lacking in
fragrance. It scored 75 points. Certifi-
cate of merit to John Breitmeyer & Sons,
Detroit, Mich., for Mayor Pingree, a
pleasing shade of light yellow slightly
marked pink, long stiff stems, habit of
plant good.

M. Elmer D. Smith's paper, given in full
in our last number, was read by Mr.
Chas. H. Allen. Certain recommenda-
tions from the executive committee as to
changes in the by-laws were adopted
without discussion, and President Dörner
appointed Mr. E. G. Hill as delegate to
the executive meeting of the Society of
American Florists at Cleveland.

The question box was then opened.
The first question was as to whether the
growing of high grade carnations is prof-
itable. Chas. H. Allen responded, and
said that, from his experience in present
market conditions, it does not pay to
grow anything else. He claimed that a
grower can get as many well developed
high grade flowers from a given plant as
he can poor flowers, it being merely a
question of the grower's ability and good
judgment. Jas. G. Hancock here took the
floor in his own defense regarding the
position he had taken at the recent carna-
tion show in Chicago, claiming that his
opinions had not been correctly stated in
the published account. He said that he
did not advocate the growing of poor
flowers, as had been represented, but that
he believed a man must be governed by
his surroundings and existing conditions
as to what would be most profitable for
him to grow. He did not regard the ques-
tion as one of culture, as Mr. Allen had
done, but as one of varieties, and was
still of the opinion that more profit
would be found in standard varieties pro-
ducing a good quality of flowers in abund-

ance than in those varieties quoted as
extra high grade, and from which a lim-
ited number of blooms could only be
taken. Mr. Allen followed Mr. Hancock
up with an inquiry as to what sorts he
had in mind, and asserted that extra high
grade blooms of such varieties as Mc-
Gowan, Scott and other standard vari-
eties are coming to the New York market,
and bring prices accordingly. Mr. Dunn
said that it should be the aim of every
grower to produce blooms of highest
quality; even then he would still have
plenty of second grade flowers, and Mr.
Hill endorsed this as the proper stand for
all intelligent growers to take.

The second question was "What is the
best means to prevent overstock or glut
in the market?" "Kill off half the grow-
ers," came in quick response from the
back seats. "Make ten purchasers for
every one we now have who will buy ten
times as many flowers," said Mr. Han-
cock. "Place more of the rubbish on the
manure heap instead of on the market,"
said Mr. Dunn. Mr. Hill didn't regard
the distribution of rubbish as an unquali-
fied evil; he believed that when a person
began to buy flowers, even poor ones, he
would be apt to keep it up, and the low
grade flowers were likely to reach buyers
who would not otherwise begin.

The third question was "Which is better,
early or late planting from the field to the
house, especially in a dry season?" Mr.
Hill said that if a grower intended to
make an impression with new varieties
he must get his plants up early. Mr.
Weber made a good point by saying
that it should be borne in mind that if
plants were taken up late they would
miss the Christmas crop, and he believed
the end of August to be none too early.
Mr. Dillon preferred from the first to tenth
of October. Mr. Dunn said that more
depended on the condition of the plan-
s than upon the time of lifting. The time
to lift plants is when they are in proper
condition. Messrs. Shelmire and Hancock
agreed to this, and added that the time
bloom was wanted should also be taken
into consideration in lifting.

The next question was "What consti-
tutes a commercial carnation, and who
shall be the judge; the grower who grows
and sells the flowers or the grower who
is not able to grow the variety success-
fully?" Mr. Shelmire had prepared a
written reply, which he read as follows:

"A commercial carnation is a variety
which on dissemination proves to be a
good seller on the market, and which can
be grown, not universally perhaps, but by
a large number of growers, at a profit.
It need not necessarily be a large flower,
although that is desirable. But it must
possess health, vigor, productiveness and
a color or markings that please the pur-
chaser. The points desirable in a good
carnation are thrift, healthfulness, abun-
dant bloom, suitable color, perfect form

(double of course), strong calyx, long and stiff stems, large size, fragrance, adaptability to the numerous soils and conditions of the various sections of the country. Then it should make numerous cuttings, and they should root easily. It should be an early and continuous bloomer rather than throw its blooms into crops. It should transplant easily. It need not have *all* these points, in fact no carnation ever had or is likely to have; but the more it possesses of them the nearer it comes to being a money getter and a commercial success. Who shall be the judge? We'll, I should say the grower who grows them successfully would be a better judge than the one who cannot grow any particular variety. The latter is no doubt a good judge as to his own particular case; but his adverse judgment will not affect the standing of a variety that has proved to be of great use to many other growers. But the real judge will be the buying public. If the grower can supply in quantity and with a profit such varieties as the public want, then such kinds are first-class commercial sorts and worthy of being extensively cultivated. I would mention Scott as a shining example of a commercial carnation. And it will be noted that such varieties are very few indeed, and seldom take the premium when on exhibition for supreme honors."

"That covers the whole ground; Webster couldn't beat that," remarked Eugene Dailedouze as Mr. Shelmire concluded.

The two following questions, "Is a carnation that goes to sleep on the plant entitled to a certificate of merit?" and "Is a commercial florist engaged in the production and sale of seedling carnations a proper judge in awarding or denying certificates of merit to the productions of his competitors?" were received with merriment rather than serious discussion, and the last question in the bottom of the box "Is a certificate of merit awarded to the production of a member of the committee of any value?" met the same fate.

The premium offered by the *Florists' Exchange* for the vase of flowers showing the best keeping qualities was awarded to J. N. May for a vase of Bouton d'Or.

NOTES.

Where were the New York growers? Outside of the exhibits of C. W. Ward and E. G. Hill & Co. there were not as many flowers shown altogether as the average morning receipts of any wholesale dealer would amount to. The contributions from local growers fell far short of expectations.

Ju'ilee, Armazindy and Triumph from E. G. Hill and Della Fox from Myers & Samtman, having been certificated last year, were consequently ineligible in the seedling class, and were also debarred from competition in the general classes, not having been disseminated as yet.

The Palm Garden made an admirable exhibition room, but as an audience hall its effect on bared heads was rather severe, the penalty of exposure to the draught from the glass roof being for many a cold in the head.

E. G. Hill's Jubilee, H. Weber & Son's Bouton d'Or, J. L. Dillon's Crimson Sport and several vases of Eldorado were among the close competitors for the prize for "best keeping," which was won by J. N. May's Bouton d'Or.

An illustrated bulletin on bacterial diseases of the carnation is being prepared at Purdue University, Lafayette, Ind., and is nearly ready for distribution.

Copies can be obtained free by applying to Director C. S. Plumb.

The steamer Pilgrim, which brought the Boston delegation came up to her dock thickly coated with ice from stem to stern. "We're all in good shape," said Warren Ewell "because we came packed in ice."

Alongside each plate at the banquet was set a flask of Steinwein, decorated with pink ribbon, on which was incised N. Y. F. C. '96, which many of the visitors carried home as a souvenir.

Those who attended the initial convention of the Society of American Florists fully understand what are Cincinnati's qualifications for taking care of the Carnation Society next year. None better.

Speaking of societies it was noticeable that all the prominently active members of the Carnation Society were gentlemen identified with the S. A. F.

I. Forsterman, G. Bergman, P. B. Meissner, G. Messeberg, John Reid, and A. W. Bennett were the names of the "departed brothers" enumerated by ex-president O'Mara in his touching remarks at the dinner.

One of the prettiest features in the dinner decoration was a chandelier draped in smilax with one heavy garland of bouzainvillea thrown loosely across.

At the next club dinner a special play-room should be provided for those who think it funny to throw things at one another.

The plant classes in the schedule have proved inoperative. Some means of bringing out a good display of pot-grown carnations should be devised if possible.

Seedlings were judged by the following scale of points; color 15, size 25, substance and form 15, stem 20, calyx 15, fragrance 10.

Too bad, but the old "sleepiness" was apparent in most of the exhibits on the second day, cool pure air notwithstanding.

Galax leaves contributed by C. H. Ricksecker of Linville, N. C., were used with good effect on the exhibition tables.

The Lockland Lumber Co. had a nice exhibit of its specialties, and Edwin Lonsdale showed his new evaporating pan to many interested visitors.

The varieties Flamingo and Glow Worm were declared by E. G. Hill to be identical.

Score one more for Chester County. Eldorado is a good one.

The Broadway Central took good care of everybody.

President Sunderbruch is all right.

A LITTLE SIDE TRIP.

On Saturday morning a delegation of early risers who had been in attendance on the carnation meeting at New York started out under the leadership of Mr. Littlefield to visit the Cottage Gardens at Queens. We arrived there before breakfast, but Mr. Ward was equal to the emergency, and with the help of his most excellent wife a bountiful breakfast was soon spread and duly despatched. The new iron frame house being erected by Lord & Burnham, the propagating house, the ten or twelve houses of Scott, Daybreak, Bridesmaid, Meteor, etc., and last and most interesting of all, the seedling house, were inspected, and no one in the party could fail to have received much benefit from this visit to what seemed to be the ideal home of the carnation. After partaking of a lunch which had been prepared, and thanking Mr. Ward for his hospitality, we started for C. H. Allen's, where the principal feature was the Scotts, which were grand and beyond description. The

same kindly hospitality was extended by Mr. Allen, after which the party separated, some going one way and some another, all agreeing that the visit had been a most enjoyable and memorable occasion.

W. H. W.

Prairie Soil for Carnations.

"F. F.," Manitoba, asks: "Is soil taken from the prairie good for carnations? It is a black loam which dries out quickly. Would it improve it to mix sand with it?"

I hardly think black prairie soil is the right kind for carnations, but think it can be made good with clay soil and wood ashes. This prairie soil would undoubtedly produce a luxuriant growth, but be deficient in blooms. As it dries out quickly sand would be of no benefit at all, this soil is too light and needs something more substantial to help retain moisture and to give mineral nourishment needed to produce flowers. One-half prairie soil, one-half clay loam, with a good supply of decayed manure and a liberal sprinkle of wood ashes would make about the right proportion. If clay loam can not be procured, stiff clay would be advisable, if worked in well with the prairie soil, when dry. Still better if clay should be left to the action of air and frost for one season before using it. FRED DORNER.

Carnations Not Blooming.

We have a bench of Hinze's White carnation that are as healthy a lot of plants as could be wished, but they give very few flowers. What blossoms are produced are fine but they are few and far between; they sucker very badly.

What is the cause? Is there a remedy? Kansas. J. W. MARGRAVE.

There is no remedy. We can not change the nature of a variety. Hinze's White has proven to be a cropper most everywhere. Undoubtedly your plants will furnish a large crop in spring, but naturally the flowers would be more preferable now. The only remedy is to grow other varieties another season; varieties that will not come in crops. FRED DORNER.

MEMBERS of the American Carnation Society can obtain a very interesting and valuable illustrated bulletin on bacteriosis of carnations, and also one on fertilizers, that will prove very interesting reading, by sending their names to the secretary, Albert M. Herr, Lancaster, Pa.

Chrysanthemums

BY AUGUST S. SWANSON.

[Abstract of paper read before the Society of Minnesota Florists.]

I will not here attempt to go into any details about the cultivation of chrysanthemums, but hope you will by discussing the subject in its various aspects, be able to bring out all the little details that go to make up the successful cultivation and production of the finished specimen, plant or bloom. In a recent number of the AMERICAN FLORIST there appeared a

DECORATIONS FOR THE NEW YORK FLORISTS' CLUB BANQUET TO THE AMERICAN CARNATION SOCIETY.

short story about "Growing Chrysanthemums for Exhibition," by H. H. Becker, from which a beginner is apt to think it is a very easy matter to grow chrysanthemums for exhibition, if all there is to it may be said in less than a column. I am afraid that anyone jumping to that conclusion would have some very disappointing experiences; I know well enough that the chrysanthemum is considered a very easy plant to grow, so it is; but I have not found it the easiest thing in the world to get perfect specimens at the time you want them, even if I thought I had done my very best. No, the more I see and grow of them, the more do I appreciate the skill and knowledge of the one who can produce a sound solid flower, 12 inches in diameter, with perfect stem, foliage and color, as has often been done. These flowers are not apt to be produced, at least not in great abundance, without the strictest attention of the man who knows the requirements of the chrysanthemums. The same if you want to produce specimen plants, such as J. C. Vaughan exhibited at the Chicago show last year. They were plants in 10-inch pots, not over three feet high, but about six feet in diameter, with perfect crowns, one mass of color, with in some instances 400 fully developed flowers of very good size too. The same may be said of standards, I saw from the same exhibitor regular trees, about eight feet high, with as many as 200 very large flowers.

Now, I don't want to say it will pay us average florists to go in for trying to produce such specimens, because there is a great deal of labor connected with growing chrysanthemums like that, and unless you can dispose of them at from \$10 to \$20 apiece, I do not believe there is any money in them, but I do think there is money in growing first-class flowers for

cutting; as in my opinion there is no money in them except they are first-class.

To refer again to Mr. Becker's article in the AMERICAN FLORIST, he says about March 1 commence propagating, when rooted pot in 2-inch pots, when ready shift to 3-inch. Now, in my experience, I think I have come to the conclusion not to take cuttings so early for cut blooms; 5 or 6 years ago I used to commence propagating about that time, but have put it off later and later each year, till now I don't want a plant for benching that has been propagated before May, and even as late as June will do very well provided they receive liberal treatment after that time. With liberal treatment I do not connect the idea of putting the cutting in a 2-inch pot, afterwards shifting to 3-inch. I think a 3-inch pot none too big for a chrysanthemum cutting, and I would use 3½-inch for strong growing varieties, and be ready to bench them when they were rooted in their pots. I do not believe in frequent repotting of a chrysanthemum that is expected to produce a specimen bloom. The idea is to grow them on with just as little check and just as fast as possible after once started, and I do not care how carefully the shifting is done, the plant does receive a check every time. The same idea will apply to benching. I have cut off some time each year, last year I planted about the 1st of June, but I don't intend to plant earlier than the middle of July, and even later is better I think than earlier. The greatest trouble I have experienced about chrysanthemums in benches is to keep them a growing all the time, they are so apt to stop growing during hot weather and get hard, and if they do they will not produce the best or largest flowers, neither will they be quite so early.

I remember well enough when it was considered the proper thing to harden off a chrysanthemum just before setting its buds, we used to propagate early and grow on to good size, and after they had received the last shift they were placed out doors to ripen. This may have a tendency to dwarf the plants, make them set the largest number of buds, but as nowadays it is not the quantity but the quality we are after we have to change our mode of operating.

For cut blooms I much prefer the bench system as being most economical in labor, and also the most productive and space saving way, for single blooms it is enough to give 6 inches space between the plants each way. I prefer 4 or even 3½ inches of soil to more, as if you have more, especially if like mine, it is not apt to drain as quickly as desired, and I know of very few plants that are more impatient or more likely to suffer from stagnant moisture; there is though considerable difference in different varieties, as Ivory for instance will stand a wet and soggy soil much better than Golden Wedding and so forth.

As to pot plants, I like the idea of planting the young plants on a shallow bench for a couple of months, lift from there with clumps and pot about first to middle of September, or before the buds are set. This manner of growing when done properly is very satisfactory, as a very stocky plant may be produced with much stronger and larger foliage, than when grown in pots. Of course the potting up is the critical point, this must be done with some care, so as not to lose the foliage, but if done right and attention is paid to syringing and shading for a few days immediately after, few leaves need be injured. What I have said here, refers of course entirely to plants suitable for market plants, in from 7 to 8 inch

pots, for large specimens this system cannot be recommended.

The producing of specimen plants, I don't believe I will touch upon here; as I said before I do not believe it pays the average florist to go in for that class of plants, at least not here, as the people who are willing to pay a fair price for a specimen are so few that you cannot figure on disposing of but a very limited number.

As to soil I do not believe it makes so very much difference if light or heavy, provided it is rich and properly attended to with watering, but I do like a soil that will drain quickly even when packed very hard, as it should be for chrysanthemums. As to fertilizers that would answer the purpose, that would depend much on the character of the soil, if very light I should mix in a liberal quantity of rather fresh cow manure, give a good top dressing of the same material, if very heavy I should instead use some well rotted horse manure and top dress if at all with a very light coat of sheep manure (pulverized), and I would like to mix some bone meal with all soil, though I do not approve of using as some advocate a 20 per cent. part of the mixture, it may be all right but I would not dare to use it as freely as that, I consider a fiftieth part of the whole a very liberal allowance.

As to liquid manure some of the largest and best posted growers advocate using chemicals almost entirely; while I have experimented somewhat in that line, I do have not come to any practical results regarding which is the best. I consider guano and sheep manure with some soot added about the best for heavy soil, for lighter soil cow manure with some superphosphate. Nitrate of soda I consider a very good chemical fertilizer, I always use some of that but prefer to apply it on top of the soil in a dry state rather than as a liquid, as I think there is less waste.

I do not believe there is anything more I can say on this subject that will be of particular interest, as I need not mention about ventilation, staking and disbudding, these are things that of course must be attended to, but that is so generally understood that it would only be tiresome to most of you to go into details about it. As to shading, I never practiced it until last summer, I had a light coat of whitewash on the glass; I liked it so much that I think I shall always have a light shade on during the hottest part of the summer.

As to varieties, there is such an immense number of them that I shall not attempt to mention any, I will only say that I consider it better for the average florist to confine himself to a few sorts, say from ten to twenty, than to grow a large number. I could make out a list of ten varieties, that would satisfy me to grow, that would give a continuance of flowers from about the 10th of October to the end of the year. The leading colors are of course white or yellow, with some good pinks, the trouble seems to be to get any pinks that are pink. They mostly come grayish, purplish, or striped, with me. Fancy colors there is not very much use for in the general market here, of course for exhibition purposes they are useful, as for that purpose the greater variety and range of color the better; the more varieties the better. I noticed the green and blue ones exhibited by G. P. Rawson, at the Chicago show last year did more to attract visitors than anything else there as the newspapers gave them very extended write-ups as unheard-of novelties, so I say for exhibition purposes we must

have varieties, the more the better, as well in flowers, as in the manner of growing them. I like to see all sorts of fantastic and odd shapes in plants, as well as flowers. The chrysanthemum is a plant pre-eminently adapted to curious forms; you may very easily by grafting have a dozen varieties on the same plant and they may be grown in fan and umbrella fashion without any trouble.

Much has been said lately about how to keep the public interested in the annual chrysanthemum shows, whether this is something worth discussing I don't know, as we do not have much experience in that line yet, but I do hope to see a little interest taken in the matter of exhibitions here, after this. I hope you are

STYLE OF PLANT PREFERRED BY MR. SMITH
FOR BEDDING.

all preparing for one this year by buying up all the novelties offered. While on this subject, don't forget the little old fashioned pompons; for that purpose they are useful, if only as a comparison to the larger ones. I saw a very happy illustration of this at the Milwaukee show, in one exhibit there was an arrangement of pompons with a card "1845," while another arrangement of the newer larger varieties side by side with it was labelled "1895."

If it was not for the use we can put chrysanthemums to, in the way of getting up grand and effective shows, I believe it would be better for us florists if they had never been known, as I do not believe a retailer exists who would not wish he did not have to handle 'mums, but as it is the flower for exhibitions, I do not see why we should not take the same advantage of that fact.

Propagating Chrysanthemums.

In propagating chrysanthemums are the best results had from suckers or from shoots above ground?

How many eyes should be left on the cutting?

Do the larger or smaller shoots make the best cuttings.

What is best treatment for the cuttings?
F. P. D.

Good results may be had from cuttings taken from the stools of stock plants at the ground or from tips after they have made long growth or from tips of young plants. We have no preference in this re-

spect, if they are in a soft healthy condition. The size of cuttings vary greatly according to the variety, but are generally taken from 1½ to 2 inches in length, such being the most convenient size to handle.

It is not possible to establish a rule, that so many eyes constitutes a good cutting, for Ivory and such dwarf sorts may have ten or more, while those of Pres. W. R. Smith may not have more than four.

When the stock is ample select the strongest, but good blooms may be had from the less vigorous ones. We have seen good results from exceptionally thin, weak cuttings and also where scarcity of stock necessitated the single eye to be used, but as strong ones possess more vitality in themselves and will require less coaxing and time to make healthy plants are most preferable.

The cutting in itself has less to do with success than the conditions under which it is afterward grown. When the cuttings are potted in good friable soil, look carefully to the watering, especially at this season when the night temperature is rather low; such varieties as Ivory will not need as much as the stronger sorts, like Mrs. E. G. Hill, J. E. Lager, etc. At the first indication of yellow foliage withhold water until quite dry, then apply sparingly, till the healthy color is resumed.

Chrysanthemums are grown in so many ways that different dates of propagation are necessary to meet all requirements. For extra large specimen plants (bush or standard) cuttings should be rooted and potted on or before March 1; during April and May the bulk of those for exhibition blooms are taken and those in June will make good single stem and bloom plants, while those struck in July are best for demands after Thanksgiving. Each grower must consider his needs and prepare accordingly.

Those who expect to receive the novelties of the present year within a few days will do well by planting the original plants on a bench in about three inches of soil, four inches apart in the row, with 6 inches between rows, if they wish to increase the stock as much as possible. As soon as they have recovered from the effects of shipping and appear to be taking hold of the soil, the tips may be taken for cuttings. Flats may be used instead of the bench, when preferred, so they may be removed to frames outside as soon as the weather will permit, rather than occupy valuable space inside. This system is the most practical for those with limited space. If the chrysanthemums are to be bench grown it is important that ample stock be ready at the desired time, so varieties that are shy of cuttings or those of which the stock is limited, should be propagated now, if not already done and treated as advised for novelties.

With the exception of a few varieties which evidently require a long season of growth we would prefer plants from 2 or 2½-inch pots for benching and let them be planted before they are pot-bound. It is difficult to define the most suitable size and condition for this purpose but would recommend such as are short, stocky and well rooted. Some varieties are inclined to set buds at this season, especially where the stock has made long growth or the young plants are pot-bound. This is most noticeable during March, when the bright sun necessitates free ventilation and the cold air causes the wood to harden. Vivid and Morel is provokingly subject to this unwelcome condition.

It will be unwise to throw out the stock and buy anew; better doctor your own,

HOUSE OF MRS. PIERPONT MORGAN ROSE AT ROBT. CRAIG'S, PHILADELPHIA.

for it matters not from what source you secure it, it will bud under such conditions. Plant them in flats and place in the rose or forcing house, where they are not subjected to cold drafts and they will soon make nice soft cuttings.

ELMER D. SMITH.

Color in Vivian-Morel.

Please tell me how to treat my chrysanthemums to bring out the pink color in Vivian-Morel.

I have been successful with plant and blossom except color, which, for the last two years, was almost white.

Soil very sandy, enriched with rotten manure.

H. F. R.

Vivian-Morel is very sportive and unstable in its color, possibly more so than any other pink. We can not advise H. F. R. further than to give all the air possible; the more given the slower the development and the brighter the color; this will do more than anything to insure that deep shade so much desired. Strong liquid manure has a tendency to bleach them, if applied after they show color.

ELMER D. SMITH.

Best Soil for La France.

C. H. A. wishes to know what kind of soil is best suited for the La France rose, he has some growing in soil that was taken from a hill side, and has in it about one-third its bulk of coal ashes, the plants are not thriving, and he attributes the poor growth to poor and unsuitable soil.

La France is a very peculiar rose, thriving and blooming beautifully sometimes in poor houses and with very ordinary

treatment, while at other places where it is given the very best of care and every opportunity seemingly to do well, it positively refuses to do anything more than exist. I have seen it doing its best in a strong yellowish loam, approaching to clay, and this I believe to be the most satisfactory soil in which to grow this variety.

ROBT. SIMPSON.

The Morgan Rose.

Among the new roses of 1895 the Mrs. Pierpont Morgan has proved itself to be a most valuable acquisition and one likely soon to be found in every rose grower's collection. It has a strong sturdy growth with good foliage, resembling closely in this respect the parent, Mme. Cusin. It is very free to flower, making no blind shoots, every growth bearing a bud. The great objection to many new varieties and old ones too for that matter, is the large proportion of weak stems that come with every crop. The Morgan has no such defect; the smallest flowers from the weakest side shoots have a stiff strong stem abundantly able to hold the flower in any position it may be placed. It is so very double that it can be allowed to remain on the plants until almost fully expanded and will keep when cut in this condition longer than any other rose now in cultivation.

It usually takes more than one season to develop a new rose, to find out just what treatment it requires, soil, temperature, water, etc. This newcomer however seems to be at home at once, and Messrs. Robt. Craig and Edwin Lonsdale, who planted all the stock they could get, while giving it no special treatment are both very much pleased with its many good qualities, not the least of which is that they find it is appreciated by the public and is consequently much in demand. Mr. Craig says that it has paid him so far this season fifteen per cent more for the same amount of table space than Bridesmaid, which is his next best rose. It is such a free bloomer that he finds it beneficial to the plants to remove the buds from the small side shoots and

throw the strength into the larger and stronger growths.

Mr. Harris said in looking at a bench of it at Mr. Craig's that any rose as prolific as this he was afraid would soon become common, he had never seen anything to equal its blooming qualities.

The accompanying illustration is from a photograph taken at Mr. Craig's Jan. 13. The center bench only is planted with this rose and at that time the front row of 118 plants contained over 200 buds and flowers with color and three-fourths of them ready to cut. K.

Eel-Worms.

On page 722 of the FLORIST Mr. A. J. Pennock of Lansdowne, Pa., takes exception to what I say about these pests as regards their being found in the galls on clover roots. I do not generally say anything about these things that I have not proven before venturing an opinion, and in this case all I can say is that I have taken clover roots from various sections, digging them up as carefully as possible from the open fields, and more particularly from sections where this pest shows itself as affecting roses, and in nearly every case I have found an abundance of galls on the roots of clover in such sections, and when putting these same nodules or galls under microscopic test have never failed to find eel-worms in them. Again, I have examined a large number of clover roots in various stages of growth in sections where I could not find any trace of eel-worms on roses growing in the same soil and have failed to find the same class of galls or nodules on their roots; in many cases could not find any whatever. In some few cases I have occasionally found a root with some; these I have also carefully examined, and found the nematodes in them. Now if Mr. Pennock is right about all this class of plants always having root galls why did not these last ones referred to have any, or if it is simply natural for these galls to grow on this class of plants why is it so easy to find eel-worms in them? If Mr. Pennock can explain why some clover roots are free from galls and others from another section have plenty on them, both growing under similar conditions and procured within a few days of each other, I for one at any rate shall be greatly interested in the causes leading up to this to me rather knotty problem.

Mr. Pennock asks how many of these clover roots I have found with eel-worms in them. I cannot answer this question accurately as to numbers, as I failed to keep a correct account, in fact they are too numerous to count. On one occasion for the benefit of some friends I collected specimens from several sources and spent a whole evening examining them, and probably we dissected several hundred galls during that time, and to use the expression of one of the party, found eel-worms enough to stock the state of New York. This may be a figure of speech, but it expressed the general sentiment of all present.

Mr. Pennock says that root galls are natural to all leguminosae. Yes, and root galls are natural, or at least very often found on the roots of all the Brassica family, but the farmer who is growing a crop of cabbage for market and finds them affected with it knows well enough that his chance for a profit in that crop is very slight, and club root in cabbage and its family is caused by the same class of organisms. Again I have seen large clubs form on the root of a chrysanthemum; one in particular was brought to me some years ago as large as a mandarin

orange and about the same shape, in which I found the largest eel-worms I ever saw and in number too many to count. At the same time a clover root with galls about the size of a pin's head was brought from the same place; this was washed off with very clean water, carefully examined and the worms found in it shown to be of the identical family as those found in the club from the chrysanthemum root, though very much smaller in size.

If Mr. Pennoek will call here sometime early next summer and bring with him some clover roots with well defined clubs or galls on them I think I can show him plenty of eel-worms extracted from them, and I also think I can show him plenty of clover roots that do not have any galls growing on them unless they very materially change from former years, but I have already taken up too much space of your paper; my excuse for doing so is that I want to make this matter quite clear, as it is certainly a very serious question with a very large proportion of rose growers to-day, and if other growers in different parts of the country will please give their experience on this subject we may gain very much useful information, and no one will appreciate it more than

JOHN N. MAY.

Rose to Grow With Meteor.

Replying to the question asked by F. F. of Winnipeg, Manitoba as to what rose can be grown in the same house with Meteor, I would suggest either Perle or Kaiserin, if pink is more desirable La France might answer. None of these varieties will bear as high a temperature as Meteor, but if they are planted at the cool end of the house, or if the heating pipes can be changed a little so as to give a difference of from three to six degrees between the two ends of the houses, any of the above varieties may be grown with fair success in the same house with Meteor.

ROBT. SIMPSON.

Carrying Roses Over for Two Years.

Will Perle, Bride, La France and Kaiserin roses, if carried over for two years, give as many and as large flowers the second as the first year? If so, how should they be rested, and when should they be cut back? Should more soil be put on top of the bed?

E. W.

Pennsylvania.

As to the first question "Will Perle, Bride, Kaiserin and La France, if carried over for two years, give as many and as large flowers as the first year," the consensus of opinion is that roses generally do not give as many blooms the second year as the first (there are certainly some notable exceptions to this rule). I have seen two-year Perles produce in one month an average of 15 blooms per plant. The flowers are apt to be just as large, perhaps larger, on the two year old plants, but it is very necessary in order to have success that the plant at the end of the first year be in perfect health; resting a plant will not make it healthy.

If the roses in question are expected to bloom all through the winter months they should be rested in the summer, say during July, August and September, and at this season they can only be rested by withholding water. If it is the intention to have roses during the summer months this the season to rest the plants, and it can now be done naturally by gradually lowering the temperature until a point just above freezing is reached, at which temperature the house may be kept for

from four to six weeks; they will then be in proper condition for pruning. Some growers have good success from pruning this class of roses hard back, but I prefer to use the shears rather sparingly, trimming out the small stuff from the bottom of the plant and shortening back the strong shoots only a little. After resting in summer by drying off for about six weeks the plants may safely be pruned.

It is customary to loosen up the surface of the soil after clearing off all the leaves, etc., and give a good top dressing of half half manure and half soil with a good dusting of bone meal added. Should a considerable percentage of the plants show signs of disease a better plan is to lift the healthy ones and transplant in fresh soil, giving shade for a few days.

ROBT. SIMPSON.

A Case of Eel-Worm.

A subscriber living in Washington, signing, himself D., sends specimens of diseased roses, and asks the name of the disease and cure for same. The specimen received proved to be the very worst case of eel-worm that has come under my notice, the roots being completely matted together. It is impossible that such a plant could recover, or even exist for any length of time. If the plants are all in this state would advise D. to spend no time trying to doctor them, to dig up and burn will be the best remedy. If he is wise he will procure stock from healthy plants elsewhere and if possible change his soil. Much has been said in these columns during the last four months in regard to eel-worms and I would advise D. to carefully read the same and if possible carry out the suggestions there given.

ROBT. SIMPSON.

Fancy-leaved Caladiums.

Among the fancy-leaved caladiums are found some of the most striking foliage plants for exhibition purposes and for conservatory decoration, while a number of the stronger growing varieties are admirably adapted for outdoor hedging, providing they are given a somewhat sheltered position and an abundance of water. The varieties referred to in the present article are more or less representative of the various types of garden origin, and having been derived in a great measure from *Caladium bicolor*, a native of the lowlands of eastern Brazil, are most happy in a warm and moist atmosphere.

The culture of caladiums is quite easy, liberal treatment both in soil and moisture being one of the first rules to be observed during the summer, the season in which their growth is made, while during the winter they can be stored under a bench in a warm house and will only need an occasional watering to keep the tubers plump and to prevent dry rot. In the early spring (between March 1 and March 15 is a good time) the tubers should be started into growth, and this is also the season for propagation, the latter being effected by slicing off small portions of the tuber with an eye or bud in much the same way that potato sets are treated, except that the caladium sets are much smaller. It is a wise precaution to dip the cut surface of the tubers in some air-slaked lime to prevent rotting, and they should then be planted in pans or flats of sand or light, sandy soil, placed in a warm house and kept moist, and in a short time will be started enough to be potted off into small pots.

If large specimens are required for exhibition

the tubers should not be cut to any great extent, but should be potted in either 4, 5 or 6-inch pots according to the size of the tuber, using light sandy soil for the first potting, and should be given but a small quantity of water until growth has fairly commenced, a little bottom-heat and a temperature of 65° or 70°, being most suitable for this stage of the operation. After the tubers are nicely rooted, which usually occurs by the time the first leaf expands, the plants should be given a shift, from a 4-inch pot to a 6-inch or proportionately for the larger sizes, and a somewhat heavier compost may be used, in which is mixed from a fourth to a third of short manure. From this time forward the main points to be remembered in caladium culture are abundant watering and plenty of stimulants, and the temperature of the house in which they are grown should not go below 60°, but a short time before using the plants for exhibition they should be hardened by increased ventilation, else the foliage might flag upon exposure.

When in full growth these plants should be regularly syringed to prevent the appearance of red spider, but after the growth is completed and the foliage begins to show signs of wear water should be gradually withheld until the leaves are all gone, when the plants can be stored away as before directed, either leaving the tubers in the pots in which they have been growing or shaking them out of the soil and placing them in boxes of sand, the former method being preferable, though not always convenient from lack of space.

The following list, though necessarily incomplete, includes some of the best varieties, and is probably sufficiently large to supply the needs of many growers.

The first, *Caladium argyrites*, is quite a dwarf grower, seldom getting more than one foot in height, and has light green leaves that are much veined and blotched with pure white. Being so small in growth it is better to plant several tubers in a pan in order to make an exhibition specimen, but whether this is grown singly or in mass it is one of the most beautiful kinds in cultivation.

Alfred Bleu.—A strong grower with large green leaves, the center of which is marked with flesh color, and the remainder spotted with white.

Baron de Rothschild.—Deep red center and red spots on green ground.

Belleymer.—Leaves mostly white with dark green veins, and sometimes flushed with pink.

Chantini fulgens.—Very handsome metallic green leaves with white spots and crimson center.

Clio.—Foliage rose colored, shading to white, and with green veins—a very beautiful variety.

Dr. Boissudual.—A strong grower with large leaves marked with crimson and white somewhat in the style of Chantini, but quite distinct.

Duchartre.—Very good as a large specimen, the leaves being mostly white with green veins, and spotted with red.

E. G. Henderson.—An old sort, but good for variety—rose spots and crimson center.

Felicien David.—Center of leaf dark carmine, surrounded with white and veined with red.

Golden Queen.—Leaves golden yellow and very beautiful, but most of the yellow varieties are not very strong growers.

Lamartine.—Crimson center, with white and red spots.

La Perle du Bresil.—Particularly at-

FANCY CALADIUM ALBERT VICTOR.

tractive; leaves white, flushed with rose, and veins dark green.

Louise Duplessis.—Also very good. Leaves white with green margin, and veined with red.

Meyerbeer.—A strong variety with white leaves, veined with green and having red mid-rib.

Murillo.—Foliage having metallic sheen, center red, and with crimson blotches.

Prince Albert Edward.—Very large leaves, the midrib and veins red, and the dark green ground much marked with white.

Princess Alexandra.—Rose colored leaves with green rib, and bordered with crimson; very handsome, but somewhat weak.

Some idea of a nicely grown specimen caladium of moderate size may be had from the accompanying cut of C. Albert Victor, also a good variety, and fairly represented in the illustration.

W. H. TAPLIN.

Violets Damping.

In regard to violets damping off, I would recommend coke screenings instead of sand, as the latter closes up the ground too much, whereas coke keep the same open. I have used it to great advantage with primroses and other soft-wooded plants.

I find this also an excellent material for propagating and use it either clear or mixed with sand according to the condition of the plants to be propagated. For soft-wooded cuttings or succulents I generally use it clear. Cuttings in this material will seldom damp off and they root very freely. I have also used it for mixing with potting soil instead of sand with excellent results, and of course it is good for drainage on benches.

The coke screenings can be had at almost a less cost than sand. Often they may be had simply for the hauling, though of course they must afterward be sifted to suit.

This is not anything new. We used it in Erfurt long ago and have always preferred these coke screenings to sand, being more porous and not liable to sour, also warmer than sand. HENRY MELDE, California.

Water Supply.

I wish to secure my supply of water for two greenhouses, each 20x100, and an acre of ground from a well with windmill.

How large should I make the supply tank and how high place it to gain the proper force of stream for watering roses growing under glass, using one-inch hose? How should I arrange to keep the water in the tank from freezing, if so needed, by cheapest means?

Will mineral or slate water, which we find here very much, damage plants?

Defiance, Ohio. CHRIST WINTERICH.

In building a water tank for the purposes indicated it is best to make provision for a reserve supply, for windmills sometimes fail at a critical time from lack of wind. It would therefore be best to have a tank of not less than 5,000 gallons capacity, and a still larger one would probably prove a good investment in a dry season, the watering of outdoor stock requiring a very large amount of water if done thoroughly.

If the bottom of the tank is elevated 35 feet above the ground it will give a pressure of about 15 pounds per square inch on the hose, allowing a small margin for loss from friction. This pressure will answer fairly well for syringing roses, if a nozzle with a small aperture is used on the hose.

If the greenhouses are heated by steam I would suggest running a line of steam pipe up into the tank to a coil placed in the bottom, in order to prevent freezing, but if this is not available the next best method would be to place a small base

burning boiler (such as are used for laundry heating, etc.) beneath the tank, and run connections of 1½-inch pipe from the boiler to the coil in the tank. The cost of such an arrangement would probably not exceed \$35 or \$40, and the expense of running it would be but a mere trifle.

It is impossible to say whether the use of "mineral or slate water" would be injurious to plants without knowing what minerals are contained therein, and this could only be properly determined by analysis.

W. H. TAPLIN.

Carpet Bedding—Poppies.

Although "carpet bedding" is fast traveling to the rear, I am still required to plant each year a particular bed with a certain design, viz: two letters with background as fancy as possible. The bed is 5½x8 feet and in close range of drive and sidewalk. Alternanthera, coleus, pyrethrum and feverfew have all been used in turn and have, to me at least, become somewhat monotonous. Will some kind friend suggest a change with a big C. I have been thinking of sedums and portulacca? What about the portulacca? What is the best sedum, medium height? More light.

I also would also like some advice about poppies. I want a 14-foot bed of Shirley and other singles, but am in doubt in regard to the best way to get them there. To sow the seed to follow late tulips would hardly do; to transplant is also difficult.

F. H. C.

Why not try santolina, variegated thyme, variegated sage, echeveria or cacti? They are all excellent background plants and their colors will harmonize with almost anything. The trailing variegated abutilon makes a beautiful carpet and can be kept very low. As to the sedums, there are some that are fine. If he is in search of a pale blue or lavender, *S. caeruleum* is exquisite. If he wants a solid carpet of green there are a number of the terete-leaved sedums that are good. In England *S. lydium* is much used. Our native western *S. stenopetalum* is good also. If the flower is not wanted, these sedums will stand any amount of shearing and can be propagated with the greatest ease.

In regard to the Shirley poppies to follow late tulips, if he does not wish to sow them where they are to stand and has difficulty in transplanting them, he can start the plants in small pots, one to the pot, and he will then have no trouble in making them live when set in his border.

Buffalo, Feb. 14, 1896.

J. F. C.

Swainsonas Not Blooming.

Would like to know why my *Swainsona alba* do not bloom; I planted them on a bench in my carnation house in September (temperature 50° at night), in four inches of soil. They are healthy, but the buds all dry up as soon as they form, and they have not produced one bloom all winter.

SUBSCRIBER.

It is not easy to make reply without seeing the plants and the conditions under which they are growing. It may be that the soil is too rich, as the *swainsona* will not stand much rich food; or the soil may be kept too wet, as it does not like too much moisture. If the soil is in any way loose it is best to pound it solid, and keep the bed rather on the dry side than giving it too much water. In all my experience I have never seen the buds dry

up in the temperature indicated, excepting when manure water has been given, especially that which contains too much nitrogen. E. L.

Pteris Tremula.

How is *Pteris tremula* propagated? If from seed please state when and in what temperature they should be sown, also where the spores can be obtained from.

SUBSCRIBER.

Pteris tremula is propagated from spores, and if the latter are sown during March the seedlings should become useful little plants in 3-inch pots by next fall or winter. Fill some 6-inch pans or pots with fine soil, water thoroughly, then sow the spores on the surface, and cover the pans with panes of glass or place them in a propagating frame with a temperature of 65°, and keep them well shaded.

The spores are offered by some of the large seed houses, though it is perhaps more satisfactory to secure a few plants and grow them on for this purpose.

W. H. TAPLIN.

Adiantum Cuneatum in Texas.

Will *Adiantum cuneatum* do well here in central Texas? I bought some plants from the north in the fall of '94, transplanted them and had them in splendid condition the first spring, '95, but when the hot summer came they got climate fever and have had it ever since, more dying than living. O. O.

There seems to be no particular reason why *Adiantum cuneatum* should not grow well in Texas under proper treatment, unless the soil in which the plants were grown contained too much alkali.

This fern thrives ordinarily in good loam, but in the dry atmosphere that often prevails in your state will no doubt require a great abundance of water, and should also be shaded from full sunshine during summer. A low greenhouse or deep frame, well ventilated, would probably have some advantages over a greenhouse of ordinary height for the summer cultivation of *Adiantums* in your locality.

W. H. TAPLIN.

Wood Lice.

In the issue of December 28 last appears an article headed "Remedy for wood lice," signed Robt. Simpson, in reply to W. J. A., recommending sugar and Paris green, with directions as to its use.

We have tried it, and find the "half has not been told," for it knocks the wood lice sky high, in fact is the only thing we have found of the many so-called remedies which had any effect on them.

We found the next morning after applying the remedy that the wood lice had evidently been waiting for something of the sort, as they cleaned it all up nicely, and as a consequence were laid out and dead all over the rose beds.

Two or three applications each week for a time will rid the houses entirely of this pest, in fact is the only thing that will do it. Thanks to Brother Simpson.

Evansville, Ind. J. H. WADE & Co.

Evaporating Tobacco Juice.

In the absence of steam heat "Gardener" can evaporate nicotine in shallow pans over an oil stove or paint it on his pipes, and he will not evaporate too much if used with common prudence. There are several qualities of nicotine on the market

of different degrees of strength; full directions accompany the goods.

Has "Gardener" ever tried the freezing process for killing greenfly? A few degrees of frost for a few hours at a time will give the fly a decided set back and not materially harm the lettuce.

GEORGE SALTFOED.

Swainsonas.

The probable trouble with F. F.'s swainsonas is they have too much root room. If the roots find unlimited space to spread in the foliage will increase to an enormous extent, but with few flowers. If F. F. will cut away the soil around the plants, leaving about a square foot of surface to the plant and confine the roots to that space, he will probably get flowers in abundance. The plants need a little starvation. His temperature of 55° is all right. W. S.

Little Gem and Black Callas.

Replying to Wm. Stephan's inquiry as to growing Little Gem and black callas, I use a rich sandy soil, always keeping the plant in as small a pot as possible, and when thoroughly rootbound shift to one size larger, never using any larger pot than a 4 to 5-inch. I keep them at a temperature of 65° at night, giving plenty of water through the day.

JAS. S. WILSON.

Boston.

The shortness of crop at present on roses has the effect of keeping the market well cleaned up and maintaining prices regardless of the fact that Lent is with us. As to carnations the same conditions prevail, only in an aggravated degree, for in white carnations, which are more of a staple article than any other color, there is scarcely a grower who is turning out decent flowers. Mrs. Fisher, which has been hitherto the standard variety for this market, has gone back completely on even those growers who have made a reputation on this variety as a specialty; McGowan has never amounted to anything in this vicinity, and the result is that to-day prices ranging from \$2 to \$2.50 per hundred are being paid, of necessity, for the most miserable quality of stock. Colored carnations have to show quality before they can command good figures; white goes because it is white, regardless of grade. There is a little fortune awaiting the introducer of a white which will be an all round success in this neighborhood. Bulbous stock goes slowly as cut bloom, but for pans of hyacinths, narcissus or tulips there is a fair demand. Lilies are more plentiful and cheaper. Violets ditto. Smilax has shortened up and has advanced in price, with the probability of its going still higher before long.

D. F. Roy, gardener at the Converse estate, Malden, has an exceptionally fine strain of cinerarias in bloom at present, and the houses throughout are in better shape than ever before.

Geo. W. Wilson has been cutting a few Magnas and Brunners, but will not begin on the main crop for two weeks. The buds are tremendously large, and indications are for a crop of unprecedented quality.

David Allan has been obliged to give up business on account of ill health, and has gone to Biltmore, N. C., where he will be the guest of his friend, Robert Bottomley, and it is hoped his health will be fully restored under the influence of the salubrious climate.

P. Welch and Kenneth Finlayson have

both been on the sick list, but Mr. Welch has recovered so as to be able to come in to business, and Mr. Finlayson, whose trouble is nervous prostration, is slowly convalescing.

Thos. H. Flynn's residence at Wellesley Hills was destroyed by fire on the 9th inst., together with most of the contents. A flaw in the chimney was supposed to be the cause.

Ed. Hatch celebrated his own birthday on February 22 by inviting a number of his gardener and florist friends to dine with him. As usual, all had a good time.

Visited Boston: H. H. Battles, Philadelphia.

New York.

Spring-like weather combined with the cessation of society frolics begins to have its effect on the quantity of cut flowers in the market and the prices quoted, and unless the experience of former seasons is reversed depreciation and accumulation will be rapid. From present appearances roses will be the last to go. Violets and all sorts of bulbous stock are already badly in the dumps. Carnations have received a little benefit from the recent exhibition, and fancy bloom is in demand. Mignonette shows signs of over-stocking. Easter plant growers are bending all their energies and exercising all their skill and judgment in the effort to get everything in just at the right moment.

The carnation meeting attracted a larger number of visitors from a distance than has been seen here for a long time, and they made the most of their opportunity to inspect the many far famed establishments in the vicinity, J. N. May, C. W. Ward, Chas. H. Allen, Pitcher & Manda, J. H. Taylor, Ernst Asmus, Dailedouze Bros. and others all coming in for a good share of attention, which they repaid with generous hospitality. These jolly little excursions were not among the least of the enjoyable features of the convention.

Adolph Ladenburg, the wealthy banker who took such an active part in the initiation of the chrysanthemum shows at Madison Square Garden a few years ago, and on whose place at Westbury Station, L. I., Griffin's famous tuberous begonias are grown, was missed from the steamer Niagara on her passage from Nassau to New York on the morning of February 20, and it is surmised that he fell overboard during the night. Mr. Ladenburg was 37 years of age.

H. A. Siebrecht sailed for Trinidad, West Indies, on February 20 for a stay of ten or twelve weeks.

Visited New York: A. F. Woods, assistant Chief Div. Veg. Phys. and Pathol., Dept. of Agriculture, Washington, D. C.

The North Hudson County Florists' Club has elected the following officers: President, T. Baumann; vice-president, E. Baumann; secretary, P. Fisher; corresponding secretary, F. Lehnig; treasurer, H. C. Steinhoff; sergeant-at-arms, H. Steiger.

Pittsburg.

The general trade this week has been very fair, considering the falling off in large social events owing to the Lenten season commencing, and even with this drawback, the florists have been busy, but a great deal of their business has been funeral work. Stock is plenty and prices about as usual. Hyacinths and tulips are coming in in greater quantity and of good quality, while there seems to be no end to the stock of carnations.

Mr. McClements is out again attending to business after being confined in the house for a short time, he is not entirely well, but says he has not time to lay off at present. The other florists on the sick list on all reported as improving.

Mr. John Bader, Fred Burki, and Ben Elliott of Elliott & Ulam, have arrived home from the Carnation Society meeting; they were very well pleased with what they saw and report having had a very good time, being well entertained.

REGIA.

St. Louis.

A slight drop in the prices of roses was the only noticeable feature of the cut flower market the past week. In the retail line business is fully as good as might be expected in the days of Lent. There are no large weddings or receptions, but some of the West End florists are kept quite busy with dinners and luncheon decorations. Scanty production rather than large demand is responsible for the fact that there is as yet no troublesome overlock of anything excepting perhaps *Harrisii* lilies and valley. There are a great many poor roses coming to the market; of American Beauty this is especially true. The proportion of deformed discolored blooms is very large, and number one blooms are few and far between with most growers. Other roses in their class are plentiful and of improved quality, yet there is no apparent glut of any one variety. Brides and Bridesmaid bring from \$4 to \$8, Woottons go at \$3 and \$4; some extra fine bring \$6, Perles \$3 to \$4, Meteor is of much better color than it has been; good stock finds ready sales at from \$5 to \$8. Carnations are plentiful and of fairly good quality. The common sorts don't bring over \$1. Fancy such as Daybreak and Scott sells at \$2 and \$3. Bulb stock of almost every variety is very slow. Daffodils are a drug and Dutch hyacinths are only fair in demand. Valley is plentiful and cheap. Romans and tulips are good but very slow. *Harrisii* are coming to this market in large numbers and sell slow, and the market will be overstocked by the end of the week. Prices for extra good long \$8; most of the poorer ones are disposed of at from \$5 to \$6. There is little demand for callas. Southern violets are still coming in and sell at 10 cents per 100. Home grown hold their own at 25 cents; double \$1 and \$1.50. The weather opened up this week clear bright, and warm, and if it keeps up every wholesale house in town will be overstocked and flowers of all kinds will go begging.

An excursion made up of Emil Schray, F. J. Fillmore, Julius Koenig, Sr., and C. A. Kuehn, went over to Belleville, Ill., to pay a visit to the different florists, among those they visited were Wm. Huckle, E. W. Guy, Adolph Fehr, G. Grosshart, St. Clair Floral Co., West End Floral Co., and N. Semmler. They found Messrs. Huckle, Fehr and Grosshart sick, but the rest were up and enjoying good health. They report that each place looked in tip-top shape and prospects good for lots of cut blooms for the Easter trade.

Mr. James Colbert of Fort Scott, Kan., was a visitor and spent a week in St. Louis looking up his old friends. He will return in a few days to take his old position with Mrs. Patterson.

The next meeting of the Florists' Club will be held Thursday afternoon, March 12, at 3 p. m. The club expects a lot of new carnations to be shown by those who could not get them here in time for the last meeting, and other very impor-

tant business will come up. A large attendance is expected.

Thomas Carroll expects to cut a large lot of white sweet peas for Easter.

Mr. Geo. M. Kellogg of Pleasant Hill, Mo., was a visitor this week. Mr. Kellogg says that he is about to build four new houses; each one will be 300x30, all of hard wood, and expects by June to have 35,000 feet more glass, making a total of 100,000 feet. These new houses are being built for American Beauties only.

The Bowling Club had a very interesting meeting Monday night, and ended the series of 13 games. In the roll Monday night the highest three games rolled were by J. J. Beneke, 595; second C. Beyer, 567; third C. Kuehn, 548. The highest single score was made by J. Young, 247; second C. Beyer, 206; third Beneke, 205. With the series just ended J. J. Beneke wins the medal with 2,544 in 13 games, F. C. Weber second with 2,389 and D. Helwig third with 2,241, the highest single game rolled during the series was made by F. C. Weber, 261; second J. Young, 247; third E. Schray, 240. Chas. G. Fleckenstein and all Bauer, commission men became members of the Bowling Club, and will roll with the club every Monday night. J. J. B.

Toronto.

Last week trade began well with the bal poudre and several other large social entertainments, but since the advent of Lent and the donning of sackcloth and ashes by all the good and pious people of this pious city, all such frivolities are laid aside until after Easter. However Lent even could not prevent people from going to hear Albani on Friday last, on which occasion a considerable number of flowers were used. Several notable citizens have even gone so far as to die since Lent came in too, their demise creating a demand for a good lot of large designs, so that putting all things together Lent has not made itself much felt among the florists yet.

Dunlop reports roses coming in in larger quantities and very fine now although there are not enough yet to meet the demand. Meteors especially are very good and of splendid growth of stem. Country retail trade not so large this week. Azaleas have been selling very well this year, though the plants have averaged a smaller size. Hyacinths in pots made quick sales if offered before being too fully grown.

The Gardeners and Florists' Association meeting was again a lively and very interesting one. After routine business Mr. E. Collins of the Horticultural Gardens read a paper on his method of cultivating cyclamens and there was a good discussion thereon. The postponed discussion on Mr. Tidy's question how to protect the retail trade from the effect produced by departmental stores was then taken up. These stores are Mr. Tidy's bete noir and there is no doubt but what the retail stores do feel the effect of them just now and no doubt some of the smaller stores will have to shut up, but it seemed to be the general opinion that men doing the class of business that Tidy and Dunlop and a few others do will have no trouble in holding their own by always keeping the best stock, even if they have to pay a little higher price for it. Departmental stores will do a different class of business and many people buy flowers and plants there who would never think of entering a florist's store. The extent of the trade generally will thus be consid-

erably enlarged, making it better for the growers and the few high class retail stores left. One or two of the speakers thought that the departmental stores would soon get tired of the business, but others again thought they were in it to stay. At any rate they are changing old methods of doing business and the man who does not catch on to the changes and keep himself up to date is going to get left. E.

Washington.

The season which closed last Tuesday was one of the most brilliant for a number of years at Washington. Both the official and resident circles have entertained handsomely and extensively, the only complaint being that the time was too limited. There have been no complaints heard of nothing to do for the coming forty days and nights. The program up to date is filled with amusements. While society may not indulge in dancing, card parties, musicals, readings and various other forms of amusements will still go on.

The final cabinet dinner of the season in honor of the President and Mrs. Cleveland was given last Tuesday evening by Secretary and Miss Morton. The idea that was effectually carried out was novel and unique, and suggestive of agriculture in every way. The decorations of the dining room were novel and effective. The ceiling was decked with a net work of smilax, in which burners of incandescent lights gleamed. The mantels were banked with adiantum and red carnations, the mirror frames wreathed in smilax in which were red, white and blue lights. The centerpiece was a large plow made of red carnations and smilax. Four large stacks made of yellow spun sugar and piles of miniature vegetables made of sugar were placed near the centerpiece. At the four corners of the table were wheelbarrows containing confections in the form of vegetables; the ices were served in tiny hay wagons; punch was served in the shape of apples, peaches and pears.

Another brilliant event of the winter and the one for which the most elaborate and lavish preparations are made was the Washington Assembly, which took place last Monday evening at the Arlington Hotel. The ball room of course was the center of attraction. The ceiling was covered with southern smilax, in which were set hundreds of electric lights. The mirrors (which begin 4 feet from the floor and extend to the ceiling) were framed with galax leaves. Huge white and magenta bows of ribbons were arranged among the garlanded mirrors with striking effect. The only flowers used in the room were jonquils, thousands of these spring flowers being used in banking the mirror rests. At the end of the room screening the orchestra was a bank of palms. The five recesses were banked with palms and ornamental foliage plants to produce a grotto effect. The four large parlors which on this occasion formed a suite were elaborately decorated. The first drawing room of this suite was decked with long-stemmed American Beauty roses, palms and foliage plants. Suspended over the mirror was an immense wreath of box tied with Beauty ribbons, the end of which were lost among the plants at the base. Upon the table in the center of the room was a large vase containing 75 of these gorgeous blooms. Parlors two and three were also decked with palms. Suspended over the two mirrors was a wreath filled with cattleyas, tied with ribbon the shade of the flowers. The base of the mirrors was a

mass of Farleyense and cattleya. The doorway leading into the ballroom was framed with plants. The adjoining room was also an American Beauty room. Supper was served on 56 small tables; in the center of each table was a vase filled with roses; Beauties, Bridesmaid and Meteor, with sprays of lilac were the flowers used on these tables. The favors were of jonquils and pink carnations, 75 of each.

REYNOLDS.

Philadelphia.

There seems to be enough doing to keep things from becoming stagnant, and there is no present danger of a glut such as is expected in Lent. The weather has not been favorable to an overproduction, in fact in some lines there has been even a scarcity, good Beauties being quite hard to find. Most of the other kind of roses are to be had of fair quality. Prices remain much the same, with a tendency to a lower range in a short time. Quite fair Brides, Bridesmaids and La France can be had for \$6, while the best sell for 8 to 10. Brunners are in fair supply at from 3 to 4 per dozen. Smith & Whitely, Anderson, Burton and Heacock are all sending in this variety. Messrs. Lonsdale and Craig have Morgans in quantity, considering the amount of square feet of space occupied; this rose is becoming a favorite with the public on account of its good keeping qualities.

Carnations are plentiful and will be likely the first flower to accumulate; as yet they go fairly well at \$1.50 to \$2, with the culls selling for from 5 to 10 per thousand. Violets are moving lively at from 50 cents to \$1 per hundred, according to quality, the common figure being 75 cents. Valley, tulips and daffys move slowly, valley particularly being hard to sell. The commission men are receiving big lots of stock. S. S. Pennock has carnations by the thousand, and an order for from fifteen to twenty thousand could be filled at almost any time. He handles quantities from the Chester and Lancaster County growers. Thompson Bros. of Kennett Square are sending him large lots of Eureka, their new pink, a good seller; thousands of McGowan are also sent in by this firm. J. L. Edwards sends fine Portias. C. P. Bernard sends in Daybreak by the thousand, his last shipment numbering over two thousand. H. K. Hicks has fine Scotts. E. J. Weaver of Lancaster County has extra fine Daybreaks and Portias; his violets are also good. Jacob Weaver is cutting some very fine Scotts. Mr. Pennock says that carnations have run better this season, the quality being more uniformly good than in previous years. W. J. Baker is also receiving fine flowers from his consignors. G. F. Christie of Clifton Heights has number one Daybreaks, and his new seedling Sunshine is hard to beat. W. P. Brinton, Christiana, sends in fine Tidal Wave. Scott and McGowan. J. J. Styer of Concord has Thos. Cartledge, Scotts and Portia that always bring top prices. Old Hinze's White is still doing well by Sanders of Roxborough and sells well. J. S. Ashbridge, Downingtown, sends Brides and La France that sell at sight. Mr. Baker reports business as very good, the past month being particularly so.

John Albrecht, West Laurel Hill, is building a residence and adding two greenhouses to his plant.

John Brogan, the Eighth street florist, is about to open a store on Ridge avenue, above Broad.

La Roche & Stahl are about to move to 11th street, above Chestnut street; a

raise to \$7,000 a year was a little too much even for their very desirable corner.

The next meeting of the Florists' Club promises to be a very attractive one. The social features are to predominate, and if the half that is promised by the chairman of the house committee, Mr. Westcott, materializes, no one will go away dissatisfied. There is to be a social feast, singing, recitations and speeches. Pipes and something to fill them will be within reach. A substantial lunch with all the etceteras is also in the bill, and all that is needed to make the occasion a most enjoyable one is a good attendance. "Come one, come all," as they say on the show bills; let there be an old time gathering.

Visitors in town: W. J. Palmer and D. B. Long of Buffalo; E. G. Hill of Richmond, Ind.; Mr. Nicholson of Boston, E. Wienhoeber of Chicago.

We miss that bright Buffalo letter; expressions of sympathy are heard on all sides for Mr. Scott and the hope expressed that his recovery will be a speedy one.

John Burton is laid up with a bad cold.

The boys who attended the carnation meeting in New York returned home very much pleased with their trip, and especially were they delighted with the hospitality enjoyed at the hands of the New York Florists' Club. The banquet with its magnificent decorations and the unbounded goodfellowship of the members, who did all in their power to make everybody happy, made the occasion one that will ever remain a bright spot in the memories of those fortunate enough to be present.

K.

Chicago.

The combination of warm bright weather and Lenten dullness has changed the conditions of the flower market and prices have dropped decidedly. The rose growers who were cutting few flowers for two or three weeks have all come into crop at once and flowers are very plentiful and improved in quality. Very fine Brides and Bridesmaids of a size and color to gladden a grower's heart are being cut by Reinberg Bros. and Bassett & Washburn. The latter firm shows some Siebrecht of the large size and rich glowing color seen in the advance specimens before the rose was disseminated; it is true the stem is still weak, but there is sufficient inducement to expect better results next year.

Carnations are more than plentiful. Prices have dropped to 50 cents in large lots and we hear of an order from a neighboring city from one of those philanthropists who sell everything from a paper of pins to a house and lot, for 50,000 carnations at this price. No doubt they will be sold on the bargain counter for about 11 cents a dozen and we may expect a touching lament from the florists in consequence. Good stock stands at about 75 cents to \$1.25, with fancies at \$2.50. Daybreaks are very plentiful. Violets are in large stock, prices varying from 25 cents to \$1. Bulb stock has not dropped much, because it couldn't go much lower. Local trade is poor, but the fakirs who had been hibernating for some months, have bobbed up again and patrol State street to avoid the removal of stands, which are now interdicted by the city authorities. Shipping trade from small towns is good; from large cities it is very dull.

At the meeting of the Florist Club last Thursday evening seven new members were elected and much other routine business transacted. A large plant of Cali-

fornia violet bearing 35 open blooms was shown by Mr. Jas. Hartshorn. He is very favorably impressed with the variety, which he finds bears probably ten times as many flowers per plant as M. Louise. He has found a ready sale for all the flowers he has cut at 75 cents to \$1 a 100.

The executive committee of the Horticultural Society of Chicago has completed the preliminary schedule of premiums for the chrysanthemum show of 1896 and same will soon be printed and distributed. There will be some very interesting new features.

Mr. W. N. Rudd's new daughter has taken up so much of his time that he has been absent from the last two meetings of the Florist Club. A committee will probably wait on the young lady and endeavor to secure a special permit for the absence from home of her papa on club meeting nights.

Mr. Fred Kanst returned recently from a trip through the east.

Dr. John M. Coulter has resigned the presidency of Lake Forest University, and has accepted an offer of the chair of botany at the University of Chicago.

Mr. T. J. Corbrey has begun suit in the superior court against Otto Mailander of Niles Center for \$15,000 damages. Recently a number of attachment suits were begun against Mr. Corbrey, and he claims that during his absence in California Mr. Mailander circulated stories about him which stirred up creditors to attach his property.

St. Paul.

Trade in general has been excellent. Everything has found a ready market, and February, like its predecessor, has been a busy month. Last week there was a great scarcity of roses and carnations. On several days everything in the city was sold, and several hundred more roses and carnations could have been easily disposed of. Stock as a rule is in excellent condition, and the quality of blooms unsurpassed. Funeral work has created a big demand for Harrisii lilies and other bulbous stock, and the supply has not been sufficient. The demand for Harrisii this year has been unusually large and growers who force it in any quantity are getting good returns from it.

E. T. Lemke recently had a large funeral order requiring several hundred dollars' worth of flowers. L. L. May & Co. have also had a large number of funeral orders lately. During the Lenten season we do not expect as large a trade as during January and February, but each year shows increased trade during Lent.

The Florists' Society met at the Hotel Ryan on Thursday evening, February 13. Mr. A. S. Swanson read an able paper on chrysanthemum culture and chrysanthemum shows, which was afterwards quite thoroughly discussed by those present. A committee of five was appointed to formulate plans for an exhibition another fall. By getting the question agitated at an early date we hope to see a rousing show another fall.

The city greenhouses at Como Park are being rapidly filled with choice bedding plants, and we hope to see the parks dressed gayer than ever when summer comes again. With the limited means at his disposal Supt. Nussbaumer is to be congratulated on the showing made in the past. This year he is propagating a number of aquatics, and expects to have a very fine lily pond. He has quite a large stock of Strobilanthes Dyerianus, and considers it an excellent bedding plant.

H. Schulze on Lafond street has recently added a house 10x50, short-span-to-the-south. This is now filled with spring bedding plants. The coming season he intends erecting another house of the same dimensions. His place, though one of the smallest in the city, is also one of the neatest, and his stock is in good condition. His principal trade is in bedding plants, which he sells on the market.

J. C. Fleischer & Son have four houses devoted to growing roses, carnations, vegetables for the early market and a general line of bedding stock. Mr. Fleischer has been in business here for 25 years, prior to which time he was engaged in the newspaper business. He has grown old and gray in the business, but carries his weight of years more lightly than many a younger man. His talk is full of reminiscences of the past in this city, which he has seen growing from a village of 4,000 to a city of 150,000.

Recent callers: H. A. Johns of Sioux City, Ia., and C. H. Parmelee of the Jno. H. Allan Seed Co., Pictou, Ont.

Chas. Vogt is opening a new store on Wabash street in a most desirable location. He will retain his other store in the city market for the present.

W. R. Roach, representing J. B. Rice & Co., was a recent caller. FELIX.

Rochester, N. Y.

The past week has brought on a decided change in business, and we may say that dull times have set in for our florists. Lent came in, not only with decidedly lower temperature, the thermometer away below zero and very blustering weather, but also with a great falling off in the hitherto fairly brisk trade in flowers. Still, as business during Lent for the past few years has not been strictly dull on an average, a reaction is hoped for within the next few days, and the bad commencement may be wiped out. In one way the slow trade relieved the storemen to some extent of the anxiety which was felt by everyone in procuring a sufficient quantity of flowers for their orders, and now although the supply is still rather short, orders can be executed without much trouble. Flowers, especially the carnations and violets which came in for the past week, are of a much better quality than those we have been getting lately, but more of them might be used if they were offered. The only article which is over-plenty at present is the Holland bulbs, which for a week past have accumulated without much demand.

An enjoyable event took place in the past week, when J. W. Keller was married to Miss Libby Hahn at the bride's home among a profusion of flowers, palms and greenery. Mr. K. is our wholesale florist, and kept the coming event very quiet, so that none of the florists knew the exact date of the wedding, although they were expecting such a thing in the near future. I am authorized by a number of his friends to congratulate him heartily. J. B. K.

Cincinnati, O.

Business the past week has been good all around, several social events having occurred. Among these Mr. B. P. Critchell had the decoration at the Scottish Rite Cathedral in honor of ex Gov. Foraker on February 14. The table decoration consisted of roses, carnations and silk flags. Several loads of decorating plants with hunting and smilax were also used. The whole made a striking effect. This firm had also a large wedding decoration on

February 17. Roses and Kresken carnations were used on this occasion.

The regular monthly meeting of the Cincinnati Florist Society will be held March 14. This will be a special rose meeting and all those having roses to exhibit are requested to send them to E. G. Gillett, 316 Walnut street, who will see that they are staged correctly.

Mr. H. L. Sunderbruch returned from the American Carnation Society meeting at New York. He reports being well pleased with the display and cordially welcomed.

Mr. Ben George of College Hill, has our sympathy in the loss of his child February 24. H. SCHWARZ.

Buffalo.

At the last meeting of the Florists' Club nomination of officers took place. The nominations were as follows: President, E. I. Mepsted; vice-president, S. A. Anderson, Chas. Buechi; secretary, Wm. Legg, renominated; treasurer, W. F. Kasting; financial secretary, H. B. Buddenberg, George Asmus. The election takes place the second week in March, followed by a banquet and general good time.

Our only representative at the Carnation Society's meeting in New York arrived home Wednesday morning.

J. H. Rebstock has obtained a judgment against the United States Express Co. for \$97.45, being the value of flowers which the company failed to deliver at a wedding in Norfolk, Va. P. S.

Syracuse, N. Y.

The great charity ball was the last large social event before Easter. Florists have every reason to be satisfied with their winter trade.

The weather the past week as been unprecedented in the memory of any resident, and it is safe to say that it will be many years before it will be forgotten. For nearly 40 hours the thermometer registered 28 below zero, with a brisk wind and not a flake of snow to cover the greenhouses. So far I have not heard of any serious loss, but should not be surprised if some were caught. Your humble servant was on duty for 43 hours and would have been pleased to have met that weather prophet who was here last fall telling of what a nice open winter we should have. H. Y.

AMONG recent arrivals at New York was Mr. John Speelman of C. J. Speelman & Sons, Sassenheim, Holland, on his annual trip through the United States.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By a competent all round florist and gardener; 16 years' experience; age 31. First-class reference. W. R., care Am. Florist.

SITUATION WANTED—By a first-class grower, to take charge of a place. \$12 to \$15 per week wages. Address A. F., care American Florist Chicago.

SITUATION WANTED—As foreman; a thoroughly practical grower of cut flowers and decorative plants. References. G., care American Florist.

SITUATION WANTED—In a commercial place, by a young man of 34 years experience. State wages with board. F. G. BEHLING, Y. M. C. A., Scranton, Pa.

SITUATION WANTED—As florist and gardener by a married man of small family; good habits; private place preferred; good references. F. B., care American Florist.

SITUATION WANTED—As manager or foreman; a practical grower of cut flowers and decorative plants; references. Address MANAGER, 1019 Vine St., Philadelphia.

SITUATION WANTED—Gardener; English; single; age 26; experienced in general greenhouse work, flower-beds, care of lawns. Good vegetable grower. ROBT. MAIN, 64 North St., Gloversville, N. Y.

SITUATION WANTED—As foreman and grower of roses, carnations, violets, palms, all kinds of florists stock. States preferred. References. GEO. NOBTON, Box 377, Brockville, Ont., Canada.

SITUATION WANTED—As headgardener. First-class ability in all branches of gardening. First-class references. Family of two. Address P. ROBERTSON, care H. Wietor, Hahridge, Chicago.

SITUATION WANTED—By an experienced grower of cut flowers and general stock, as working foreman. Married, age 35. For particulars and references address E. ROBERTSON, Little Silver, N. J.

SITUATION WANTED—As foreman in a commercial place; good cut flower and plant grower. Married. First-class references furnished from present employer. Address with full particulars. C. M., Box 933, Knoxville, Tenn.

SITUATION WANTED—By a young man skilled in growing general greenhouse stock, sober and industrious; 8 years' experience; permanent place preferable to high wages; east preferred. Address WESTERN, care American Florist.

SITUATION WANTED—As foreman, by a hustler, who does not call throwing dollars on the rubbish pile broken pots, or dirty houses, experience. Write to me. 20 years' knowledge. W. A. H., care American Florist, Chicago.

SITUATION WANTED—By a practical all round Scotch florist; long experience in this and other countries. Single. Can furnish the best of references. State wages. Address J. H., No. 13 South Pond St., Newburyport, Mass.

SITUATION WANTED—By young man, aged 21, as assistant at growing roses, with some first-class florist, where there would be a good chance to improve and advance; 7 years' experience. State wages, etc. Address ROSES, care American Florist.

SITUATION WANTED—By a middle aged florist and gardener; no children; temperate; well experienced in every branch of horticulture, especially greenhouses. Good private place preferred. Best references from prominent employers. Address E. M., care American Florist, Chicago.

SITUATION WANTED—By young man, age 30, single; thoroughly experienced in the growing of roses, carnations, chrysanthemums and general greenhouse stock. Good designer and decorator. References. Please state wages. Address J. COOK, 490 Drexel Boulevard Chicago.

SITUATION WANTED—By practical all round florist; German, age 35, single; 14 years in last place, and 18 years' experience in propagating and growing roses, carnations, violets, chrysanthemums, etc., and pot plants. Good references. Address FLORIST, 180 Fo 1 St. East, Detroit, Mich.

SITUATION WANTED—By good competent florist, as working foreman or assistant; commercial or private place. Graduated from a horticultural school in Sweden; 11 years experience; 5 years from one of the leading rose establishments of America. Strictly temperate; energetic; single; age 27. Good references. Address 333 Sayin Hill Ave., Dorchester, Mass.

SITUATION WANTED—By well educated, energetic German florist; 14 years' experience; good manager; first-class bedder, designer and all round grower. Have been employed at some of the best establishments of Germany, France and Switzerland; in this country 6 years; in present place 4 years. First-class references. Address R. W., care American Florist.

WANTED—A young man for general work around greenhouse; must be of good habits. A Christian man will have a good home. Apply to DAWES & WHITTAKER, Rogers Park, Chicago.

WANTED—A good rose grower; one who is capable of taking charge of large commercial place. State where last employed, and wages wanted. Give references. Address ROSE, care E. H. Hunt, 68 Lake St., Chicago.

WANTED—Two men of experience, unmarried, to grow roses and carnations; must have references and not afraid of work; also who want to stay at one place for two or three years. To go to California. Address CALIFORNIA, care American Florist.

FOR SALE—Fremont greenhouse. Business and location good. J. STARKEY, North Bend, Neb.

FOR SALE—Fifteen greenhouses, five acres, dwelling, barns, completely equipped florist's establishment and business for sale; located in the 21st ward, Flatbush, Brooklyn, N. Y. A fine opportunity to obtain an established business. Apply to HENRY W. SHERRILL, 13 Willoughby St., Brooklyn, N. Y.

FOR SALE—22 greenhouses and 5 acres land, about 1 acre under glass, with or without land and in good condition houses filled with stock; will be sold at a bargain if taken at once, as I intend to go out of business. For information address P. J. DEUSTER, 98 Winnemago St., Milwaukee, Wis.

WANTED

For San Francisco, a thoroughly well trained man to take full charge of about 10,000 feet of glass. Must understand culture of cut flowers principally carnations and all bulbous stuff, and possess a good knowledge of greenhouse culture of ferns, palms, camellias, azaleas, etc. Only one not afraid of work, and possessing best of references as to honesty and reliability wanted. Married man preferred. Wages \$5.00 per month, with increase, and a permanent situation to the right man. Address H. H. BERGER & CO., San Francisco, Cal.

FOR SALE.

Established vegetable and flower business; five acres of land, five greenhouses, 7,000 feet of glass; everything complete to carry on the business; a paying business and splendid location. Price \$3,000. Address X. Y., care American Florist.

Passaic, N. J.

At this place Mr. McAllister says the demand for cut flowers this season is rather better than last, the favorite color being pink. At a recent euchre party the favors were Bridesmaid roses for the women and Scott carnations for the men. A favorite combination in cut flowers here is freesia, Scott carnations and mignonette.

Wm. P. Kesteloo reports trade good this season. At his greenhouses at Garfield he has several houses of the Van Leeuwen carnation. The color is very fine and they have flowered well all winter. They grow on fine long stems. Goldfinch also is doing very well here. Mr. Kesteloo has in flower some very fine French stocks, white. His Holland mignonette is very good also.

We also noticed here a very pretty house plant, the Bermuda buttercup oxalis, the flowers of which are a pure bright yellow and very abundant. Some handsome new coleus, raised from imported French seed, by Mr. Kesteloo, is very distinct, the coloring and marking is very different from any of the old varieties and the plants are all strong and healthy.

At their places at Clifton, W. H. and Geo. Young are growing some fine Beauties. One of Mr. W. H. Young's houses, a new one 332 feet long, is in fine condition.

Mr. Geo. Young has two houses afflicted with "black spot" and this is still another proof that good growing cannot prevent this disease. S. M. T.

Tiffin, Ohio.

Mr. L. Ulrich has recently added one more house to his plant, the recent addition being a bulb house and covers 22x50. It may be interesting to state a few particulars regarding this house, as Mr. Ulrich's idea possesses the merit, which will doubtless commend it to many of the craft. According to his idea, to obtain the best results with bulbous stock the bulbs should be grown, or given a chance to grow instead of being forced at a moment's notice, as is generally the case. With this object in view and in order to put his theory to a practical test Mr. Ulrich has built a house especially adapted for the purpose and is quite enthusiastic over the results. The benches are constructed shelf-like, each bench consisting of three parts, each part varying in temperature from the others. A box of bulbs put in the lower part of the bench is in the course of a few days transferred to the middle, then to the upper part, and by the time they are wanted for forcing their stems are fully developed, both in size and in strength.

A sight well worthy of seeing is Mr. Ulrich's house of Asparagus plumosus. They average about 12 feet in height, being remarkably well grown. His carnations too look fine, despite the unfavorable weather of the past two weeks.

Homo.

Scale Insects.

I am making a special study of the scale insects of the greenhouse and garden and should be glad to receive any scale insects from readers of the FLORIST. I will determine them as far as I am able free of charge. E. E. BOGUE.

Columbus, O.

Would Be Preferable.

"Don't you long for the springtime," said the poetic youth, "when two young hearts can wander over the woodlands, picking flowers?" "Yes," replied the ordinary person. "I do." It would be a lot better than wandering around the florists trying to see where you can get the biggest bouquet or \$2.—*Washington Star*.

PROFITABLE SWEET PEAS.

FROM careful personal inspection of all the new and old varieties in the famous pea growing districts in California, and from actual selling qualities shown in the San Francisco Flower Market—the largest in the world for this flower—we find the following seven kinds, for size, stems, prolific habits and other most desirable qualities unequalled. They comprise the leading salable clear colors which are always appreciated. Fill seven vases each with 100 sprays of these, and set them in a row in your window, and you need fear no competition in your trade on this flower.

BLUSHING BEAUTY, clear Daybreak pink
HER MAJESTY, pure solid rose.

@Re Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

S. E. BRIGGS, Pres.; T. W. WOOD, 1st Vice-Pres.; ALEX. ROEDERS, 2nd Vice-Pres.; A. L. DON, 114 Chambers St., New York, Sec'y and Treas. The fourteenth annual meeting will be held at Niagara Falls, N. Y., June 9 to 11, 1896.

"Warranted" Seeds Again.

EDITOR AMERICAN FLORIST: With reference to the correspondence appearing in your paper about "Warranted Seeds" it occurred to us to obtain an outside and legal view of the subject. With the opinion so obtained we fully concur and we beg now to submit it to you.

Anyone selling his seed "warranted" in large letters, and his reservations or modifications of his warranty in small letters, or hidden away in a multitude of words, will find that some day a purchaser who saw the "warranted" and did not see the limitation will receive a large amount of damages "should a mistake occur in selling seeds."

It is but fair, and so far as we know it is the usual custom of seedsmen in the event that seeds sold by them do not germinate or the product is not as it ought to be, to give new seed or refund the price, upon the principle that if the seed sold was good for nothing they ought to receive nothing for it. But it is absurd to call this custom a *warranty*. It is simply an agreement to refund the money if the goods sold are not what they purport to be.

The damage upon a breach of warranty on the sale of seeds is the difference in the net value of the crop raised and the net value of the crop which would have been raised had the seed been what it purported to be.

Trumpeting "warranted" to induce people to purchase, with a limitation absolutely destroying the effect of such a warranty, would be held by court and jury to be misleading and a fraud upon purchasers.

It is much better for all seedsmen to state fairly and clearly the conditions upon which they sell their goods similar to the clause printed in the catalogue of J. M. Thorburn & Co., and upon all packages containing seeds sold by them.

This custom thus becoming universal among seedsmen will avail them against fraud on the part of purchasers, and purchasers cannot complain when they know or ought to know, and have the means of knowing the reasonable conditions upon which seedsmen deal with purchasers.

J. M. THORBURN & CO.

"Seed Control."

Before the Mass. Horticultural Society Saturday, February 8, Gilbert H. Hicks, of the Department of Agriculture of Washington, delivered a lecture on "Seed Control; its Aims, Methods and Benefits." The lecturer first spoke of the importance to the farmer of good seed; that is, seed pure from dirt or weed seeds, etc., true to name, and of good vitality, and gave some of the results of tests of seed. The lowest vitality and purity is found, as a rule, among grass seeds, and the detection of impurities in this class of seeds is the most difficult not only by the purchaser but also by the dealers. As the result of some germination tests made by American experiment stations on twenty-one kinds of grasses, the percentage which vegetated varied from two to twelve, and of eight other kinds not a single seed sprouted.

Perhaps flower seeds are inferior in respect to germinating averages even to

grass seeds. Owing to the methods of culture as well as to their size, vegetable seeds are usually much cleaner than those of grasses and other forage plants. There is a good deal of fraud practised by mixing small gravel and sand with vegetable seeds to increase their weight.

After giving further evidence of the large quantity of poor seed sold, the lecturer said, the important question is, what are we going to do about it? Shall we continue to believe that the evils will regulate themselves in the ordinary course of competition, as the seedsmen would have his customers think? Experience with commercial fertilizers and adulterated food products ought to be sufficient to satisfy the most sanguine farmer or gardener that competition among seedsmen is not going to insure him good seed.

More than a quarter of a century ago these same questions were forced upon the attention of European agriculturists by the results of some tests of commercial seed made by Dr. Nobbe, director of the Experiment Station at Tharand, Saxony. Seed control methods were introduced, and as the result there has been a great improvement in the stock offered for sale. Poor seed is on the European market, but no man there need buy it unless he wants to. At the present time there are over 100 seed control stations in Europe, not a single important country being without one or more. Germany heads the list with 38, Sweden has 16, Austria 14, Belgium 9, Russia 7, and France, England and Scotland one each. Even Japan, Brazil and Java have one or more, the total number outside of the United States being in 1894, 117. In some cases this work is conducted in connection with a regular agricultural experiment station; in many instances seed testing alone is carried on. So far as the lecturer knew there are no laws in Europe compelling seedsmen to furnish good wares; the result is reached through the pressure of public sentiment due to the effect of control stations.

Frequently the work is undertaken in connection with agricultural societies, all of whose members share in the benefits. For example, every agriculturist in the jurisdiction of the Dresden Agricultural Society is authorized to send in to the Experiment Station at Tharand, Saxony, samples of seed bought by him, together with a statement of their origin and cost.

The sample must be taken and sealed before a witness, and must be a fair average of the seed purchased, so that the dealer cannot dispute the result of the test. Of the smaller seeds, as radish, rape, clover, grasses, etc., at least half an ounce must be sent in, and in the case of larger seeds, such as peas, beans, cereals, maize, etc., from a quarter to a half a pound. The results of the test are published in the official journal of the station, which also publishes equitable standards of purity and germination, so that the people may know whether the guarantee of seeds offered to them is of a sufficiently high per cent.

Seed producers or dealers can have the purity and germinative ability of their seeds examined for one or two dollars, according to the size of the seed. Special arrangements are made with parties not members of the Dresden Agricultural Society.

The prices for seed testing vary according to the labor required and the country in which the test is made. A few of the stations are self-supporting, but most of them receive grants from the state to aid in carrying on the work. In many cases so-called "control firms" are regular

patrons of the stations, paying a certain annual amount for having tests made.

To their customers they furnish a guarantee for genuineness, purity and germinating capacity, based upon, but not necessarily equal to, the test made by the station for them—the "preliminary test," as it is called.

Immediately upon receipt of the seed the customer can send a sample to the control station if desired, and have it tested at a reduction of from one-third to two-thirds from the prices charged the dealer, or, in some cases without expense. This is called the "supplementary test."

The firm binds itself in case its seed falls five per cent or more below the germination per cent guaranteed, either to refund the money pro rata or to replace the goods, paying transportation both ways.

In supplementary tests made for members of the East Prussian Agricultural Society, if more than two per cent of foreign matter occurs above the guarantee, or ten dodder seeds per kilogram (about four and a half seeds per pound), the dealer agrees to take back the goods, paying charges both ways, or, at the option of the buyer, to refund from five to ten per cent of the cost for every five to ten seeds of dodder per pound.

Free Seed Distribution by Agricultural Newspapers.

This evil, a more crying one than ever was that of the government seed shop, is still indulged in by several so-called agricultural papers; and the seeds they send out are not novelties, but the regular kinds sold by all seedsmen. Can therefore the bold adv. "SEEDS FREE" used by such publications in their advertisements fail to injure the regular business of the seedsmen? Why should a seedsmen pay full price for advertising to a publication which gives away free seeds to its subscribers? Here is a sample:

SEEDS FREE

ONE CENT for a postal card is all it will cost you to learn how to get 15 packets of Rare, Selected and Tested varieties of seeds from 30 choice novelties, and a year's subscription to the —.

VISITED NEW YORK.—J. C. Robinson, Waterloo, Neb.

DECOU & Co., of St. Paul, are reported to have assigned.

THE catalogue mail trade suffered badly, probably from the cold weather, February 18 to 26.

Large flowering plants all sold.

E. B. JENNINGS, Pansy Grower
Lock Box 254, Southport, Conn.

Morristown, N. J.

Trade in this vicinity has been very good throughout the season, especially during the holidays, when the town was completely cleared of flowers, anything with color selling readily and at good prices. Plant trade was also very good, especially in cyclamens and primroses.

Mrs. E. A. Holton continues the business of her late husband, Thos. T. Holton, whose death was announced in this paper in September last, and has recently had the store and office repainted and decorated in pale blue and gold, which with the plant decoration in the windows makes a very effective show. This lady has secured the order for the church decoration for a large wedding on the 29th inst., the occasion being the marriage of Miss Evans of this town to Mr. Walter S. Cramp of Philadelphia. Mrs. Holton is cutting some extra fine Brides and Bridesmaids, and quantities of violets.

Mrs. Thos. Mitchell has rented her store and greenhouses to Mr. John Grunewald, who reports very fair trade. He has also started mushroom growing, and is very well satisfied with his first crop, which found a ready market here. A. W. H.

Grand Rapids, Mich.

The Florists' Club met February 18, and adopted the premium list prepared by the committee; \$500 are offered in premiums and some changes made, notably collections, single stem plants in separate colors; a limited space for tropical collection and special premiums on collection plants in bloom other than 'mums. Liberal premiums are also offered on amateur specimens and collections, the committee thinking to thereby awaken interest among more of our citizens.

Six of our florists recently visited the establishment of Geo. Hancock & Son at Grand Haven to inspect the new carnation Ivory just set out by this firm. It was seen in fine condition, and appears to be an excellent commercial white. Their cutting bench is a sight, not a single failure in any variety out of perhaps 100,000 cuttings. They mix soft coal screenings with sharp white sand, about equal parts. Scott is seen here in all its glory, and their seedling plants display almost every color of the rainbow except blue; seven distinct yellows were noticed. CREELMAN.

IRON MOUNTAIN, MICH.—Plowman & Armstrong started in business at 603 Flesheim street last November with one three-quarter span house, short-span-to-the-south, using hot water system for heating. They will build two more houses next season. Trade is very good. Not much call for bulb stock. Mercury went to 22° below zero on the 18th, with no bad results.

TREE AND PLANT LABELS. MAILING BOXES.
WILLIAMS & SONS CO.,
BATAVIA, Kane Co., ILL.

New Single Violet Luxonne.

This variety is of French origin and was introduced into this country some four years ago by Mr. Francois Supiot, the Violet expert of Philadelphia, otherwise known as the "Violet King." It has, as Mr. Supiot claims, become thoroughly acclimated, and is without doubt, the most profitable single Violet grown. It is of the same size as the California, but appears nearly double its size, as all the petals open out flat, and has the advantage of flowering continuously from early in September until April, and does not come in crops like the California. It is of a beautiful rich, but soft violet purple color, with strong stout stems from 9 to 12 inches long, and very fragrant.

Shown in competition with well grown flowers of the California at the New York Flower Show last fall, it was awarded the *First Prize*.

We can fully endorse Mr. Supiot's description of the above and also his claims that it supersedes all other varieties now on the market. **\$2.00 per dozen; \$15.00 per 100.**

New Red Violet, Admiral Avellan.

Another French variety with distinct reddish purple flowers, entirely distinct from anything yet introduced. **\$2.50 per dozen; \$20.00 per 100.**

We have been appointed **SOLE AGENTS** by Mr. Supiot for the distribution of his stock, and are now booking orders for delivery **EARLY IN MARCH** for well established plants from 2 1-4 inch pots.

Nashville, Tenn.

Currey & Co. succeeds G. W. Currey & Co., Mr. G. R. Currey retiring.

Currey & Co. have rebuilt three houses each 20x75 and are now building four houses each 20x100.

The Mount Olivet cemetery has built a rose house 20x120.

Trade has been very much depressed for a year and more, roses and violets holding their own best.

This is Centennial year in Tennessee and is to be celebrated with a grand exposition, opening September 1st and closing December 31. A grand feature is to be the floral display, and special efforts are being made to have a chrysanthemum show that will equal if not excel anything of the sort ever held in this country. A great many of our most prominent northern florists have promised to be on hand as the premium list is to be a most tempting one.

An interesting case was decided here in Supreme Court on January 10. G. W. Currey and Hugh Seals entered into contract April 1, 1895 for three years. Seals to receive \$100 per month as foreman at their greenhouse plant. Seals quit work November 1, 1895, the firm being indebted to him \$233, which they declined to pay on account of breach of contract. Seals sues in magistrates court and gets judgment. The matter being appealed to next higher court is decided in favor of G. W. Currey & Co. Seals appealed to Supreme Court which sustained the decision of the Circuit Court and decided also in favor of Currey & Co.

Joy & Son are now bringing in fine carnations and violets.

Currey & Co. are cutting magnificent roses, particularly Beauties and Bridesmaids, and their Perles are the best ever seen in this market. R. B. C.

Shamokin, Pa.

Shamokin is to have a first-class flower store. Geo. W. Parmley, the florist, has secured a good location at the corner of Independence and Orange streets, in the center of the city. The building is under way and will be two stories high with a good cellar. The first floor will have a frontage of fifty feet with four large plate glass windows and two entrances, and all in one room. The second floor will be of the same size also in one room and well lighted and ventilated with large windows and sky lights, for the display of specimen plants; with hot water for heat and electricity for light. Mr. Parmley expects to make "ends meet" and lap over by watching the markets for anything of merit that will help to make up a good stock and good profits.

The store will be conducted in connection with the present greenhouses which are only two squares distant, and will be used more for stock than for growing. The store will be opened time for spring sales, and it is hoped that deserved success will attend the effort.

FOR SALE.

Daybreak, Helen Keller, Lady Emma, Thos. Cartledge, Mrs. Fisher, Tidal Wave CARNATIONS out of flats.

ALBERT M. HERR, LANCASTER, PA.

Mention American Florist.

Crimson Sport Carnation.

This new carnation originated with us six years ago and has been thoroughly tried before offering it to the trade. Crimson Sport, as its name will imply, is a sport from Unique, which was a sport from Lydia. Crimson Sport has the strong, healthy growth of its parent, very large crimson flowers, free from rust and disease, very prolific, long, stiff stems, perfectly healthy growth, a good shipper, a good keeper and all in all the best crimson carnation now in cultivation. We say this after growing it several years and comparing it with all the recent introductions and old varieties.

Having plenty of stock our cuttings will be taken from perfectly healthy plants that have not been forced or propagated to death, as is often the case.

Call and see it growing or send for carnation circular of this and other varieties.

ROOTED CUTTINGS, \$1.50 per dozen; \$10.00 per 100; \$60.00 per 1000.

J. L. DILLON, Bloomsburg, Pa.

No Rust
Gentlemen,
We take pleasure in quoting as our column indicates and should like to train your attention particularly to Cardinal Eldorado which we believe is destined to take the lead in place among yellows as it has shown equally well on each side in and in the market bringing double the price of ordinary varieties also Perquhar violet which is making quite a stir in New England and of which we have very bright clear stock.
Yours truly
Edw. Swayne

A. DONAGHUE, Omaha, Neb.

We have reached the top notch CARNATIONS

DELLA FOX and ANNIE H. LONSDALE

were exhibited at the American Carnation Society at New York.

DELLA FOX was conceded by carnation specialists to be the best vase of light pink ever staged at any exhibition. The adoration of the society ladies of New York was very expressive, and very many blooms could have been sold at the exhibition. Having been certificated in 1895 at Boston, it was not eligible for competition at New York, and not being disseminated, it could not enter in competition with varieties that had been disseminated. But lookout for it in 1897. As a grower you cannot afford to miss it.

ORDER AT ONCE.

Ready; Second Shipment March 20th.

COME AND SEE THEM.

One Hundred Dollars in Cash Premiums will be offered for the best 50 blooms of DELLA FOX in the fall of 1896—divided in the four largest cities in the U. S.

ROOTED CUTTINGS. Price: Less than 100, \$12.00 per 100. 100 @ \$10.00 per 100. 1000 @ \$75.00 per 1000. READY MARCH 1st, 1896. No orders will be booked unless cash accompanies order or satisfactory reference given. Sample cut blooms will be sent to florists' clubs only on application.

ALWAYS mention the AMERICAN FLORIST when writing to advertisers.

Omaha, Neb.

Business has been very satisfactory for the past two weeks, the demand being equal to the supply in almost everything. The weather has been warm and cloudy, and the cut limited. Roses are bringing from \$4 to \$7 per 100, and in quality the La France takes the lead. Brides and Bridesmaids are small and have weak stems. Carnations bring \$2, and the Day-break is most in demand. Romans, paper white and freesia are about the only bulbous stock being sold. No demand for tulips. What Harrisii there are sell rapidly and at a good price.

J. F. Wilcox of Council Bluffs, Ia., made a flying trip to New York City the latter part of January, bringing back with him a new foreman of his plant department in the person of J. M. Jakobsen, late of John N. May's establishment at Summit, N. J.

Mr. Wilcox has produced a new rose which he calls the climbing Bridesmaid, and those who have seen it praise it highly. It is a rapid climber, and so far has produced excellent blooms, being large and of good color. Mr. Wilcox would be pleased to communicate with anyone who has produced anything similar.

Mr. W. has three houses devoted to violets, which are producing some of the finest blooms ever seen in this section, and they are selling well.

J. W. and E. E. Arnold have moved their down-town store from 121 No. 15th street to 207 S. 16th street, opposite the Y. M. C. A., and more centrally located.

Lewis Henderson opened a branch store at 1514 Douglass street, but it only required a short time to convince Mr. Henderson that he had got "beyond his depth." Hereafter he will be found at his former location, 222 So. 16th street, with a front window.

Sam'l Falconer has put in a telephone and will content himself with his greenhouse trade for this spring at least.

G. R. H.

Helena, Mont.

Mrs. Wells had a small fire January 14, loss about \$150. The floor of the house over the boilers was half burned away.

H. Winters' place is in fine condition, and he reports trade as excellent.

There has been some sharp cutting of prices by local florists, and carnations have been retailed as low as 25 cents a dozen, good fancy roses \$2 a dozen, and Romans 50 cents a dozen. W.

NEWARK, N. J.—Heyman's greenhouses, concerning which legal proceedings have been going on for over four years, have been sold to the proprietors of the Hotel Breslin at Mt. Arlington, to which place they have been removed.

PAWTUCKET, R. I.—The Rhode Island Greenhouses on Pawtucket avenue have been leased by S. J. Reuter of Westerley, who has placed Mr. A. Millar, formerly of Manchester, N. H., in charge as foreman.

GREEN AS GRASS.
Verbenas rooted cutting in eight separate colors.
Per 1000 \$7.50, per 100 80c.

6,000 BEGONIA NIVEA,

AT REDUCED PRICES.

The New Everblooming Apple Blossom Begonia. We have a large stock of this grand winter blooming and summer bedding plant, it being covered with elegant panicles the whole year round, making it a valuable market plant. In color it is of a delicate pink when in bud, expanding through lighter shades to snowy whiteness when in full flower, giving it an apple-blossom appearance, that is unique, and what the ladies call "just lovely."

In order to make room, and to place in reach of all, we offer 6,000 plants only at reduced rates. If ordered before March 1st, 1896, after which date, prices will be advanced. It is a most vigorous grower, propagates easily, and has come to stay. The plants are well branched, well established and first-class in all respects, and sure to give satisfaction. Up to date florists should secure some of this stock for their floral work.

We guarantee safe arrival in good condition, and extras added to all orders of one dollar and upwards by express. Cash with the order. 50 plants at 100 rates.

It is the **EARLIEST LARGE CHRYSANTHEMUM GROWN.** Has been cut as early as Oct. 15th; flowers measuring 11 inches in diameter. A good strong healthy grower, stiff stem, 4 to 5 feet high, with clean foliage.

Will be sent out March 15th, 1896. Price to the trade,
\$5.00 per dozen; \$35.00 per 100; \$200.00 per 1000.

JOSEPH HEACOCK, Wyncote, Pa.

And for sale by Henry A. Dreer, 714 Chestnut Street, Philadelphia; Henry F. Michell, 1018 Market Street, Philadelphia; Geo. C. Watson, 43 N. 10th Street, Philadelphia; E. G. Hill & Co., Richmond, Ind.; Nathan Smith & Son, Adrian, Mich.; The Cottage Gardens, Queens, L. I., N. Y.; Henry G. Standen, Haverford, Pa.; A. Blauc, Philadelphia, Pa.; Robt. Craig, 49th and Market Sts., Phila.; J. C. Vaughan, 81 Randolph St., Chicago, Ill.; John N. May, Summit, N. J. Mention Am. Florist.

OUR NEW CHRYSANTHEMUMS FOR 1896

Have been fully indorsed by the
Chrysanthemum Society
of America.

Descriptions and prices free on application.
NATHAN SMITH & SON,
Adrian, Mich.
When writing mention the AMERICAN FLORIST.

NEW SEEDLING CHRYSANTHEMUM MRS. ADELAIDE WHITE.

We have grown this for three years, and recommend it for exhibition, as specimen plant, or cut bloom. The *Florists' Exchange*, Dec. 7, '95, page 1190, said of it, "The flower is of the hairy Japanese type, the color is entirely different from anything we have seen in that class. The lower florets were deeply suffused with pink, the upper ones being a clear white color; the combination making a pleasing effect."

READY MARCH 15th, 60c. each; \$6.00 per doz.
Orders booked in rotation.
W. MENEILLY & SON,
1218 James Street, SYRACUSE, N. Y.

LATANIA BORBONICA.

10,000 very fine plants from 2½-inch pots, \$3.50 per 100, or \$28.00 per 1000. Just the thing to grow on for your next fall and winter's trade. On receipt of price we will deliver these free of charge to any point in the United States.

WHOLESALE LIST ON APPLICATION.

THE AMERICAN EXOTIC NURSERIES, Seven Oaks, Fla.

Mention the American Florist when writing to advertisers on this page.

Hackensack, N. J.

Lehnig & Winnifield have a fine lot of pot grown carnations ready for spring sales. The variety used for this purpose is 'resident Garfield; it is a very hardy carnation, these plants having been wintered until a few weeks ago in cold frames, with no other covering than that the lights afford. The plants are in fine healthy condition, and are of uniform size and good shape. This lot of 4,000 plants will be a fine sight when in bloom, and they promise lot of bloom. This firm is sending in some of the finest carnations to the N. Y. Cut Flower Co. They have found this season Wm. Scott the best paying variety, and they have cut some remarkably fine flowers. The system of overhead heating is used exclusively at this place, and seems to be just the thing for carnations and cyclamens.

The cyclamens for next season are looking very well. The seed was sown in August, and now the plants have just been transplanted for the second time, 14,000 of them. If the demand is as good next year as it has been this there will be none too many of them. Lehnig & Winnifield expect to extend their glass this year and build some of the most improved houses for the culture of carnations.

S. M. T.

Germantown, Pa.

The regular monthly meeting of the Germantown Horticultural Society was held in Association Hall, February 10, President Jones in the chair.

An excellent display of blooming orchids and azaleas was made and some seedling carnations blooms were shown, to give point to the discussion. After business had been transacted Mr. Young opened the discussion on carnations, taking the rapid growth of hybridizing as his theme. He attached much importance to each grower making some effort to improve his stock by cross fertilization, giving a brief history of what had been done in the past and urging what might be done in the future by intelligent effort.

Mr. Woltemate came next. He attached much importance to a thorough knowledge of botany, a study much neglected by florists and gardeners.

Mr. Redles then gave a brief illustrated lecture on hybridization which was followed by a general discussion on the running out of varieties and its cause, closing one of the most interesting and best attended meetings held this season.

J. W.

Erie, Pa.

Mr. Henry Niemeyer has a sport from Daybreak carnation that strongly attracted me. It is a beautiful red tinted, long-stemmed flower, and it struck me as a promising novelty.

Mr. N. thinks much of this sport, and the fact that it has stood the test of three years predisposes him to the belief in its intrinsic value as a cut flower. HOMO.

DOUGLSTON, N. Y.—Fritz Berkahn has taken the Albert Benz place recently vacated by Ellebrecht Bros., and will endeavor to restore it to its old time prosperous condition.

News Notes.

JEFFERSON, N. Y.—Mann & Rider is the name of a new florist firm in this place.

NEWARK, N. J.—During the storm of February 6 the greenhouses of A. C. Schroeter were damaged to the extent of \$1,000.

NYACK, N. Y.—The greenhouses of Thomas Lynch were flooded with water during the recent storm, and considerable damage was done.

HAVERHILL, MASS.—At the annual meeting of the Haverhill Horticultural Society on February 10 officers were elected as follows: President, J. M. Davis; vice-presidents, W. Hoyt and T. E. St. John; secretary, Jas. How; treasurer, W. B. Taylor; librarian, Geo. H. Hill.

CLEVELAND, O.—John Smith has erected two more houses 20x65, having a glass surface of 3,000 square feet. These give him a total of 8,000 square feet. One of the new houses is planted with roses, and the other with carnations and lilies. The latter will be also planted with roses the coming season.

MILWAUKEE.—A vase of carnations on exhibition here recently attracted some attention, and the comments made are encouraging to the grower, Mr. Lewis Turner of Kenosha, Wis. The color is precisely like the Bridesmaid rose, flowers 3 inches in diameter, good stout stems, the odor sweet, but not strong, the flower shaped like Rose Queen.

HOLYOKE, MASS.—The annual meeting of the Horticultural Society was held on the evening of February 7. Officers were elected as follows: President, Dr. E. A. Reed; vice-presidents, Mrs. C. W. Ranlet and C. A. Corser; secretary, G. R. Hicks; treasurer, C. E. Mackintosh. Rev. Mr. Hutchins of Indian Orchard delivered an address on sweet pea culture.

NEWPORT, R. I.—At the monthly meeting of the Newport Horticultural Society on February 12 a debate took place on the question "Are the exhibitions of the Newport Horticultural Society educational in their influence?" The question was decided in the affirmative. A certificate of merit was awarded to carnation Della Fox, which was on exhibition.

BABYLON, N. Y.—E. B. Sutton is growing some very fine carnations. Daybreak succeeds remarkably here, and the blooms, which are sent to John I. Ravnor, are among the best being sent to New York. The soil is light and sandy, and seems particularly adapted to Daybreak. In roses Perle des Jardins is making an equally favorably record as to quality and productiveness. Wm. Wincott has charge of the houses and Mr. Sutton does the honors of the establishment with a liberality that is unbounded.

Jones, McDuffee & Stratton, Plant Pots and Pedestals

PRESIDENT SCOTT is getting along finely,
and there is a good prospect of his being
able to use his limb next month.

IF YOU have anything to sell to the
trade a strong adv. in our special spring
number, to be issued March 21, will be
the best investment you can possibly
make. Extra value but no extra charge.

HOLBROOK, MASS.—The Samuel Baker
place has been sold to Henry Lively of
Dorchester, who will proceed to erect an
extensive greenhouse establishment.

Herbaceous Plant Notes.

The often repeated objection to the per-
manent planting of beds and borders with
hardy herbaceous plants is that these
plants after flowering will present an un-
tidy and unattractive appearance for the
rest of the season, but where a judicious
selection has been made at planting time
this objection may easily be overcome or
avoided in several ways. In going over
a border of herbaceous plants in the
spring we may find many mistakes made
in planting as to the different heights, and
also in the colors of adjoining plants or
groups of plants not harmonizing. Of
course it is variety that we wanted when
planting the borders, but considerable ex-
perience and a full knowledge of the habit
of the numerous species is necessary to
correctly plant such a border. Anyone
who undertakes such a task without this
thorough knowledge of the material will
usually make a failure of it in planting
either too close and thickly, or indiscrim-
inately placing different unsuitable heights
adjoining each other. Such mistakes are
easily altered in spring and should be
done as soon as the ground is open and
free from frost. In planting it is always
well to leave vacant spaces here and there
in the border, not only for the spreading
of the permanent herbaceous plants, but
also for the accommodation of summer
flowering or bedding plants and annuals.
By introducing such softer and free
blooming plants as Phlox Drummondii,
petunias, verbenas, asters, scabiosas,
Marguerite carnations, gomphrenas, zin-
nias, salpiglossis, mirabilis, calendula and
marigolds, etc., into such vacant spaces,
the border may be made to look attract-
ive in times when some of the permanent
plants are past their blooming.

In many private places this style of
planting has been adopted and is consid-
ered a complete success. An herbaceous
border is not expected by anyone to pre-
sent an even uninterrupted surface like a
designed flower bed, in fact the beauty of
it is in the variation of heights and in the
difference of the habits and foliage of the
various plants employed. I always ad-
vocated the planting of a dozen or more
plants of the same species together in a
patch, allowing them room enough to
grow and spread out, and adjoining this
patch to plant some other species which
will bloom at another season, or if their
flowering season should be the same,
then be very careful and particular that
both colors harmonize well together.
Now, such taller plants as delphinium,
some of the lychnis, the stronger growers
of campanulas, etc., which after flower-
ing become unsightly and have to be cut
down, may be planted among lower and
compact growing plants which would
cover the otherwise bare ground, and
where the taller plants are allowed ample
space from the beginning these dwarfier
plants will have light and room enough

to do well. The evergreen candytuft,
Daphn? Cneorum, dwarf veronicas, the
beautiful Campanula carpathica, thymus,
dwarf creeping phloxes, or if nothing bet-
ter is at hand the common Vinca minor
may be employed for this purpose. We
should endeavor to have the ground in
these borders always covered by some
growth, so where we have a patch of nar-
cissus or other bulbs planted which lose
their foliage after flowering and would
leave an unsightly bare spot in the bor-
der, this space should either be perma-
nently planted over with some low plant,
as mentioned above, or else filled with
soft bedding plants or annuals, and this
should be done as soon as the weather
permits in spring. If the idea prevails
that a herbaceous border is flowerless
during a considerable part of the season
it is quite erroneous, for in a well arranged
border of only ordinary dimensions we
should be able to gather flowers every
day from the time the snow leaves the
ground until late fall.

In early spring, as soon as the snow
disappears, the bulbous stuff, such as
snowdrops, scillas, etc., arabis, hepaticas,
violets and many more, will appear, fol-
lowed closely in April by the primulas in
variety, iberis, adonis, several anemones,
omphalodes, doronicum and a host of
other things, in May the bulk of the Hol-
land bulbs come in, trolilus, corydalis,
A'ysum saxatile, some of the iris, the
dwarf phloxes and others will be in
bloom. In June, July and August there
cannot possibly be a scarcity of flowers
in great variety on the border, for it
would take a good sized catalogue to
enumerate all the species and varieties
blooming at that time. September will
bring on the early fall flowering species,
some of the heleniums, Senecio pulcher,
anemones, rudbeckias, achilleas, many of
the asters and helianthus are only a few
of the many useful September flowers. In
October the later flowering asters, stok-
sia, Plumbago Larpentæ, Pyrethrum
uliginosum, gaillardias, anthemis, the
holtonias and others will last well into
November if the weather is not altogether
too severe. Even in midwinter we are
enabled to gather a few flowers from the
border. On January 1 I picked a good
sized bunch of perfect Christmas roses,
Helleborus niger, from our unprotected
border. There is such a large variety of
stock to select from, every shade and
color being represented, many of the
species continuing to bloom for several
months, and it seems to be easy enough
to make a selection, still a thorough
knowledge of the plants and their habits,
the time of flowering, their respective
height, etc., is surely necessary if the best
results are expected in a border planted
for effect. In case we should only want
them for cut flowers or commercial pur-
poses, planting in rows or beds, nursery
fashion, is perhaps the better way to

grow them, for in such case we are not planting to produce a continuous show, yet every florist if he grows hardy plants at all may find it profitable in the end to devote a little time and attention to a border or a few beds near or around his houses, to show his customers and visitors what can be done with hardy perennials.

Pretty permanent flower beds may be planted entirely with these plants or in combination with bulbs. We planted a bed of such a year or two ago in a private garden. This bed had been planted to single daffodils in the fall, and to make it permanent we pretty nearly covered over the whole with pink dwarf phlox, inserting here and there a plant of blue and white *Campanula persicifolia* and also *Anemone japonica*. The first to bloom in early spring was the phlox, these were hardly over when the narcissus pushed their flower buds over the mossy surface, then the campanulas came and lasted until the anemones opened out their flowers which continued to bloom until frost. Such a bed will give far better satisfaction to a majority of planters than an ordinary flower bed of bedding or foliage plants, which only look well from the middle or end of June to the latter part of September, while the herbaceous bed is well supplied with bloom from early spring until late in October or even November, and has the additional charm of presenting an entirely different aspect every month or two. Many other plants may be combined in a bed of this kind with similar or even better effect, and perhaps I shall give a few suggestions of such combinations, according to my ideas, some time or another before planting time.

J. B. KELLER.

Rochester, N. Y.

Carnation Rust.

Never having had the "rust" on my place, and considering it catching, like small-pox, I have always been very careful not to introduce it by buying of growers who did not advertise clean stock. I am in receipt of a letter from a grower that puts a new face on the catching and trouble of having the rust in one's place, and I would like very much to have the ideas of those who have written and labored to exterminate the so-called pest. To use his words, "Rust is so universal that we seldom think of the matter unless asked." Again, "This rust matter has been exaggerated so much there is no wonder that people fear it who do not have it; I did myself until I found out by experience that it amounted to very little after all." Now from this standpoint, why use anything to kill it? Why trouble to write about it? And why does Mr. E. G. Hill use his arsenical preparation?

From what I read and am told by growers who have it, I would consider it a great damage to the plants, and a house badly affected had better be thrown out, and cleaned and fumigated. I hope I will hear from others who can speak from experience, for if harmless there has been lots of time wasted in writing up the many cures for it.

B.

In giving my opinion on the above com-

munication I will say that I can not speak from experience, but have watched this disease from its first appearance. This inquiry is rather pertinent in the face of these comments made on this disease. This rust matter is treated by many as a chestnut, is taken in too light a manner, as an evil we have to contend with, and neglect takes place where watchfulness should be observed. Such a disposition must have caused to make this comment: "Rust is so universal that we seldom think of the matter unless asked." This may seem a careless remark, but it is very untimely and does not reflect any credit on the commentator. Then again when he says "This rust matter has been exaggerated" I concur to some extent, for everything is liable to get exaggerated, good and bad, appreciation and fear. Fear often paints the most exaggerated pictures. But when he says that he "found by experience that it amounted to very little after all" it is a bad exaggeration in his endeavor to diminish the effects and appearance of this evil in the eyes of the unwary and careless.

To look this rust matter square in the face, it is no little thing to contend with. True, I have seen houses with rust infested plants that apparently did not seem much the worse; it seemed not to impair their blooming. These eruptions on the otherwise healthy leaves and stems, resembling sores, are very repulsive. The plants show a great resistance when otherwise healthy, but can they hold out in their resistance? The total destruction at other places does not confirm this idea.

Dr. Arthur of the Purdue Experimental Station, told me that he tried over and over again to grow rust on plants in their greenhouse, but was unable to do so, and attributes this to their location and dryness of the air in this locality. Now this explains to some extent the freedom or virulence in different localities, where not so much care and watchfulness is observed to ward off this pest. We must not exaggerate, but we can not take it too lightly either. With the culture of any kind of plants taken from their primitive wild state diseases will follow. Each variety has its own peculiar enemies, coming to better notice as we learn their nature more and more; and again disease may be the result of culture, for we do not know their nature fully enough. Among the many diseases we find in carnation culture rust is one of the worst. I said once before if the malignity of this disease had been better understood at the time of its appearance many a grower would have been more careful, and many a one would have hesitated to send out infected stock and helped to spread this disease. As it is now it is spread widely, but hardly universally, and the one who takes it light and says that it amounts to very little after all, and induces others to lag in their watchfulness, commits a wrong. I believe I only express the sentiment of all carnation growers, those who make light of this disease included, that the extermination of the rust would be the greatest blessing carnation culture could receive.

FRED. DORNER.

Arsenical Solution for Rust.

In reply to your subscriber's inquiry we will say that the simplest and safest way to use the arsenic cure for rust is to buy "Fowler's solution" and use a one-ounce bottle to 8 gallons of water, and with this syringe the plants so as to wet the foliage thoroughly. It is not a preventive apparently, as the arsenic seems only able to kill the rust after the rust has broken

through the skin of the grass; it kills the diseased leaf outright, and then this dead foliage should be gathered and destroyed. We think that infected plants should be syringed about once a week; three applications cleared up some of our worst cases.

We were sorry that we did not discover the efficiency of the solution earlier in the season, for owing to the unusually long continued dark weather, unbroken by even occasional bright days, we could not apply it as often as it should have been. We believe that by beginning the treatment promptly with young stock this spring it may be kept entirely out of the houses another year.

In using the druggist's prescription—"arsenic acid C. P. 616 grains, bromide of potash 1236 grains, water 4 ounces; heat to make a solution"—great care must be taken not to inhale the vapor while mixing; for this reason the Fowler's Solution is the safest, and it must be used with the greatest care by the person in charge, and the solution should be kept under lock and key to prevent accidents.

E. G. HILL & Co.

Bacteria in Carnations.

"A Constant Reader" asks what is the cause of bacteria in carnations.

The Purdue Experimental Station at Lafayette, Ind., will issue an illustrated bulletin on bacterial diseases, prepared by Dr. Arthur. This gentleman is authority in this matter, and as this bulletin will be sent to all who will apply for it free, I would kindly refer "Constant Reader" to that paper. If not ready now it will be so in a short time. The carnation growers are much indebted to Dr. Arthur for his zealous efforts to help them in their vocation in the abatement of diseases peculiar to carnations.

FRED. DORNER.

Rose Troubles.

Allow me to state through your columns our troubles with our roses. Plants were set in solid bed last June and made a fair growth during the summer and fall months. In the late fall the plants in one end of the bed began to wilt and die. On examination we found that grub-worms were the cause; we succeeded after awhile in killing most of them but they succeeded first in killing many of the plants.

After replanting several times we finally got a fair stand of growing plants that did well for a time, when they began to show signs of disease, turn yellow, shed their leaves and die. On examination we found the soil perfectly alive with a small worm, very small indeed, resembling somewhat an angle worm only about an inch in length, one end (head I guess), nearly white. What is it? Was it those that killed the roses? Guess so, as after saturating the bed twice with strong lime water the plants began to improve and we find no more worms.

J. W. M.

Kansas.

I do not know of any worm that answers to the above description. My

AQUATICS IN UNION PARK. CHICAGO, LAST SUMMER

first thought was that it was possibly the centipede, but presume that such is not the case. It may be that this particular worm is indigenous to Kansas, if so we hope it may always be confined to that region. It is fortunate that something as simple and harmless as lime water will completely destroy them.

ROBT. SIMPSON.

Decorative Plants.

With the approach of spring active growth will re-commence with the many plants that are included in the above heading, and with this renewed activity there are many operations to be remembered by the grower who wishes to keep his stock up with the times. Propagation, re-potting, cleansing and re-arrangement are prominent in the work of the season, the latter item, that of arrangement, being one of considerable importance both to wholesale and retail dealers. The propagation of many plants will be found easier to accomplish during the next three months than at any other season, and it is therefore best to begin this work at once.

Crotons having attained much greater popularity during the past three or four years, are deserving of remembrance now, and cuttings of moderately firm wood will root readily at this season, providing they are given a rather close atmosphere and some bottom heat. The cuttings in question can be rooted in a sand bed in a warm propagating house, but I prefer the method of placing them either singly in 2-inch pots filled with cocoa-fibre or light sandy soil, or several cuttings in a 4 or 5-inch pot, the pots to be plunged in a propagating frame. By this plan the

cuttings are much more under control, and a very small percentage will be lost.

It will of course be remembered that in order to grow on the young crotons rapidly for spring sales, they should be kept up to 70° at night, with a moist atmosphere and plenty of sunlight, these conditions being modified somewhat for a short time before the plants are offered for sale, else they would be too tender to stand much exposure.

Acalyphas and sanchezias are also included in the available stock for spring sales and summer bedding, and these will flourish under very similar conditions to those indicated for crotons, though after acalyphas are well established they may be grown in a slightly lower temperature, in fact with the same treatment that coleus enjoy. *Acalypha musaica*, *A. tricolor* and *A. marginata* are probably the most useful species, their rich coloring and luxurious growth making them highly attractive for large beds. Of the sanchezias, *S. nobilis* var. and *S. glaucophylla* are the best, both being strong growers and producing large and striking leaves under liberal conditions of soil and moisture. Cuttings of young growth root in a very short time, and usually require 3-inch pots at once, for they make roots quickly and do not like to be pot bound.

The ever-popular *aspidistra* may also be propagated to advantage at this season, not only the rhizomes with leaves attached being available by means of division, but also the rhizomes or underground stems without leaves can be put to good use in this way, it being only necessary to cut them up into lengths of about one inch, then plant the cuttings in pans or boxes of sand or sandy soil, the cuttings to be covered to a depth of

about an inch, and place in a warm house until the first leaf develops, when they may be potted off singly into small pots, and grown into useful little plants for the following year's crop.

Some of the aralias are also valuable either as house plants or for bedding out, one of the best being that known commercially as *Aralia Sieboldii*, though more properly named *Fatsia japonica*. Both the green and the two variegated forms of this plant are first-rate subjects for house culture, the green one, when grown cool, being about as hardy and dust-proof as an *aspidistra*. *Fatsia papyrifera* (or *Aralia papyrifera*) is somewhat similar to the above in habit, though not quite so tough, and like it may be readily propagated by means of seeds or root-cuttings, the latter being an easy method where the stock plants are not old enough to produce seeds. *Aralia Veitchii* and its narrow leaved form known as *A. gracillima* are among the most beautiful foliage plants to use in a small state in table ferneries, window boxes and outdoor vases, but unfortunately they are somewhat difficult to increase except by means of grafting on *Aralia reticulata* or *A. Guilfoylei*, and when grafting is mentioned it usually brands the plant in question as being too slow or too delicate for the average grower to handle to advantage. *Aralia Veitchii* is not, however, so delicate as it appears, unless grown in a very high temperature, as I have proved by being able to use the same specimens for two or more seasons in refilling vases for outdoor decoration.

Pandanus Veitchii and *ficus* must not be forgotten in the spring propagating, for while cuttings of these plants may be rooted at any season, yet they root more

promptly at this time than at any other, and also with a less percentage of loss.

W. H. TAPLIN

Dahlias.

The dahlia promises to come into prominence again. The societies and the trade mean to see what can be done towards filling in the late summer and early autumn with the fine old flower, and why not? There are portions of this country at any rate where it does very well indeed, and it is also very likely that American florists may find a way to make it a companion for the chrysanthemum, and so help out and add interest to their fall shows. There are often means at hand to do this. Most florists have a stack of spare sash which are not in use very much before chrysanthemum time, and to protect dahlias with them would be easy. A scantling frame would be so easy to build that no one needs to be told how. It is only necessary to remember at planting time that the plants are to be disposed with protection in view. Every florist knows how to propagate and care for a dahlia surely. Everyone does not know the history and climate of the plant so well perhaps, at any rate I have never met with a comprehensive account of the Central American climates, and analogy is the best I can offer.

The dahlia has four, perhaps five, good species. They are all Mexican and Central American. Three of these are grown at Kew outdoors—the barren-rayed *D. coccinea*, the fertile rayed *D. variabilis* and *D. scapigera*. From these single species the great host of garden forms have been derived.

The Marchioness of Bute introduced dahlias into England by way of Spain in 1789. These early plants were lost, however, probably because the gardeners had no idea of their requirements. Seeds were again obtained by Lady Holland in 1804, yet they attracted but little attention until they began to produce double varieties from English seeds in the years from 1814 to 1834 and onwards. From the advent of the first double flower to this day their position has been secure in every British garden of any pretension.

The comparatively cool climate of Britain is admirably adapted to the dahlia, which seems to point to its being a mountain plant, and further on we will find that it naturalizes in such regions. In the south of England the tubers will occasionally live in the ground through the winter, but no practical advantage is gained from that fact. Their climate does, however, admit of the early flowers ripening seed, and that is a fact of real practical importance in the improvement and development of the flower, for to it we owe the greater number of our best varieties. They store the seed dry, sow it in February or March, plant out in May, and make their selections the same season. They generally show their characters within a year. It is always well to strike a few tops of a fine new variety, for there is a possibility of the tubers being lost, and it is better to have two strings to the bow.

In some portions of the mountains of India the dahlia has run wild, in common with other Central American plants. It is always single in the wild state, but it varies considerably in color—yet there are no scarlets—but yellow in two or three shades, and half a dozen shades of crimson and maroon. The double varieties deteriorate in the gardens and cannot be kept up to the standard after ripening a crop or two of seeds. They seem to devote their chief energies to the

seed-bearing business, and any such matter as the multiplication of ray flowers is neglected by them. There may be some among you who will like to know just what kind of a climate the dahlia feels so much at home in, the soil temperature is never below 45° where the seed vegetates, and ranges from that to about 70° above that of the air. The minimum temperature ranges from 42° in January to 54° in April and May, which are the warmest months. The maximum ranges from 60° in December to 68° in April and May. The four months of the year from December to March inclusive have about one inch of rain each. May and June have two or three inches each. The months from July to October have seven to nine inches each. November seldom has any. Such rest from growth as the plants get is during the comparatively dry winter months. This rest, however, is not nearly as radical as we make it, and it occurs to me that the chief seed bearing and ripening is done during the period of partial stagnation. From this it would seem that there need be no great difficulty in lifting and humoring dwarf dahlias to flower as pot plants for the November shows. *D. imperialis* is a kind that grows very large, sometimes ten or more feet high. It has bell shaped white flowers with a purple spot at the base of the florets.

Our hot summers and often very dry Septembers seem detrimental to the best development of the dahlia southwards, yet from New Jersey northwards, and especially as the lake regions are neared, some seasons produce them in a high degree of perfection in all sizes, forms and colors save blue. Dahlias make handsome beds pegged down and edged with some other composite flower such as marigold for instance in complementary colors. Everyone will make his own selection.

JAMES MACPHERSON.

Trenton, N. J.

Decorations at Washington.

One of the most elaborate feasts of the season was given by Secretary and Mrs. Hoke Smith, in honor of the President and Mrs. Cleveland. One noticeable feature of the decorations was the lack of the extravagant use of the large roses and profusion of carnations so commonly used in such decorations. Everything was light and graceful. The drawing rooms were decorated with palms, azaleas and ornamental plants. On the mantels were handsome cut glass vases filled with long-stemmed white roses. The table was laid for twenty. Down the center was a lake ten feet long by four feet wide; in the center of this lake was a rockery, the pockets being filled with growing ferns and small ornamental plants. Peeping through the foliage of these plants were a number of miniature incandescent lights. A heavy border of *Adiantum Farleyense* surrounded the lake, starred with one hundred red, white and blue electric lights, almost hidden in the foliage of the ferns. In the lake were plants of water hyacinths and *Eucharis* flowers, among which swam numerous gold and silver fish, producing a most pleasing and artistic effect. Some of the morning papers in describing this decoration said that to add to the pleasing effect there were a few ducks opposite the President's place for him to shoot at. A canopy of asparagus concealed the entire ceiling. These strings radiated from a large Maltese cross that was set with red, white and blue incandescent lights, representing the forty-five states in the union. The trailings of asparagus converged from this cross and

were caught at the mantels and draped over the mirrors, and were starred with red, white and blue globes. Suspended from the ceiling were a number of bird cages filled with singing canaries.

In the finger bowls was a frond of *Farleyense* with flowers of *Dendrobium nobile* and lily of the valley. Each lady was furnished a corsage bouquet of *Eucharis amazonica*, *dendrobium* and *Farleyense* ferns. The gentlemen's boutonnières were of *dendrobiums*. All doorways were portiered with asparagus, starred with miniature incandescent lights. The entire decoration was elaborate and beautiful. It was arranged by C. F. Hale.

REYNOLDS.

Orchids at Rochester.

That Mrs. W. S. Kimball's generous decision to maintain the magnificent collection of orchids intact and open to public view is appreciated is shown by the never ending flow of visitors. It keeps Geo. Savage constantly on the move, but he enjoys it as much as anyone.

Commenting on their several merits he is of opinion that whilst cattleyas have the pre-eminence from a commercial standpoint, there are several other kinds that can be made equally as profitable, particularly *angræcums* and *Dendrobium nobile* and *Wardianum*. *Cypripedium villosum* is far superior to insignie, better for cutting purposes, lasting twice as long and very free flowering. *Oncidium splendens* is one of the best of the oncidids. The flowers are large, borne on long spikes, color pure yellow. *Dendrobium nobile nobiliss* and *D. Wardianum*, the large flowering species, at present somewhat scarce, must become one of the most popular orchids for cutting. Some noble specimens of the kinds above mentioned are now in bloom and worth a long journey to see.

Without a doubt such institutions as these are the greatest educators of the horticultural age.

Mr. Savage has been confined to his house for several weeks with the grip, but is out again almost as cheerful as ever.

M.

New York.

Cut flower trade is exceedingly dull. Not only the general market, but the demand for everything, rarities and common grades alike, seems to have completely slumped. Last week during the warm spell the overstock was heavy, but under the influence of stormy weather since these conditions have improved somewhat, and while the demand amounts to nothing almost, yet the loss of stock is not so serious. The low temperature has kept the Greeks inside, and this big outlet for the surplus is for the time being discontinued. Prices have dropped to a lower point than for several months, and the bottom is not yet reached.

Louis Patterson, formerly of *Bebus & Patterson*, was run over and instantly killed on Monday evening, March 2.

Max Mosenthin died at his home in New Durham, N. J., on Thursday, March 3. The funeral on Friday was attended by a large number of the local florists.

The New York Florists' Club sent a beautiful box of flowers to the funeral services held on Monday evening for the late Adolph Ladenburg, who was lost at sea, as announced in last week's notes.

Millang & Wines is the name of a new wholesale cut flower firm which has started business at corner of Sixth avenue and West 30th street.

BAY NURSERY OF DE SMET BROS., GHENT, BELGIUM

Walter F. Sheridan will move on May 1 from West 30th street to 39 West 28th street.

G. W. Hillman, Jr., of the John Henderson Co. has been elected vice-president of the New York Cut Flower Co. in place of L. M. Noe, resigned.

Thorwald Jensen of Mamaroneck has a fine white sport from carnation Helen Keller, from which he expects great things.

Warendorff's "Prince Jim" secured the second prize at the cat show in Madison Square Garden.

The first may flowers and sweet peas are in the market.

O. J. Friedman of Chicago is in town.

Boston.

Cold and stormy weather has checked production sufficiently to overcome the danger of overstock, which last week seemed inevitable and conditions appear favorable for a maintenance of steady prices for a few days at least. There has been no serious disturbance of prevailing market rates on account of Lent, as yet, and with the exception of violets stock moves readily. Violets are very plentiful and the street peddlers are taking advantage of this, violets being their main stock in trade for the time being and their price at retail being no more than the regular stores are obliged to pay at wholesale. Lilies are coming in more abundantly and prices are low. Roman hyacinths and paper white narcissus are apparently about finished up for the season but they do not seem to be missed.

The retailers' windows are brilliant with hyacinths, tulips and daffodils. These showy blossoms are not in demand for cut-flower purposes as they once were but in pots singly or in pans of six or eight bulbs they find a good market and afford the owner of the moderate sized purse more color, fragrance and satisfaction generally than can be got in any other

way for the same amount. These flowering bulbs all come from Warren Ewell, who has an undisturbed monopoly of most of the bulb flower trade for Boston, and where the stock will not sell for its own sake, Warren's irresistible good nature comes to the rescue and undoubtedly while Warren is in the field bulbous stock is bound to sell. Out at his place in Dorchester the busy times are on and those who have only known the gentleman through his funny after-dinner speeches and entertaining sociability would hardly recognize him in working trim in the early morning hustle of the packing shed. The garden is one expanse of frames covered deeply with leaves and hay to protect the boxes and pans of bulbs from which the daily supply comes to keep the greenhouses full. In the houses now many thousands are in bloom making a gorgeous display. Up to date the varieties of tulips depended upon have been principally La Reine, Crimson King, Belle Alliance, Yellow Prince, Kaiser Kroon, Murillo and the early Duc van Thols. From now the later and better varieties such as Couleur Cardinal and Cottage Maid will be brought in and will command a better price. For daffodils Mr. Ewell recommends Princeps as the finest of the low-priced single varieties. For these as cut blooms together with Trumpet Major and Von Sion there has been a fairly steady demand. From a frame recently opened have been taken a quantity of pots and pans of promiscuous bulbs showing buds of incredible size. These are for the spring show at Horticultural Hall which will take place March 24 to 27.

The attendance of thirty members at the March meeting of the Gardeners' and Florists' Club on one of the most inclement nights of the season was conclusive proof of increasing interest in the organization and a good omen for the future. The president and vice president were both detained at home by sickness, and W. J.

Stewart acted as chairman. Amendments to the by-laws raising the cost of membership to \$3 and annual dues to \$3 were adopted, and considerable interesting discussion took place as to best means for increasing the attendance and interest in the meetings. Mr. Outram of England being present, was called upon for a few remarks. He told of the interest taken by his countrymen in the progress of American horticulture, which he said was phenomenal, our clear skies giving us an advantage in the winter months and enabling us to excel especially in florists' specialties. He deplored the lack of good all-round commercial novelties in the plant line, but in general the business prospects on the other side of the Atlantic are better than they have been for some years. Mr. Alfred Dimmock also said a few words in commendation of the increasing interest in orchids, which he noted more strongly on each succeeding visit to America. He said that there is no place in the United States where orchid growing is done so well as in the neighborhood of Boston. He predicted a great future for varieties specially useful for florists' cut flowers and believed the time was fast approaching when orchids will be as much of a necessity to every florist as are roses, carnations and violets.

On Saturday, February 29, Prof. Geo. F. Atkinson of Cornell University delivered a lecture in Horticultural Hall on "Some tendencies and problems in the evolution of species among parasitical fungi." There was a small but attractive exhibition of flowers on the tables including some handsome camellias and Himalayan rhododendrons from James Comley. The next lecture will be on March 14, when Wm. S. Egerton, Superintendent of Parks at Albany, will talk on "Ornamental planting for parks and public grounds."

Geo. A. Sutherland is receiving a quantity of *Acacia pubescens*. This fine old favorite retains its old popularity and

knows no rival. If it were more generally grown there would be a steady demand for it.

Paul Richwagen is one of the few Fisher growers left who still get satisfactory results from this locally favorite carnation. He is cutting a large quantity and the flowers are excellent. White carnations are good stock here just at present.

On mignonette Wm. Edgar has the market pretty well to himself. If there were kings among mignonette growers he would be fairly entitled to the distinction for this section.

A musical florist is a necessity to every Florists' Club and a valuable adjunct to every well-ordered community. Julius Zinn, at Newman & Sons, is the coming phenomenon in this neighborhood and his specialty is the mandolin.

"It never rains but it pours." Prospects are out for two new horticultural trade papers with the New England states for their field. The rivals are announced to appear this week.

Mrs. David Allan died on February 28 of consumption, aged 33 years. The funeral took place on Sunday and was attended by a large number of the craft.

Visiting Boston: Alfred Outram, representing Sutton & Sons, Reading, Eng.; Alfred Dimmock, representing Sander & Co., London; S. S. Skidelsky of M. Rice & Co., Philadelphia, and M. H. Walsh, Woods Holl, Mass.

Philadelphia.

March came in with a great bluster and blow, it was not so very cold but the keen biting wind which raised clouds of dust from the asphalt pavements kept shoppers at home, and business suffered accordingly. There is a great plenty of all kinds of stock except long Beauties, which are scarce. Anderson, Smith & Whitely, and Heacock are all cutting quite a lot of Bruuners, which seem to sell fairly well at from \$3 to \$5 per dozen, Beauties are to be had from \$1 to \$5 per dozen. The best teas are now \$8 per hundred, the smaller stock selling down to \$4. Carnations go mostly for \$1.50, \$2 being obtained with some difficulty for selected stock. Liliun Harrisii is plentiful at from \$6 to \$8. Tulips go slowly at \$3 and the growers say that the percentage of bulbs flowering is not up to the mark. Valley is overstocked and not as fine as it has been in previous years at this time; from \$2 to \$4 is the price. Violets sell for 50 to 75 cents and \$1 per hundred.

Azaleas, cinerarias, lilies, lilacs, hyacinths, daisies and begonias, about make up the list of plants seen in the store windows; there is not as much demand as there might be for this class of stock.

Easter plants are looking well and unless something unforeseen occurs there will be a fine assortment of well grown specimens with which to tempt the public. Mr. Harris has a particularly fine batch of lilies in all sizes, his genistas are also very good and the spiraea, duetzia, hydrangeas and other stock all looks very promising.

Robert Craig has a great many lilies in all sizes, his entire azalea crop is kept for Easter and will make a great show at that time. He also has a great quantity of tulips and hyacinths to be in at that time.

Jacob Becker has a good lot of very well grown lilies, and his stock of pot-grown roses will this season exceed anything he has ever had.

The March meeting and smoker of the Florists' Club held last Tuesday evening was a gala affair. The business of the

meeting was soon put through, the most important features of which were the report of the club room committee on the new quarters in Horticultural Hall, which are now in such a state of completion that prompt action was recommended so that they could be finished as was most desirable for the club. The space reserved is in one large room 41x69, this is to be fitted up in good style and when completed will be most complete in every respect. There is plenty of room for bowling alleys, pool tables, shuffle boards, shooting range, reading room and library. The paper for the next meeting will be read by John Gardiner of Conshohocken, the subject mushrooms. Mr. Gardiner has had considerable experience with this esculent and his paper will no doubt be a good one.

The business meeting being over the social features of the evening were ushered in, there was a large attendance by this time and a good time generally seemed to be enjoyed by all present. There was a violin solo by James Leslie, a dance by Alex Tulloch, a song by Jos. Ferguson. The Harris Bros. gave a German dialect sketch. Edmond Reid was heard from; the Battle of Killiecrankie was recited by Peter Miller, Signor Barilli sang an operatic selection. Hutchinson Dougall also gave a comic selection. Hillier & Smith contributed a song and dance, John Walker sang "Paradise Alley," John R. Cairns sang the "Golden Shore," Mr. Geo. Scouler gave a fine bass solo, R. Kift sang an original song about the members of the gun club, George McMillan sang a laughing song, Robert Craig favored the company with a song and he and Daniel D. L. Farson had a very entertaining tongue sparring exhibition. Each tried to present the other in what he considered his true light and the pictures they painted of each other were certainly wonderful. All those who took part in the entertainment were very good, Messrs. Scouler, Barilli and Dougall compelling encores.

There were pipes and tobacco in abundance, while sandwiches, lemonade, punch, and other refreshments were passed around during intervals. Messrs. Watson and Westcott and the house committee deserved a great deal of credit for the way in which they prepared the feasts both for the intellectual and the inner man. Ernst Asmus was in town for a day or two looking for novelties.

K.

Chicago.

Business is still quiet locally, though some large shipping orders are being filled in some lines. There is a great deal of stock coming in. The only line which shows any shortage is high-class Beauties, there being a preponderance of short-stemmed flowers. All the other roses show a drop in price; only the very best selected stock brings \$5, \$3 to \$4 being the average. Carnations are very plentiful, and good stock only brings 75 cents to \$1.25, fancy grown being \$1.25 to \$1.50. Some extra fancy varieties bring \$2, such as Rose Queen, and some very fine Buttercup grown by Stielow. The same grower is also cutting fine Helen Keller, which bring this price. Some blooms of Jubilee sent by Hill & Co. for exhibition at the Kennicott Company's would also bring this easily, but these cannot be quoted as regularly in the market.

Bulb stock is slow. Daffodils are still very languid, and their sale is not aided by the southern flowers, daffodils and jonquils, double and single, now being sent in. Tulips are poor, and poor sellers,

but honorable exception must be made in favor of Klehm's pink La Reine, which have been this season, as last, the finest tulips sent in to our market. As proof of this mention may be made of the fact that some of these flowers have been shipped to Thorley of New York, being received by him with the warmest commendation. Mr. Klehm is also picking very fine violets. Violets are now bringing 75 cents—early in the season, when we got poor little gnarled blossoms with a sage green complexion they brought \$2.

White flowers were much in demand the latter part of the week, owing to some very big funeral orders. This special line is about the most active part of the business now.

Mr. M. Stauch has returned from his European trip and has taken a position with the M. A. Hunt establishment at Terre Haute, Ind.

Otto Holinger, for some years superintendent of Douglas Monument Park and designer of the park, died February 13.

Mr. J. A. Pettigrew was in the city last Saturday and left on the Sunday afternoon train for Brooklyn, N. Y., where he is now installed as general superintendent of the parks of that city.

Henry Ives Cobb is arranging details of the plans for the new buildings for the botanical department of the University of Chicago. The new buildings, four in number, will cost \$400,000, and will be arranged in the form of a quadrangle joined by an arcade. Work will be commenced on the buildings in May and pushed as rapidly as possible. Prof. Coulter, the new head professor of the botanical department at the university, has incorporated many new ideas in the plans, and will have the finest equipment in the country for the building.

On January 7 Rowe & Burkhardt purchased the retail business formerly owned by H. H. Hilton at corner of Jackson boulevard and Ogden avenue. They have made extensive improvements and now have an excellent store. They report business as very satisfactory. Mr. Rowe was with Mr. Hilton during the World's Fair year and later was manager for Mr. H. C. Stenger on West Madison street.

Mr. Wm. Plumb of Oyster Bay, N. Y., was a recent caller. Mr. Plumb is visiting a daughter at Desplaines.

Visiting Chicago: E. Corbin, Grand Island, Neb.

Rochester, N. Y.

This week's trade may be reported as greatly improved, not only in the sales of cut flowers of every description but also in plant decorations on various occasions. Our principal stores did a fair amount of business and have orders ahead for a number of events which are to take place within the next week. Still all flowers are rather plenty, with the possible exception of carnations, these are generally sold as they come in, and for some time past not a single flower was carried over night. Roses are bringing better prices than they did last year at any time in Lent and are of good quality, but figures for other stuff suffered a decided lowering. Violets are plentiful, Californias especially so. The demand for the latter has decreased lately. Tulips and daffodils move very slow at wholesale, most of our storemen have an ample supply from their own greenhouses to meet the ordinary demand. Good sales however are made in bulbous stuff grown in pots and small flats, tulips of all the leading colors, hyacinths in variety and double and single daffodils are considered as decidedly appropriate for

VIEW IN THE STORE OF MESSRS. SIEBRECHT & WADLEY, NEW YORK.

daily parlor or table decoration, lasting much longer in perfection than the cut flowers would and the difference in price is not objectionable in most cases.

Mr. Geo. Savage is not only known as an expert orchid grower, but can manage other plants equally well; his violets for instance are a grand sight and have been so for months back; notwithstanding the almost daily pickings of many hundreds the plants are always covered with bloom, and as he ventilates regularly every day, the air in the entire neighborhood is filled with their fragrance, so that passers-by linger here to enjoy the gratis distribution of perfumery. He still sticks to the old rose *La France*, and grows these to perfection, better than anybody else in this section. They don't stop blooming with him at any time, but are just now sending up new vigorous breaks which will bring out great big blooms for Easter. We are glad to see him entirely recovered from his late illness, and at his usual post among his beloved posies again.

The old firm of Keller Sons has at last concluded to leave their little old store, which they have occupied for so many years, and will remove to more spacious quarters close by the old stand, corner North Clinton and Division streets, where they will be able to spread out a little more. The new store is to be fitted with all modern improvements, and a week or ten days more will see the old firm installed and ready for business in their new quarters.

In my last report I should have mentioned the several fancy varieties of *Dendrobium nobile* in full bloom at the Kimball private greenhouses. One medium-sized piece of *D. n. nobiliss* in a 7-inch pan is remarkably well flowered, being literally covered with a mass of bright deep colored large flowers, the number of flowers being estimated by one of the frequent visitors, a florist from a neighboring town, at between five and six thousand. It is to the credit of Mr. Geo. Savage, the superintendent, that he always succeeds in not only blooming his dendrobes so well, but also in bringing out the deepest colors in them to perfection, but we have to take into consideration that he takes special care of these fancy varieties, and being under his own super-

vision no one else is allowed to water or in any way handle such plants as he may take a fancy to and set aside for his own private amusement. A very fit companion to this beautiful piece is a magnificent pan of the true *D. n. Sanderianum*, probably the largest plant of the variety in this country, the bright coloring is brought out more vivid and is probably intensified by the almost pure white base of the petals, it is rather a stronger grower than the first mentioned, forming longer and stouter canes although the individual flowers are a trifle smaller. *D. nobile Cooksonianum* also is represented in good specimens well covered with bloom; the center part of the petals are of a very deep color and have a velvety appearance and the flowers are very large. *D. n. elegans* also is larger than the ordinary type and the petals are pure white at the base, flushed gradually toward the edges with an increasing deep rosy purple and the lip in front of the velvety maroon blotch is of a distinct pale sulphur color. *D. n. Schneiderianum* resembles the last mentioned in the sulphur yellow shadings of the lip, but has a blotch of a more decidedly deep purple color instead of maroon and is a truly handsome variety. *D. n. Tollianum* has irregular purple striped and blotched petals on a lighter ground and is a grand variety as seen here. All the above varieties along with a few other rare species, Mr. Savage considers his special pets and no one is allowed to in any way interfere with them, he administers to their wants personally, but says that only ordinary common sense care is given to them, such as all dendrobes should have, and the only point to guard against is not to let them get on the dry side at any time while growing and after growth is completed to give them a cool rest. His *Wardianums* he treats in the same manner and a number of large pans of these are noteworthy for their long well-flowered canes. One extra sized specimen, labeled *D. W. giganteum*, is really extraordinary for its long, stout and more upright growth and the immense size of its individual flowers, measuring over four inches across, and seemingly of a better substance, fleshier and thicker in texture than the ordinary form. In the large collection of cypripediums many of the newer and rare species

and varieties count among Mr. Savage's special pets to which he devotes his time and attention with invariable success.

J. B. K.

New York Store of Siebrecht & Wadley.

Our illustration shows the interior arrangement of Messrs. Siebrecht & Wadley's store at 409 Fifth avenue, New York. The view is taken looking from the back towards the entrance. In the rear of the establishment is a large conservatory filled with palms and other decorative plants, also a large yard, packing sheds, etc., which affords one of the most convenient establishments for the transaction of an extensive business in this crowded section of the metropolis.

St. Louis.

The weather for the past week has been exceptionally warm for this season of the year, but it does not bring much comfort to the wholesalers and their friends the growers. The demand has been very light, and prices have gone down. The fakir is with us again, and every available street corner in the downtown district is adorned by him; he seems to be a great help to some of the commission men to take the second class stock, but by the legitimate florist he is regarded as a great nuisance. Flowers of all kinds are plentiful, and in my rounds to the commission houses I found them all stocked up to the brim, and flowers can be bought at the buyer's price. The cut flower trade is about up to the average for the second week of Lent. White flowers were in brisk demand, several large funerals causing this.

In roses good stock, all kinds, brings from \$4 to \$6; poorer grade go as low as \$2. Beauties, extra good blooms, remain scarce; the only real good Beauties in town come from Tesson's and bring 50 cents each. In carnations there was a great glut last week, especially in red. The white sold well, also Scott and Day-break. The last two have the call at all times. Prices range from \$1 to \$2.50, the latter price for extra fine blooms. Bulbous stock is very plentiful. Tulips of all kinds are fine, but find a slow sale; \$2 to \$4 are the top figures. Valley, hyacinths and daffs are the same as quoted last week. Harrisii is low down and sell at \$4 to \$6. Violets have taken a great tumble in price, and every commission house is loaded down with them. Home grown were sold as low as 12½ cents per hundred. Double violets go at 35 cents, southern very few sold.

Recent visitors were Martin Renkauf, representing H. Bayersdorfer & Co., Philadelphia, and J. M. Gasser of Cleveland, O., who spent a few days in the city on his way south for his health.

Thomas Carroll has a new white carnation seedling he calls Snow-drift; it is a cross between McGowan and Scott. Mr. C. claims it is one of the earliest bloomers, and from its appearance I think Tom has a prize winner.

E. H. Michel had a carnation exhibit at his store on Wednesday afternoon, March 4.

At the Bowling Club Monday night some very high scores were made. Martin Reukauf attended and rolled with the boys. The highest three games rolled were made by D. Helwig, 632; F. C. Weber, 613; J. J. Beneke, 567. The first single score was made by D. Helwig, 247; second F. C. Weber, 216. Kunz, J. Young and Beneke were tied for third place with 194. Fleckenstein and Michel had a

great time trying to outbowl each other. Fleck. came out on top, with a score in three games of 336, Michel 316, but in poodles Michel won, he making only 3 and Fleck. 7. The attendance was large, only two members being absent. Next Monday we will have a prize bowling match. Every member should be present.

J. J. B.

Pittsburg.

The new propagating and growing houses at Schenley Park although not entirely finished are far enough advanced to have eight of them in use. When finished they will consist of eleven houses covering 364x118 feet and will permit the growing of anything in the line of floriculture; these are erected by the city of Pittsburg. Mr. Phipps has made a donation of a large addition to the Phipps conservatories, to be built in the rear of them and in front of the propagating houses; the connecting house by which you enter from the palm house of the present conservatory, will be 100x60 feet with two wings 84x28 each about 40 feet from the entrance, thus forming a cross. Messrs. Lord & Burnham have the contract to erect these and they will begin to build early in the spring; when all are completed, the conservatories will be used for exhibition purposes only, and it is expected that these will be much more elaborate even than they have been. Mr. Joe Spring, in charge now, has everything well under way for the show at Easter; there will then be many flowering shrubs as well as flowers to see, one among the many is clematis in twenty varieties and about 1,000 plants, these with lilacs, in six varieties, plums, cherries, currants, spiræas, deutzias, roses, etc., cinerarias, cyclamens and with the thirty-five thousand bulbous plants in flower, the expectation of the late Mr. Bennett that this Easter exhibition would far surpass those heretofore given will be realized and that the thirty odd thousand dollar investment in the propagating houses was what was needed to have an exhibit all the year round that would be really first-class and instructive, giving the citizens valuable returns for the investment.

Messrs. J. F. Gibbs & Son, growers of cut flowers at Woodville, about ten miles out from the city, have a very complete place. They have ten houses covering about 14,000 feet and have their own gas well on the premises, which ensures them an abundant supply of the ideal fuel. Three of the houses are devoted to violets, the rest to carnations, roses, smilax and bulbs in season. They are very successful growers, especially with carnations and roses. Mrs. Gibbs is a valuable addition to the firm and manages their stand in the Allegheny market so as to make many friends and yet get a goodly share of any business going. Last season they had to increase the size of their place and expect to add several more houses this summer also.

The Florist's Club held its regular meeting on Thursday, 27th ult. for the first time in their new quarters in G. A. R. hall corner Federal and Lacock streets, Allegheny City. There was a large attendance and all were very well satisfied with the room, it is well furnished and we were not annoyed with the noise of passing trains, which was the great detriment in our former quarters in Maginn's Hall. It is to be hoped that now that the club has a first class place to meet in, the members will attend regularly, lending a helping hand (and mouth) to make the meetings interesting

ENTRANCE TO C. PETRICK'S ESTABLISHMENT, GHENT, BELGIUM.

and profitable. Two new members were elected to membership, viz. Mr. Louis Schmitt, who is a very able employee of Mr. John L. Wyland, and Mr. T. P. Langhans, who has recently engaged with Mr. Gustave Ludwig, florist in Allegheny market; it is expected that both will prove valuable recruits. One name was handed in for membership to be acted on at next meeting.

Mr. Julius Ludwig furnished for inspection large bunches of Bride, Bridesmaid and Souv. de Wootton roses, and carnation Mrs. Hoffmeyer, a yellow tipped with scarlet, flower very large and fragrant, the roses were equally as good, and all were universally admired and reflected great credit on the grower, Mr. Chas. Hoffmeyer of Carnegie, Pa. Mr. M. C. Dunlevy also of Carnegie exhibited blooms of a new carnation grown by him, it is a sport from the E. A. Wood, and similar in color and form to Daybreak, although of a different habit; it is a good grower, long stemmed, blooms large and fragrance good; the opinion of the members is that it is a good one.

The committee having in charge the engrossing of the memorial resolutions of Mr. Bennett brought them to the meeting for inspection, they are a remarkably fine specimen of artistic pen work, affording the club great satisfaction and will be given to Mrs. Bennett without delay. Credit is due to the proprietor of Duff's College (where the work was done) and to Mr. White the artist, for the extracare taken with them; for being great admirers of Mr. Bennett themselves, esteemed it a privilege to do the engrossing and gave expression to their feelings in the beautiful artistic production embellished with flowers and vines.

After adjournment the club went to a nearby hostelry for the social pastime arranged for by the committee, where with speeches, stories, "flow of soul," etc. the thirty, (I had almost written thirty) odd members enjoyed themselves thoroughly until near midnight. The next social will be held on the fourth Thursday of this month.

The trade has been fairly good for this season, one or two days very good, prices about the same as last week for all stock but lilies, Harrisii being offered at 50 cents per dozen in the Allegheny market and slow sale at that.

Mr. Archie Elliott has associated himself with Mr. McGinness under firm name of Elliott & McGinness and have suc-

ceeded the B. A. Elliott Co. at 54 Sixth street, in the florist and seed business, the old firm still retaining the nursery and greenhouses. They have the best wishes of many friends for their success, and being both energetic and young, they ought to command it. They say they have nothing to complain of so far, are getting their share of trade.

It is with pleasure I write that Mr. Wm. Falconer has re-considered his decision regarding the position of Superintendent of Parks here, Mr. Bigelow, Director of Public Works, having received a telegram from him accepting the position. It is very gratifying to have such an able man to succeed the late Mr. Bennett, and one whom every reader of the FLORIST knows by reputation as being pre-eminently fitted for the position. It is not known just when he will be here to assume charge, but it is surmised it will be in about ten days. REGIA.

Toronto.

Trade this week has been very fair, as although Lent makes itself felt by the cessation of social entertainments, etc., there have again been several large funerals which have kept things going at about the average pace. The weather, although still cold, has been more sunny, and this is bringing up the supply of roses more equal to the demand. There are some beauties to be seen in the store windows now. Spears & Muston have been sending in some magnificent Bridesmaids.

In my last week's notes concerning the meeting of the G. & F. Association I omitted to mention a calla in a 10-inch pot which was brought down by Mr. Frost; the plant, which was a large one, completely filling the pot, was said to be only 14 months from seed, appeared to be dwarf, very prolific, with flower scented and of good form.

Messrs. Simmers Bros. have just finished the improvements to one-half of their store, but great as is the increase of floor space, things are still crowded, and they will improve the other half next year. Business appeared to be very lively with them, mostly catalogue trade at present.

Arrangements with regard to the issue of a horticultural paper for the Dominion of Canada are rapidly progressing, and it is probable that the first number of "The Canadian Garden" will be out some time in April. The company's prospectus will be sent round in a few days. E.

BOTANIC GARDENS, BRUSSELS, BELGIUM

San Francisco.

The first week in Lent sees the trade in a very poor condition. Everything is quiet now, and consequently prices are very low and stock over plentiful with but very few exceptions. Violets are a decided drag on the market now and are likely to continue so for several weeks. The quantity of the California violets is very small now, showing that their season of blooming is drawing to a close, the dry weather we are having also shortening up the season. Roses are in good demand yet and the quantity coming in is nearly equal to the demand. Quite a lot of Duc Von Thol tulips are to be had now but everything in the bulbous line goes slowly with the exception of Harrisii. Good carnations are not over plentiful and some days they are quitescarce. Portias in particular are very poor. Some fine Scotts and Daybreak are to be had. These bring 35 per dozen.

Mr. John Carbone, who was so successful with chrysanthemums last fall, is now cutting some very fine roses. His other stock also is looking very fine.

Mr. Sidney Clack at Menlo Park reports trade as being very good especially in the plant line. A large force of men has recently been added so that everything is quite busy at present.

It is rumored that a new store is to be opened on Post street next week opposite John H. Sievers.

It becomes my sad duty this week to announce the death of Mrs. Edw. Parsons of San Jose, wife of Mr. Edw. Parsons the San Jose florist. She died very suddenly the other night, being sick only a short while. This was a great shock to Mr. Parsons and his large circle of friends who sympathize with him in his sad affliction. The deceased was a very estimable lady, a Miss Taber. They were married in Flushing, L. I., New York, several years ago, and came to California two years ago, when they settled in San Jose. The

trade wishes to express its heartfelt sympathy to Mr. Parsons.

Mr. Dan Driscoll of the Sunset Seed and Plant Co. has been seriously ill at his home for the last week. Dan never fully recovered from his late illness, but we hope to see him around soon again.

METEOR.

Los Angeles, Cal.

There have been seven new stores for the sale of cut flowers opened in this city since December 1 last.

B. F. Collins is operating two stores, his new one being located on Broadway, and business reported good in each.

The old reliable Central Park Floral Co., under the management of Mr. Eli Snyder, is more popular than ever. Their business last year increased over 30 per cent. over 1894. This firm handled at retail last year more than one million carnation blooms.

Mr. Wm. McMillan, Supt. Buffalo, N. Y., Parks, enjoyed a trip through the principal parks of our city recently with Supt. Meserve of this city. Mr. McMillan was pleased as well as surprised at some of the revelations in this "Land of Sunshine."

Elmo R. Meserve, Supt. of Parks, has tendered his resignation to the commissioners of parks. Mr. Meserve wishes to be relieved in order to devote his entire time to his private business, being largely interested in the Highland Park Floral Co. as well as some other enterprises. A strong pressure is being brought to bear upon him to reconsider his action and to remain at the head of the park system. There are plenty of aspirants for the position should it become vacant.

Capt. F. Edward Gray is cutting from 6,000 to 8,000 carnations daily from his field of carnations. How is that for mid-winter?

The nine parks embraced in the Los Angeles system are now the admiration

of the thousands of tourists who are thronging the city. Many of the trees including eucalyptus and acacias are now blooming. Shrubs such as laurestinus, escallonias, genistas, etc., together with over 100,000 annuals are in the same attractive condition. Then the roses, geraniums, verbenas, heliotropes and many others are always blooming. Is it any wonder this locality is so charming to those who flee from "Lands of snow to lands of sun."

President J. C. Harvey of the Los Angeles Botanical Society is pushing the formation of the botanical garden in Elysian Park. Already a good start has been made and many rare trees and plants are already established and making good growth. Mr. Harvey is an enthusiast and in his work is aided by a few of the members of the society. Would that more would show the same activity in the good work.

W.

A Heating Question.

I intend to build this summer a new greenhouse in addition to the four houses which I now have. The new house will be 20x100, walls three feet in ground of concrete and three feet above of lumber, except on the south side, where two feet of glass will be used. The roof will have the long span to the south and will use butted glass. There will be a path two feet wide against the walls and in the center one three feet wide. The bench will rest on brick piers, the timbers 6x6 inches and running parallel with the paths. On top of this will use 2-inch planks and will heat by hot water system, the main pipes running against the wall and return pipes under the benches.

Can some reader of the FLORIST suggest improvements on this plan? Would also like to know how many feet of 2 or 4-inch pipes should be used to keep the inside temperature to 50° when it is 10° below zero outside. The new house will be

devoted mainly to carnations. The house will run east and west, and will have double walls. TH. VAN DER MEULEN.

Dunkirk, N. Y.

OBITUARY.

MICHAEL FRANCIS GALLAGHER, for many years a prominent retail florist of Chicago, died February 29 from injuries received while alighting from a suburban train the night before.

As he stepped from the car to the platform the train started and at the same moment a gust of wind blew his hat from his head and rolled it along the platform. In attempting to catch it he slipped and fell between the car and the edge of the platform. The moving train almost crushed his life out before he finally fell to the ground, where the rear trucks of the last car passed over his legs below the knees. The injured man was taken to a hospital, but his injuries proved fatal and he died early the following morning.

"Frank" Gallagher, as he was familiarly known, was born in New York City, August 15, 1856, and until he came to Chicago, sixteen years ago, was employed in a fruit and flower store in the metropolis. In Chicago he first started a fruit stand near the old Board of Trade and later took half of the store where the business is now located, he conducting a business in fruit while the late James Farrell occupied the other half of the store as a florist. When Mr. Farrell moved away Mr. Gallagher took the whole store and combined both businesses. Later he dropped the fruit department and devoted all his space to flowers. He had the most attractive store in the city and did a large business.

He was active in political circles, was a member of many organizations and an early member of the Chicago Florists' Club and the Horticultural Society of Chicago. He was buried last Monday with military honors by the Seventh Regiment, I. N. G., of which he was quartermaster.

A widow and a daughter, aged 9 years, survive him.

The Gallagher Floral Co. is a corporation and Mr. Gallagher's death will probably make no change in the name or conduct of the business.

We are very sorry to have to announce the death of Mr. E. W. Bergstrom of Highland Park, Des Moines, Iowa, on March 2 of consumption. He was at one time manager of Cole's conservatory, also member of the firm of Rollinson & Bergstrom of this city. He was in the employ of the late M. A. Hunt when the latter was in business in Chicago. Returning to this city he engaged in business for himself, until about nine months ago, when ill health compelled him to give up active work.

He leaves a widow and two children to mourn his loss.

The funeral was under the auspices of the I. O. O. F. The Florists' Club sent a floral tribute and attended the services in a body. J. T. D. F.

Herbaceous Plant Notes.

A few words on the dividing and replanting of herbaceous plants may interest some of the readers of the FLORIST. Although with the majority of such plants the performance of this operation is very simple, and most any handy man on the place may be entrusted with the work. It is not plants like the achilleas, aconitum, œnotheras, myosotis, rud-

beckias, helianthus, pyrethrum, phloxes, etc., I shall have to say anything about but of those that have not the ability or inclination to develop roots so freely as the above. Take for instance Senecio pulcher, one of our most valuable summer and autumn flowering plants, and I am very much in doubt whether the average handy man would make a success of dividing a batch of these plants and have them live. This species is inclined to rot out in the center and requires renewal every few years. The best way to handle these old plants we found is to dig them up carefully and cut off the main long tap root close below the crowns, a number of small rootlets, which are very brittle, will be noticed all around the base of the crown and these must be preserved. The operation should be performed as early in spring as possible in order to give the plants a fair chance of making a vigorous growth before midsummer or their blooming time. If there is any room to spare in a nice sunny frame, it need not be a hotbed, though the latter is preferable, we pot the single crowns into 3 or 3½ inch pots and here they will root freely inside of two or three weeks, when they can safely be planted out in their permanent quarters. The dividing of this senecio at any other time in the year is very seldom crowned with success unless the weather be very favorable to root formation and the risk of losing the entire stock is avoided by attending to it early in spring.

Trollius of various kinds also succeed best when divided as soon as the ground opens up, the roots are very brittle and care should be exercised in preserving them. I advocate spring division for these things because in fall planted stock the combined action of frost and sun toward spring will cause heaving out even with a covering over the bed, and the result in most cases is a disastrous damage to and loss of plants, while early in the year before the plants have made any growth the risk of losing the plants is greatly reduced. They should be divided into single crowns and immediately replanted in their permanent place. A rich moist soil should be provided for them but not wet, their liability to rot in newly manured land is well known to all who grow trollius to any extent, and it is best not to spade in any fertilizer in a contemplated bed, later on when the plants have made a fair start and are growing freely a liberal top dressing will greatly be to their benefit.

Old clumps of delphiniums do not always divide to our satisfaction; especially is this the case with the finer light colored varieties, which do not seem to possess the same robust constitution of the more common darker sorts. As a rule they don't develop such a clump of roots and when we dig up a plant with eight or ten growths we find often only one main taproot and no possibility of getting more than two plants out of an expected half dozen. A sure way to increase such plants is to wait until the young growth is about three to four inches high and then take off the cuttings, which when taken with a heel will root as fast as a verbenas cutting. In this way we can save the old plant, which will break out again from the dormant eyes on the root stock and we also increase our stock.

Hesperis matronalis fl. pl., the double sweet rocket, wants dividing every second or third year. In many instances the center of the plant will be found entirely rotted out, the best way to treat such plants is to thoroughly clean them of all decayed matter and wash them out, then divide into single crowns, which should

be potted and placed in a frame, the same as recommended for senecio, before they can be planted in their permanent quarters. It is not the frost that causes the decaying of the center in these plants but the moisture which gathers on the decomposing foliage in fall and winter penetrates into the heart of the plants and ruins them. Removing the foliage in autumn will greatly reduce their liability to rot.

Leontopodium alpinum, if separated to single crowns will produce much larger and finer bracts and flower heads, but should be handled careful and replanted without delay, for new roots are formed soon after the snow disappears and these young roots must be preserved, otherwise the plants have a slim chance to endure our dry summers.

The beautiful Chelone Lyoni too is better potted up after dividing and placed in a frame for two or three weeks, many of them will only have a few sound roots attached, and there is danger of losing a large percentage of the divided plants should we undertake to plant them immediately in the open ground, but as soon as they have sent out a few roots in the pots they are safe to go out and will make vigorous growth the first season. If catananches have suffered from the cold and look dead, don't be alarmed, usually they come out all right and in good shape a little later on. Old stools of them may be divided safely in spring, still probably a better way is to raise them from seed, which if sown early in the season will produce blooming plants the first year.

Centranthus ruber (Valeriana) is subject to decay in the center, cleaning and dividing will be of great benefit to such affected plants, which otherwise would be in danger of being destroyed by the spread of the rot. This also will form good blooming plants the first season from seed, and this is undoubtedly the better way to increase the stock, but when a special well colored variety is to be propagated, seed cannot be relied on and division is the only way to multiply them.

Such things as Daphne Cneorum can only be cut up into smaller plants when old stools have been planted deep enough to allow the separate branches of them a chance to form roots, otherwise we seldom can divide an old plant into many separate pieces. If the plants are layered down in early spring, a good supply of young stock may be cut off the following spring, though by fall the roots may have formed I prefer to leave the stools undisturbed over winter, as there is less danger of losing a very large percentage of the spring transplanted stock compared with the fall planted. Root action is then very active, and any sprig with a few rootlets attached will have a decidedly better chance of living and growing out. Cuttings of the half ripened wood at any time of the year also will strike freely and where no large old plants are at hand this mode of propagation may have to be resorted to, though it is a very slow process.

Æthionema grandiflora seldom forms a spreading root stool which would divide readily and deep planting or hilling up must be practiced to increase the stock of these most charming free blooming plants. Their tendency to form new roots is not so strong as in the daphne, and the little branches to be layered should be notched in with a knife, a rather long slit being preferable. The young plants or layers when well rooted will be all the better by being potted up and placed in a frame, so as to get well established before

planting out. I always prefer potting off such things in the early spring months, because then a few weeks' attention will thoroughly establish them, while if taken off in summer or fall, far more trouble is experienced and a much longer space of time is needed by them in the formation of sufficient roots for the support of the weakly rooted plants.

Heuchera sanguinea, one of our most beautiful continuous blooming hardy plants, is easily divided, I only want to say about it that the plants not only look better but also flower more profusely when broken up to single crowns, and should be divided every second year. The older plants will become long and weak in the neck to some extent; by separating and deeper planting this is avoided and also gives new vigor to the individual crowns. There is a great future in store for this plant when better known not only as an herbaceous plant but also for forcing purposes. After New Years it may be put into gentle heat and will then readily respond to the treatment, producing long stems of its pretty flowers in profusion. Equally useful for cut flower purposes, the plants when in bloom would sell surely at Easter or any other time and in spring the potted plants will be in demand for bedding out as well as for veranda boxes and vases. The description of the plant was given last summer in my herbaceous plant notes.

The early flowering hardy primroses such as *P. veris* and *P. acaulis*, etc., also the auriculas, are better left undisturbed until after their flowering time, when they should be broken up into single crowns and replanted. Dividing them before they bloom will seriously interfere with the free production of large and perfect flowers and usually there is plenty of time to perform the operation after they are done blooming and before the hot and dry weather sets in. A little shading for a few days after planting will do no harm and in bright sunny weather serves to keep them from flagging. A thin layer of grass clippings from the lawn all over the ground is as effective as anything.

Rochester, N. Y. J. B. KELLER.

Greenhouse Building.

Madison, N. J., Walter Reid, 400 running feet of commercial houses. Hitchings & Co., builders.

West Hampton, N. Y., W. F. Jaeger, three carnation houses, each 18x100.

Mohegan, Conn., Wm. A. Cooke, greenhouse, 50x200; boiler house 32x34 and water tower 50 feet high.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Placard advts. not admitted under this head.

SITUATION WANTED—By a competent all round florist and gardener; 16 years' experience; age 31. First-class reference. W R, care Am. Florist.

SITUATION WANTED—In a commercial place, by a young man of 3½ years' experience. State wages with board. F. G. BEHLING, Y. M. C. A., Scranton, Pa.

SITUATION WANTED—By a gardener for all departments; can grow all kinds of specimen plants and fruits, and have taste for arranging. E. D. ILL., care Am. Florist.

SITUATION WANTED—As foreman, first-class grower cut flowers, plants, etc.; age 28, 15 years' experience, excellent testimonials. E. S. V., care American Florist.

SITUATION WANTED—In greenhouses or private place, single, age 27; can send best of references to any address; Illinois preferred. P. O. Box 881, Plattsmouth, Neb.

SITUATION WANTED—As foreman or manager; well up in all branches cut flower plants, decorating, etc.; age 28; first-class references. LOQUAT, care American Florist.

SITUATION WANTED—By a young American; 8 years of experience; a first-class potter and propagator; good references. Address FLORIST, West Grove, Chester Co., Pa.

SITUATION WANTED—German, 30 15 years' experience; good rose, palm and general stock grower; references from large establishments. Address FLORIST, 131 Hamilton St., East Orange, N. J.

SITUATION WANTED—By a single man, age 30 as assistant in commercial place; 15 years' experience, but only a short time in this country; state wages. G. S. SYEDLUND, Montgomery, Pa.

SITUATION WANTED—By young lady in flower store; five years' experience in retail and wholesale stores; competent to take entire charge of a store; best of references. H, care American Florist.

SITUATION WANTED—As foreman or manager by a successful rose grower and general plantsman; 19 years' experience, age 35 years, married; references given. Address A F, care American Florist.

SITUATION WANTED—As foreman in a commercial place; good cut flower and plant grower. Married. First-class references furnished from present employer. Address with full particulars, C M, Box 663, Knoxville, Tenn.

SITUATION WANTED—By a young man skilled in growing general greenhouse stock, soler and industries; 5 years' experience; permanent place preferable to high wages; east preferred. Address WESTERN, care American Florist.

SITUATION WANTED—By a practical all round Scotch florist; long experience in this and other countries. Single. Can furnish the best of references. State wages. Address J. H, No. 13 South Pond St., Newburyport, Mass.

SITUATION WANTED—By a practical cut flower grower, with 12 years' experience; thoroughly competent to take charge of a place; age 23; specialist in roses; state wages. Address L. H. WOOLCOTT, 62 Delaware Ave., Buffalo, N. Y.

SITUATION WANTED—By well experienced florist and gardener; American, eastern and western experience; nothing wanted but a first-class place, either private or commercial; first-class references. Address MICHAEL HICKEY, New London, Chester Co., Pa.

SITUATION WANTED—By a middle aged florist and gardener; no children; temperate; well experienced in every branch of horticulture, especially greenhouses. Good private place preferred. Best references from prominent employers. Address E M, care American Florist, Chicago.

SITUATION WANTED—As foreman in commercial florist's establishment; long experience and successful grower of all florists' stock; well known as one of the best rose, carnation, violet and chrysanthemum growers in the country; middle age; salary moderate. Address FLORIST, 24 Grand St., Waterbury, Conn.

SITUATION WANTED—By capable man as manager of large commercial place; graduate of Hort. College; 12 years' experience; formerly employed at the Wm. Rose Conservatory, Nutt, Mass.; at present with Bassett & Washburn; will be at liberty April 1st. Address H. KARLSON, care Bassett & Washburn, Hinsdale, Ill.

SITUATION WANTED—By a German florist, single, 40 years old, 20 years' experience in commercial floriculture; wants a place in a reliable catalogue house; understands the culture of roses for both purposes, decorative stuff, palms and ferns; propagation of hard and soft wood, decorating and designing. Address SCUM CUIQUE, care Am. Florist.

SITUATION WANTED—By good competent florist, 35 working foreman or assistant; commercial or private place. Graduated from a horticultural school in Sweden; 11 years' experience; 5 years from one of the leading rose establishments of America. Strictly temperate; energetic; single; age 27. Good references. Address 33 Savin Hill Ave., Dorchester, Mass.

SITUATION WANTED—By well educated, energetic German florist; 18 years' experience; good manager; first-class hedges, designer and all round grower. Have been employed at some of the best establishments of Germany, France and Switzerland. In this country 6 years; in present place 4 years. First-class references. Address R W, care American Florist.

WANTED—A first-class propagator for roses. Apply to BASSETT & WASHBURN, Hinsdale, Ill.

WANTED—A young man as assistant florist; give experience and reference. Address T C, care American Florist.

WANTED—A young man for general greenhouse work and to help in building a new plant, with board. J. E. FELTHOUSEN, Schenectady, N. Y.

WANTED—Young man experienced in house, table decorating and design work; answer with references, and state experience and wages expected. Box 98, Sta. F, Cleveland, O.

WANTED—An experienced first assistant for 10,000 feet glass, cut flowers and plants; wages \$20 per month and board. Address with particulars GEO. S. BELDING, Middletown, N. Y.

WANTED—One of "Solly's" books on "Bedding Designs, Colored Illustrations," either new or second hand; quote price. BENJ. J. PASSMORE, Swarthmore, Pa.

WANTED—Rose grower for commercial place, eight large houses; must have had long experience; state wages. Address SIEBRECHT & WADLEY, New Rochelle, N. Y.

WANTED—Two men of experience, unmarried, to grow roses and carnations; must have references and not afraid of work, also who want to stay at one place for two or three years. To go to California. Address CALIFORNIA, care American Florist.

WANTED—A working foreman for a nursery, to propagate and grow stock for park purposes; a married man preferred, as must live in house connected with nursery. Answer, giving experience, wages expected and references; must be temperate and of good character. Address Supt. of Kenev Park, box 553, Hartford, Conn.

FOR SALE—Fremont greenhouse. Business and location good. J. STAIKEY, North Bend, Neb.

FOR SALE OR RENT—Two even span greenhouses, connected, each 18x53, potting shed and sleeping room; new and well stocked; hot water, no competition. RETAIL FLORIST, care Am. Florist.

FOR RENT—Eleven greenhouses all heated by low pressure steam; this is a good chance for a man to go in business with a small capital; write, information free; location good. Address HENRY MOORE, McLemore Ave., Memphis, Tenn.

FOR SALE—Greenhouse property in a large city west of Chicago, 800 feet of glass, 8-room house, two horses, two wagons, \$3,000 worth of stock; ground rent \$5 per month; price \$5,000, one-half cash. Address BUSINESS, care Vaughan's Seed Store, Chicago.

FOR SALE—Cottage house, 7 rooms, with first-class repair, acre of prime land, center of lively town, 10,000 inhabitants, four railroads, 2½ miles from Boston; first-class opening for a florist of moderate means, no competition. Address MICHAEL RYAN, 22 Boylston St., Brockton, Mass.

WANTED

475 CAROLINA POPLARS, fifteen feet high.

GEO. MAMEROW, 2595 N. W. 42d St., Chicago.

Buffalo.

Looking in upon President Wm. Scott I found that gentleman in the best of spirits notwithstanding the enforced bodily idleness necessitated by the recent accident he met with. He says it will be the longest vacation he has ever enjoyed and does not wish for another such.

He read with interest the reports of the Carnation Society meeting and regretted the essay he had prepared was not completed in time for the meeting. We shall have the benefit of his ideas in a future issue of the FLORIST.

His business has not suffered by his absence, being in charge of Mr. L. Nenbeck, who has been in Mr. Scott's employment many years as foreman. He has as usual a choice lot of Easter stock for which the demand will be, from present indications, as good as ever.

J. H. Rehstock is making a fine display at his downtown store.

W. Palmer, Sr., with D. B. Long, have returned from the cast full of carnation lore and promise to give at the club's annual election and banquet on the 10th inst., to which all visiting brethren are invited, an account of their experiences in the metropolis. M.

Worcester, Mass.

So far Lent has not interfered very much with trade and though flower sales have fallen off a little we have had enough funeral work to more than offset the loss.

Good flowers are herein abundance and variety; roses of very fine quality are coming in daily in large quantities and carnations seem better than ever. Daybreak especially is very good.

Bulbous stuff, of course, is plentiful, though not too much so and what is better still is A No. 1 in quality. Violets are abundant and good. Lange has a small crop of California that have done a little to justify this much abused variety.

Azaleas in pots have been having a ready sale. Prices are very fair.

E. O. Orpet of Lancaster gave a very interesting talk on "Chrysanthemum culture" at the winter meeting of the W. C. H. S., on Thursday, February 27, dealing with the subject in a way to interest the amateur.

Mr. Orpet, together with a few horticultural enthusiasts, enjoyed the hospitality of Mr. F. A. Blake at a pleasant luncheon, preceding Mr. Orpet's lecture.

A. H. L.

Trenton, N. J.

Mr. Wm. Moore has a metropolitan window. He is born to an appreciation of color proportion, it seems to me. To-day with a base of yellow and white he studs with scarlet, purple and pink, neither one overdone, nothing misplaced. It seems hopeless to teach these delicate touches to many. Harmony isn't given to everybody. J. MACP.

Rooted Cuttings.

Herr's Cold Storage Pansies—\$12.50 and \$15.00 per 1000; 50c extra per 100.

Coleus—Red and yellow, also twenty sorts of the finest fancy-leaved, at \$5.00 per 1000, or 75c per 100.

REPLANTED STOCK, in fine condition for potting;

Ageratum—Cope's Pet, blue, 10c per 100; by mail 75c.

Fuchsias—Best singles, 18c per dozen; by mail, 25c.

Heliotrope—Fine sorts, 18c per dozen; by mail, 25c.

Pansies—Herr's strain, none better, \$8.00 per 1000, or \$1.00 per 100; by mail, \$1.20 per 100.

Verbena Seedlings—Our own extra select, fine pleasing colors, \$5.00 per 1000, or 75c per 100.

Stock grown by Daniel K. Herr. Address communications to

ALBERT M. HERR,
LANCASTER, PA.

J. B. 4365

PROFITABLE SWEET PEAS.

FROM careful personal inspection of all the new and old varieties in the famous pea growing districts in California, and from actual selling qualities shown in the San Francisco Flower Market—the largest in the world for this flower—we find the following seven kinds, for size, stems, prolific habits and other most desirable qualities unequalled. They comprise the leading salable clear colors which are always appreciated. Fill seven vases each with 100 sprays of these, and set them in a row in your window, and you need fear no competition in your trade on this flower.

BLUSHING BEAUTY, clear Daybreak pink

HER MAJESTY, pure solid rose.

FIREFLY, bright fiery scarlet.

cure insertion in the issue for the following Saturday.

Address THE AMERICAN FLORIST CO., Chicago.

THE EMBARGO on imports from Japan
has at last been removed, but the removal
comes too late to be of much value so far
as the present season is concerned.

PHOTOGRAPHS of the chrysanthemum
exhibition at Davenport, Ia., last Novem-
ber, recently received, show that the Tri-
City Club had an excellent display of
really good plants and flowers.

G. M. P.—The cinnamon vine is usually
considered hardy but the temperature you
mention is extremely rigorous. The roots
bury themselves deeper every year and well
established plants will naturally prove
most completely hardy.

THE SPRAYING OF PLANTS, by E. G.
Lodeman, instructor in horticulture at
Cornell University, is a recent issue in the
Rural Science Series. It contains chapters
on materials and formulas used in spray-
ing, devices and machinery, the action of
insecticides and fungicides, etc., and will
be found of value to florists, as well as to
the outdoor horticulturists for whom it is
specially designed. (Macmillan & Co.,
New York. Price \$1.00.)

MR. WILLIAM FALCONER, for many
years superintendent of the Dosoris Gar-
dens, the country place of Mr. C. A. Dana
at Glen Cove, N. Y., for several years a
valued correspondent of the FLORIST and
later editor of *Gardening*, has resigned
his position at Dosoris, and has been
appointed superintendent of Schenley
Park, Pittsburgh. Certainly no more
thoroughly able man could have been
selected. His knowledge of horticulture
in all its aspects is of the broadest and
that he will make the Pittsburgh park a
model American public garden goes with-
out saying. We extend our hearty con-
gratulations to the city of Pittsburgh.

THE city of Brooklyn, N. Y., is to be
warmly congratulated upon having
secured Mr. J. A. Pettigrew as its General
Superintendent of Parks. His knowledge
of horticulture is remarkably broad and
this is happily combined with excellent
administrative ability. His ideals are
high and he is at the same time intensely
practical. His natural modesty and quiet
manner makes necessary something more
than a casual acquaintance before his
attainments are fully appreciated, but to
those who know him well he represents
the very best thought in American horti-
culture to-day, and we rejoice that he will
again have a position in which he will
have opportunity to do himself justice
and thereby further dignify and uplift the
profession of which he is so able an ex-
ponent.

WHEN writing to any of the advertisers
on this page please mention the AMERI-
CAN FLORIST.

The boxes as they appear when set up for use.

We make them in a sufficient number of sizes, including for violets, to meet all necessary requirements.

The Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

S. E. BRIGGS, Pres.; T. W. WOOD, 1st Vice-Pres.; ALEX. RODGERS, 2nd Vice-Pres.; A. L. DON, 114 Chambers St., New York, Sec'y and Treas. The fourteenth annual meeting will be held at Niagara Falls, N. Y., June 9 to 11, 1896.

VISITED CHICAGO: Henry A. Salzer, J. C. Robinson, S. H. Church.

CROCUS out of the ground in Kansas; peaches in bloom in Georgia; sowing lettuce and cabbage in the Ozarks; how is your mail trade?

NEW YORK—The seed trade awaits only better weather. All indications are for a fairly good trade. Dutch bulb men are here in large numbers; they quote prices on tulips even lower than last year. Visiting New York: Wm. Meggatt, S. F. Willard and E. B. Clark.

MRS. RICHARD FROTSCHER died at her home in New Orleans fifteen days after the demise of her late husband. This leaves the seed business of the late Mr. Frotscher in the hands of the daughter. Nothing has yet been done in regard to the management of it. It is very probable that the business will be offered for sale.

Government Seed Distribution.

PRESENT STATUS OF THE QUESTION FOR THIS SEASON.

On February 20 Mr. Willis of the House Committee on Agriculture, submitted the following report, to accompany Senate Resolution 43:

The Committee on Agriculture, to whom was referred the Senate Joint Resolution No. 43, submit the said resolution and recommend the adoption of same.

The committee believe that it is the desire of congress that the Secretary of Agriculture execute the law in the spirit in which it was enacted and are of the opinion that, notwithstanding the lateness of the season, it is still practicable for him to do so; that many (if not all) of the seeds, bulbs, etc., would be available for late spring or summer planting, and that, in some sections they would be in time for the regular spring seedling.

Referred to Committee of the Whole and ordered printed.

Catalogues Received.

Cushman Gladiolus Co., Euclid, Ohio, bulbs, plants and seeds; Van Zanten Bros., Hillegom, Holland, bulbs; Memphis Floral Co., Memphis, Tenn., plants and flowers at retail; Vilmorin-Andrieux & Cie, Paris, France, dahlias and cannas; Seawanhaka Greenhouses, Oyster Bay, N. Y., seeds and plants; Sunnyside Floral Nursery, Fayetteville, N. C., plants and shrubs; Wm. Preer, Columbus, Ga., chrysanthemums, cannas, etc.; W. Pfitzer, Stuttgart, Germany, seeds and plants; Webster Bros., Hamilton, Ont., florists'

stock; Wm. H. Harrison & Sons, Lebanon Springs, N. Y., nursery stock; J. P. William & Bro., Heneratgoda, Ceylon, tropical seeds; James Dell, Pittsburg, Pa., seeds, shrubs and trees.

Heating.

When I first put in steam several years ago I used two locomotive boilers running side by side, and they did their work very well. One of the boilers became played out, and I put in its place a return tubular boiler and connected them as before, the water level being practically the same in the two boilers. The work was done by a local steam fitting firm, and the new boiler generates steam all right, but it is impossible to return the condensed steam when there is two or three pounds pressure on. Last summer an expert steam fitter made some alterations, but the result is no better. Can any readers of the FLORIST enlighten me. I would be glad to furnish fuller details if necessary. DAVID CLIFFE.

Germantown, Pa.

Shipping Plants.

A number of shippers have been using the official cut flower label on shipments of plants to insure prompt delivery, evidently overlooking the fact that such shipments of plants may be billed as cut flowers and thereby be made to pay full merchandise rate and barring the recipient from receiving the special rate accorded to plants. The difference between these two rates is a considerable item and shippers of plants should be careful not to use the cut flower label on this account. A label stating the contents are plants and of a perishable character would insure ample speed in delivery and at the same time reduce the rate of freight on such express shipments.

NORTHAMPTON, MASS.—Jas. A. Fitzgerald, gardener at the State Industrial School, has resigned and will take charge of the greenhouses and grounds at Smith College here.

DAHLIA ROOTS.

Named varieties such as *Nymphæa*, *Camellæflora*, *Donald Beaton*, *Emperor*, *Golden Bedder*, *Golden Queen*, *Golden Pearl*, *Guiding Star*, *Little Fred*, *Little Rifleman*, *Madge Wildfire*, *Miss Dodd*, *Mrs. Daniels*, *Snowball*, *Viola*, *White Dove* and a hundred or more equally good ones.

Strong roots, in perfect condition, uncalled for stock, \$8.00 per 100.

Centaurea Margaret.

A VERY handsome plant which grows about 18 inches high, and produces large pure white flowers (our illustration represents one in natural size), of the sweetest fragrance. Being produced on long, stiff stems, the flowers are most admirably adapted for bouquets, vases etc., especially since they keep in good condition for a week after being cut. It is as easily grown as a Bachelor's Button. Pkt. (200 seeds) 25 cts; 1/4 oz., \$1.00.

Bright sunshine the past week had a remarkable effect on the flower supply. Lent has come again and will no doubt affect business as usual. Carnations are accumulating and prices have fallen considerable. Violets are a glut in the market. Roses begin to come better and more plentiful than for some weeks; they about equal the demand. Bulbous stuff moves slowly, with the exception of lily of the valley.

Market last Saturday was dull, owing to disagreeable weather. There was nothing new to be seen, except some well grown Azaleas sinensis and mollis on K. Schweizer's stand.

We visited Mr. R. Witterstaetter a few days since and found Dick up and around again attending to the general routine of business. Carnations on this place are in excellent condition, especially a house full of Emma Wocher, which he intends sending out next spring. This house alone is worth while going many miles to see. Two houses are devoted to seedlings and in those houses Dick spends most of his time. He has several of great promise, among them are three of special merit: No. 1, bright scarlet with strong stiff stem, healthy foliage, good calyx, as fragrant as Albertini and of free-blooming habit. He says this surely is a "charmer." No 2, a dazzling red. No. 3, a pure white, very large. All of these have been grown two seasons, many of the others would have been bread-winners a few years past.

Quite a number of florists will attend the Indianapolis carnation meeting March 4 and take a side trip to visit Mr. Dorner's place at Lafayette.

Saturday, March 14, meeting night, a full attendance is expected.

It has been rumored that Mr. Frank Boll, for several years shipping clerk at H. L. Sunderbruch's establishment, is to be married in the near future. Congratulations are in order. H. SCHWARZ.

NEW SEEDLING CHRYSANTHEMUM

MRS. ADELAIDE WHITE.

We have grown this for three years, and recommend it for exhibition, as specimen plant, or cut bloom. The *Florists' Exchange*, Dec. 7, '95, page 1190, said of it, "The flower is of the hairy Japanese type, the color is entirely different from anything we have seen in that class. The lower florets were deeply suffused with pink, the upper ones being a clear white color; the combination making a pleasing effect."

SEND ADVS. NOW
FOR OUR

Special Spring Number

TO BE ISSUED

MARCH 21.

Grand Rapids, Mich.

The Florists' Club held its regular meeting March 3 in the parlor of the Eagle hotel and will hereafter hold its meetings there, the first and third Tuesdays of each month, attendance good, discussions interesting.

The premium list for the chrysanthemum show next fall received earnest consideration, the main point brought out was, would it not be well to give each exhibitor a percentage of the premium list money, according as his exhibit compared with others; in this way the weaker ones would receive a percentage according to merit, where as premium lists are now arranged the underlings get little or nothing.

Mrs. Evelyn Arnold read an essay on the best method of growing the most desirable new sweet peas.

Silver Spray was called the best all around white carnations. F. A. Chapman exhibited his new pure pink carnation, a sport from Daybreak; it gives good promise of possessing commercial value.

Messrs. Crabb and Cross gave an interesting account of a visit to Geo. Hancock's greenhouses, Grand Haven. Hancock believes in growing medium grade of carnation, rather than fancy or culls.

EVELYN A.

Duluth, Minn.

Smith & Seekins have recently purchased the Duluth Greenhouses, formerly owned and operated by McComber, and are now putting the houses in first-class shape to supply the demand in this city and near by towns for house and bedding plants and cut flowers. They are also adding a show and rose house to the plant.

The recent cold snap made the coal bills big but we have had a milder winter than usual. Business has been very satisfactory. Roses are retailing at \$1 a dozen and carnations 40 to 50 cents a dozen. E.

Now is the time to send advs. for our special spring number to be issued March 1.

MT. PLEASANT, IOWA, 2-26, 1896

ALBERT M. HERR, LANCASTER, PA.

Crimson Sport Carnation.

This new carnation originated with us six years ago and has been thoroughly tried before offering it to the trade. Crimson Sport, as its name will imply, is a sport from Unique, which was a sport from Lydia. Crimson Sport has the strong, healthy growth of its parent, very large crimson flowers, free from rust and disease, very prolific, long stiff stems, perfectly healthy growth, a good shipper, a good keeper and all in all the best crimson carnation now in cultivation. We say this after growing it several years and comparing it with all the recent introductions and old varieties.

Having plenty of stock our cuttings will be taken from perfectly healthy plants that have not been forced or propagated to death, as is often the case.

Call and see it growing or send for carnation circular of this and other varieties.

ROOTED CUTTINGS, \$1.50 per dozen; \$10.00 per 100; \$60.00 per 1000.

J. L. DILLON, Bloomsburg, Pa.

NEW CARNATION, W. D. SLOANE.

This new sort will undoubtedly prove a leader to all Florists securing a good stock in time. We know of no better variety of its color, and none can equal it in fragrance. The plant is a strong and vigorous grower, needing but little support, with dark foliage about as heavy as Tidal Wave. Flowers are large, good substance and lasting qualities, borne on stiff stems 15 to 20 inches in length; color the same as the above well-known variety, a beautiful cerise. Very profuse bloomer, continuing to bloom late into the summer.

PRICE, \$10.00 PER 100; \$75.00 PER 1000.

PITCHER & MANDA, SHORT HILLS, N. J.

Carnation Cuttings CHEAP.

Having sold my property, dwellings, greenhouses, etc., which are to be torn down for railroad purposes, I offer and MUST SELL, at a sacrifice, the following: 75,000 Cuttings consisting mostly of **Wm. Scott**, Lizzie McGowan; also a few thousand **Portia**. All sorts at \$7.00 per 1000. Fine, elegant stock, well-rooted. Any amount Scotts unrooted, by mail cheap. All other stock in general. Rare Chance, for cash Order at once. Address

J. MARC, Woodside, L. I., N. Y.

HENRY A. NIEMEYER, Erie, Pa.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

Utica, N. Y.

Not since the memorable year of 1892 have the florists of Utica enjoyed such a prosperous season. The reports are indeed most gratifying, both the shipping trade and the local sales having been more than doubled in volume as compared with those of a year or two ago. Prices too have held their own, notwithstanding the few attempts made by some "to draw trade" by means of selling flowers for a song. Such attempts, however, were but of short duration. Choice roses sold readily at \$2, extra fine stock at \$2.50 and \$3, fair to medium at \$1.50. Carnations brought 50 and 75 cents; 50 cents for carnations and \$1.50 to \$2 for roses are the prices ruling at present.

Mr. Wm. Mathews, of orchid fame, is as usual a very interesting and highly entertaining talker on the subject of his favorites. A finer and more varied collection it would be hard to find among the commercial houses in the country.

During the past week Mr. Chas. F. Baker and staff were unusually busy, having had their hands full in turning out funeral work. Among other things a mammoth train, consisting of a locomotive, tender and baggage car, the whole measuring over twelve feet in length and two feet high, was one of the pieces ordered by some railroad employees for the funeral of a fellow workman.

Mr. Baker's houses are in splendid condition, and his roses and carnations have never looked finer. Among the latter there are several excellent specimens of seedlings, red, white and pink, all doing exceedingly well. Mr. Baker grows this season considerable bulbous stock, and among other things his house of Harrisii proving to surpass any of his previous efforts. It is the finest stock that I have beheld during my recent travels.

Mr. Frank Baker is on the sick list, being confined to his bed as the result of a slip and fall upon an icy pavement, sustaining some internal injuries in consequence.

Bay City, Mich.

The John Irvine Green House Co. operating greenhouses and an office in Bay City, and a store at 220 Woodward avenue, Detroit, has filed a chattel mortgage, running to James A. See, of Bay City, as trustee, for \$33,611.04, covering all personal property in Bay City and Detroit.

Of the total, \$17,000 is for extension of credit, and the balance for present indebtedness. The mortgage provides that the company shall have three years in which to pay its indebtedness. The company has a large tract of land in the heart of Bay City, and is reported to be abundantly able to pay all outstanding claims.

HORSE CHESTNUT TREES.

6,000 BEGONIA NIVEA,

AT REDUCED PRICES.

The New Everblooming Apple Blossom Begonia. We have a large stock of this grand winter blooming and summer bedding plant; it being covered with elegant panicles the whole year round, making it a valuable market plant. In color it is of a delicate pink when in bud, expanding through lighter shades to snowy whiteness when in full flower, giving it an apple-blossom appearance, that is unique, and what the ladies call "just lovely."

In order to make room, and to place in reach of all, we offer 6,000 plants only at reduced rates if ordered before March 1st, 1896, after which date, prices will be advanced. It is a most vigorous grower, propagates easily, and has come to stay. The plants are well branched, well established and first-class in all respects, and sure to give satisfaction. Up to date florists should secure some of this stock for their floral work.

We guarantee safe arrival in good condition, and extras added to all orders of one dollar and upwards by express. Cash with the order. 70 plants at 100 rates.

TREE AND PLANT LABELS. MAILING BOXES.

WILLIAMS & SONS CO.,

BATAVIA, Kane Co., ILL.

New Single Violet Luxonne.

This variety is of French origin and was introduced into this country some four years ago by Mr. Francois Supiot, the Violet expert of Philadelphia, otherwise known as the "Violet King." It has, as Mr. Supiot claims, become thoroughly acclimated, and is without doubt, the most profitable single Violet grown. It is of the same size as the California, but appears nearly double its size, as all the petals open out flat, and has the advantage of flowering continuously from early in September until April, and does not come in crops like the California. It is of a beautiful rich, but soft violet purple color, with strong stout stems from 9 to 12 inches long, and very fragrant.

Shown in competition with well grown flowers of the California at the New York Flower Show last fall, it was awarded the *First Prize*.

We can fully endorse Mr. Supiot's description of the above and also his claims that it supersedes all other varieties now on the market. **\$2.00 per dozen; \$15.00 per 100.**

New Red Violet, Admiral Avellan.

Another French variety with distinct reddish purple flowers, entirely distinct from anything yet introduced. **\$2.50 per dozen; \$20.00 per 100.**

We have been appointed **SOLE AGENTS** by Mr. Supiot for the distribution of his stock, and are now booking orders for delivery **EARLY IN MARCH** for well established plants from 2 1-4 inch pots.

News Notes.

JAMESTOWN, N. Y.—J. Hetherington succeeds Ross & Hetherington.

WAYNESVILLE, O.—Two greenhouses at Miami Cemetery were burned Feb. 20.

CUYAHOGA FALLS, O.—Mr. M. Crawford was quite seriously injured by a falling tree last week.

HENDERSON, KY.—The firm of Hart & Fuller has been dissolved, Mr. Fuller retiring. The business will be continued by A. B. Hart & Co.

MINNEAPOLIS, MINN.—The Lakewood Greenhouse and Floral Co. has been incorporated with a capital stock of \$10,000. The incorporators are T. F. Hartman, Frank A. and Christine Moldenhauer.

GREECE, N. Y.—The Vick & Hill Co. has been incorporated with headquarters here. The capital stock is \$15,000 and the incorporators are John Hill, Fred W. Vick and Edward T. Vick. The Company will grow and deal in seeds, bulbs, plants and nursery stock.

PITTSBURGH, PA.—Robert Ellis has leased for a long term the old skating rink property at the corner of Wyoming avenue and Montgomery street and will build a range of greenhouses there. He takes possession April 1. As the lease of his present place on Luzerne avenue does not expire for another year his salesroom will probably remain at the old place for some time.

LITTLE ROCK, ARK.—The Arkansas State Hort. Society has elected the following officers: President, S. H. Nowlin, Little Rock; vice-president, W. K. Tipton, Little Rock; secretary, Will L. Harding, Sweet Home; corresponding secretary, A. J. Carden, Sweet Home; treasurer, J. W. Vestal, Little Rock; executive committee—C. B. Davidson, J. H. Cherry, W. F. Blackwood, Little Rock; George P. Murrell, Austin; E. C. Kinney, Judsonia.

MILLS

HOT
AIR
PUMPING
ENGINES

A Windmill

Is unreliable because it depends upon the elements for its power; hydraulic rams also depend upon favorable conditions and waste as much water as they secure. Steam pumps require skill and hand pumps demand labor and time. The

DE LAMATER-RIDER OR
DE LAMATER-ERICSSON
Hot-Air

Pumping Engines

are especially designed for pumping water, and from shallow streams or any kind of well. They are simple, safe and reliable, require no steam and have no valves. They require very little heat to operate them, and can be arranged for any kind of fuel.

Send for illustrated catalogue to

Send advs. early, so we can have time
to set them up in our best style.

AMERICAN FLORIST CO.

P. O. Drawer 164.

..... CHICAGO.

New Notes.

DENVER, COL.—Mr. John L. Russell has been appointed chief of police.

ROCKFORD, ILL.—Wm. Melcher has sold his greenhouse business to J. J. Soper.

DEFIANCE, O.—Mr. C. Winterich has started in business here with an acre of ground and two greenhouses each 20x100.

NORWICH, CONN.—John Dentff, who for many years has had charge of the greenhouses owned by the late C. C. Brand, died on February 15.

PEKIN, ILL.—Geo. A. Kuhl expects to add 4 new greenhouses, 25x200, giving him a total of 40,000 square feet of ground covered with glass.

BURLINGAME, CAL.—E. W. McLellan has started in business here as a grower for the San Francisco market. He is building twelve houses 100x20 feet, to be planted in roses and carnations.

CARLISLE, PA.—Jesse Robbins is adding three new houses, one for roses 18½x50, one for carnations 18½x50 and one for violets 10x50, also potting shed and office. Plans and material supplied by Hitchings & Co.

MADISON, N. J.—The greenhouses of Chas. E. Cook were almost totally destroyed by fire on the afternoon of February 20. The houses were only erected last summer. The loss is about \$2,000, fully covered by insurance.

LOWELL, MASS.—The entire establishment of C. L. Marshall on Stevens street, comprising eight greenhouses, with their contents, was almost totally destroyed by fire on the morning of February 20. Cause of the fire unknown. There was no insurance.

MARYSVILLE, OHIO.—The Marysville Floral Co. has been recently established here, having bought the old Cunningham place, erecting four new houses, three 20x60 and one 20x40. Miss Jennie Coder is secretary of the company, having charge of the plant.

PLYMOUTH, MASS.—B. M. Watson, the well-known nurseryman, died on the night of Wednesday, February 19, aged 76. Mr. Watson was a gentleman who enjoyed the respect of his townsmen in the highest degree. He was the father of Prof. B. M. Watson of the Bussey Institution at Boston.

NEW BEDFORD, MASS.—Mr. M. Conroy will soon build at Fairhaven, just across the river from this city, a cottage house 33x22, with all modern improvements, a greenhouse 28x225, potting house 25x18 and barn 18x25. The total cost will be about \$3,500. Mr. Conroy's store is at 144 Purchase street, this city.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipfle Dopfel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Dopfel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.

Send for price list and samples and we know you will give us an order.

JOHN C. MONINGER Co.
297 to 307
HAWTHORNE AV.
CHICAGO, ILL.

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafter, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

SPRINGFIELD, MASS.—Rev. W. T. Hutchins delivered an entertaining address on floriculture as a popular art before the Amateur Horticultural Society on Mar. 6.

HAVERHILL, MASS.—During the recent storm and freshet the city greenhouses, which are located on the banks of the Merrimac River, were inundated and the contents ruined.

If you have not already sent your adv. for our Special Spring Number mail at once or you will be too late.

NEXT WEEK comes our annual special spring number.

Carnations in the Exhibition Hall.

Why is the carnation so short lived in our exhibition halls? Experience with the displays made at the meetings of the Carnation Society and elsewhere during recent years has been such as to cast grave doubts upon the title of the "divine flower" as now grown, to its old time reputation for being among the longest-keeping flowers after cutting. Abundant evidence may be found, however, if a little experimenting is indulged in, that the life of the carnation flower depends greatly upon its surroundings, and that under favorable conditions it may still be kept in good condition for days and even weeks. Blooms placed upon the parlor mantel for instance, will sometimes look well for a fortnight, while flowers of the same variety picked at the same time and displayed in the store or exhibition hall may be found "fast asleep" inside of twenty-four hours. What is the cause? Below we give the views of some of the leading carnation growers on this vital question, also a few opinions from retail dealers upon the same subject.

My attention is called to the disappointing feature in the carnation of going to sleep when on exhibition. This curious feature is to me an enigma, a physiological conundrum. What is the cause? I study over this problem and when I think I have arrived at a solution, there are unexpected developments that upset my whole theory. I was much surprised last fall to see the flowers on well grown plants go to sleep as soon as the cut blooms; I credited them with more resistance to this mysterious influence. These contradictory observations, especially about gaslight, are indeed very perplexing, although there is no doubt that the gaslight has a great deal to do with the mischief. May not the fumes of the gas, the moist breath of the people, combined with the evaporation from plants and vases, rise to the ceiling, and settle down through the calm of the night? Generally when our exhibitions take place nights are cold. The exhibition room, moderately warm for the comfort of the visitors, is considered too warm for the flowers and heat is shut off after closing in the evening, and considering the welfare of the tender plants on exhibition and for decoration, everything is kept closed. The gradual cooling and calmness of the room will allow the poisonous gaseous

vapor to descend. I think if the exhibition room could receive a thorough ventilation after closing at night, it would be much to the benefit of the cut blooms and every other thing. Cut blooms subsist entirely on moisture, absorb moist air eagerly. A plant has the power to discriminate in the selection of nourishment through the roots, but has no more power than we have regarding air.

FRED DORNER.

Why do carnations close so soon after being exhibited at our shows? The reason for such conduct on the part of nearly all varieties of carnations at times is very difficult of determination and is one of the very annoying circumstances in connection with carnation exhibits. I think, however, that one of the principal causes is the impure atmosphere of many of the rooms or halls where exhibits have been held, especially in this case where rooms are lighted with gas and where there is deficient ventilation. We all know that over-heated rooms are especially destructive to carnation blooms, and if in addition there be escaping gas the trouble is intensified. I never could understand why nearly all well known sanitary rules are set at naught at our flower shows. Plenty of good pure air is as essential to the keeping of our carnation flowers in a perfect state after being cut as the same constituent is necessary to preservation of physical health. Where electric lighting has been used for illumination of the room, the complaint of the unsatisfactory keeping qualities of our carnation flowers has seldom been heard.

My observation has demonstrated that blooms of the same variety exhibited under, apparently, the same environment would in the one case remain perfectly fresh for a length of time while in the other case their petals would close almost immediately on their being exposed; where such results obtain it would seem conclusive evidence of a lack of vital force in the organic development of the flower itself; to the eye, however, when cut from the plant, it showed all the qualities of a perfect flower, but it would not close and wither unless there was lacking some inherent property indispensable to its keeping qualities after being cut. Observation teaches that plants soon after being lifted in the fall and before root action is again thoroughly established produce flowers that soon bury themselves in sleep after being cut, and just in the measure we obtain normal, well developed flowers through healthy root action just in such measure as the root action proves vigorous and normal, are the flowers perfect in texture and tissue, and capable of maintaining their form and charm after being cut.

Over-stimulating the plants by gross feeding with unsuitable manures and

chemicals tends to enervate and weaken the plants; under such conditions the plants produce flowers lacking the qualities of durability. Where fertilizing is carried to excess and without discretion the invariable result is a weakening of the plant and a consequent lack of vital force which would necessarily render the blooms liable to go closed soon after being cut.

The susceptibility of not a few varieties to close their petals under favored growth and cultural development proves that certain varieties lack the inherent qualities requisite to produce good bloom which will stand after being cut. There are varieties that fail to maintain a proper development of the bloom on the plants, this then must be an organic defect which cannot be remedied by the most careful cultural skill. The only safe course is to avoid all such varieties. A too close atmosphere, lack of sunshine, over heated greenhouses, the undue withholding of fresh air all tend to undermine growth and weaken tissue, consequently we have flowers lacking force and vitality. This is a cause which can be remedied by intelligent, careful culture.

The theory advanced by Mr. Dorner in a recent article attributing the self pollination of flowers—or rather their accidental fertilization—when grouped in bunches, has much to do undoubtedly, with the sleepiness of carnations after being thus handled. All students of plant life will have observed the almost universal law governing the action of flowers after fertilization, their functions having served the end for which they were formed they invariably wither and cease to be present further as active factors. Undoubtedly this has something to do with the fleeting character of many carnations which so quickly lose their charm of color and form.

The above theorizing may be in the line of a solution of our trouble with our carnation blossoms at exhibitions and shows, or it may possibly tend to mystify the subject to a greater degree—be that as it may your correspondent believes there are grains of truth which may be helpful.

E. G. HILL.

The poor keeping qualities of the carnation as an exhibition flower has occupied a great deal of my attention. So far I have not been able to solve the problem. The only way would be to make a comparative test. For some time I have held to the idea that carnations would be better in booths, fitted up for that purpose. It would, of course, involve a great deal of trouble and expense, but I would like to see a trial made carrying out this idea at the forthcoming meeting of the American Carnation Society; on a small scale, of course, for the purpose of making the test. It would be an excellent idea, I think, for the American Carnation Society to offer a premium for the best device for exhibiting carnations with the view of prolonging their keeping qualities.

The trouble seems to be equally as bad whether the lighting is done by electricity or by illuminating gas, so that we must look to some other cause than that of the unconsumed gas, which will escape when this is used for lighting the buildings in which the exhibitions are held. Quite a number of experts have passed their opinions upon this matter, but comparative tests in the way of experimenting are needed at the present time in order to get at the bottom of the difficulty, and now is a good time to take the matter in hand.

EDWIN LONSDALE.

Probably the chief cause of carnations not standing up better at exhibitions is because exhibitors make an effort to show the *largest* flowers that can be produced. Consequently the majority of blooms are over-developed and already on the decline before being placed on the tables. The same thing would occur if roses were staged blown to their fullest size.

Carnations cut at the proper stage of development the day before being staged and placed in vases of pure cold water in an above-ground room (no ice) held at 40° to 50° and staged the next morning should stand two to three days provided the exhibition hall is not so permeated with ammonia, gas, foul air or so exposed to sharp draughts as to destroy the flowers.

Keeping the houses too close and moist in order to develop large blooms also tends to destroy the keeping quality of the flower. To the desire to produce large blooms, and to imperfect methods of growing and handling the flowers may likely be charged the bulk of blame for short-lived flowers. The balance belongs to improper exhibition halls.

When shipping flowers we always keep a few flowers of each day's pick as a check on complaints of our flowers not keeping, and frequently we find the blooms remain in good condition two or three weeks.

C. W. WARD.

In my opinion the trouble is to be found in the fact that we let those carnations wanted for exhibition mature too long on the plants. Everybody who grows carnations knows that to be successful as an exhibitor the main point is to show carnations as large as possible and to procure them large enough we are compelled to let them remain on the plants to develop to their fullest extent.

I will cite an instance which I think will bear out my assertion. Last Christmas my wife wanted some carnations for the dinner table. To procure these I took half of those that had been on the plants ("held back" as you call it) for about a week. The other half I picked were only three-quarter developed, or in other words flowers that would hardly pass for A1 carnations in the New York market. After being on the table twenty-four hours, the full developed or large carnations were all closed up (gone to sleep) but the half-opened ones remained nice and fresh almost for the whole week. I think if any of your readers will try the experiment they will come to the same conclusion. But how to overcome it for exhibitions I don't know, for we cannot be expected to show half or three-quarter developed flowers at exhibitions, surely.

E. ASMUS.

I am afraid I can throw very little light on the subject. I can of course testify to the fact that blooms will keep for at least a week in our sitting room or parlor but similar flowers placed on exhibition will fade in a day. We know that some varieties will keep longer than others, and on examination it will be found that the ones that go to sleep the soonest are those that make seed the easiest. A flower that is fertilized goes to sleep directly. Still this does not to my mind entirely explain the matter, for flowers that in ordinary conditions of trade are good keepers hardly stand up a day at an exhibition. Many theories have been advanced to account for the fact which it is needless to repeat here, but I think I can safely say there is no explanation so far that promises to lead us out of the difficulty. A florist friend the other day remarked to

me that flowers kept longer in his kitchen than the other rooms of his home. The dampness and steam always present in a kitchen he thought aided their keeping qualities. If this is the case would it not be a good idea to take means to secure a damp atmosphere in exhibition rooms?

W. R. SHELMIRE.

To have carnations in good shape for exhibition purposes they should be grown somewhat with that object in view. In the first place they should be grown cool so as to have plenty of substance both in the stem and the flower; in the second they should be plucked before they are fully developed and allowed to develop in the water in which they are placed; if this is followed out and the flowers put in a cool clean place over night away from the exhibition hall they should be a bit better the second day of the exhibition over what they were the first.

It would be folly to attempt to have a carnation show of more than two days' duration, as there seems to be something in the atmosphere created by a crowd that is absolute poison to the carnation, but if the air is completely changed or the flowers taken to a fresh cool room they can be had in good condition on the second day.

ALBERT M. HERR.

The tendency of carnations to "go to sleep" so early after being placed on exhibition is certainly unfortunate, but so far as I know it remains an unsolved problem. I believe the absence of some gases in the air to be the chief evil. We can put blooms of carnations in our shed, which is exposed to draughts, dust and great changes of temperature, and with always the same result with all varieties, that they will keep in good condition for a week and sometimes for twice that time. We find equally good results in the dwelling house, provided they are not in too warm a room.

EUGENE DAILLEDOUTZ.

My opinion is that the rage for large flowers is one of the causes of carnations going to sleep at exhibitions. Disbudding makes both flower and seed pod more fully developed, also the pistils, and more and better pollen which as the flowers are cut and handled two or three times is shook upon and fertilizes them. Another cause is the warm and very poorly ventilated rooms. It will be noticed that flowers in the spring and fall always keep well before people begin to heat their houses. I have no trouble in keeping carnation blooms from six to twelve days in a cool room where the thermometer will stand about 42° nights and 55° day time, providing they are not handled much. Another reason why they do not keep at the present day as well as they have done in the past is I think that we used to always pick the center flower short stemmed and then waited for the next two or three buds to open before picking long stemmed blooms which if you will notice hardly ever have any well developed pistils. These are some of the causes which I think account for the poor keeping qualities of carnation blooms.

WM. NICHOLSON.

Our experience is that under proper conditions the finer grown and fancy carnations keep about as well as the older sorts used to. Possibly the finer varieties require a little more attention, fresh water and air, clean vases, etc., to keep them in best condition. They need extreme care and attention in growing, and

CARNATION HOUSE OF MR. JAS. C. MURRAY, PEORIA, ILL.

you must continue it after they are cut, if you want good results. We find we cannot keep them in our cellar at store, although we used to think it was one of the best places to keep flowers. They lose color and close up; to use a trade expression are "sleepy" after one night's exposure to air of cellar, nor do they keep well in refrigerator in store, though much longer and better than they do in the cellar. We have found carnations to keep best in a close box out of doors. We have such on our greenhouse roof, back of store, covered well to keep them from freezing or with door partly opened into greenhouse in very severe weather; can keep many kinds in good condition for a week in these boxes. Have just examined a vase of fancies that are in good condition, though some of them came in three or four days ago; the older ones just beginning to show the effect of several day's keeping. Have also kept them well in empty room in house, atmosphere rather dry with no fire heat.

Some varieties keep much better than others. Have found that most of the smooth-petalled varieties close up quicker and lose their fresh appearance sooner than the fringed ones. In our experience have also found that carnations last better in fall and winter months than they do in the early spring months. Flowers seem to be softer and not of as much substance after the weather gets warm and the plants commence to grow freely. We have handled carnations largely in our retail trade for many years, and the above is about our experience up to date. Have tried many plans, but the close box in open air or shed has been the best for us.

Philadelphia.

PENNOCK BROS.

The reason why carnations go to sleep or keep so poorly after being cut and put on exhibition is the poisonous or impure air with which they are surrounded. I have seen them put in some buildings and after remaining for a week come out apparently fattened or improved in appearance; in other places they close up and are unfit to look at inside of twenty-four hours. I have found from years of experience that where there is little or no illuminating gas used is the place for carnations; they will keep in good condition in any temperature from 35° to 75° pro-

vided the water and air are sweet and pure.

The firm of which I was a member for a good many years, after trying to find a suitable place in their large cellar and store to keep their carnations and violets were obliged to fit up a place out-of-doors, running the risk of frost and changes of temperature, and putting up with all the inconveniences for the sake of getting away from the gas that found its way from the sewer traps, street, or next door. They have found it a good paying investment, being able at all times to give their customers carnations that are wide awake and have not the tired, sleepy appearance of so many that are handed over the counter or seen at our shows. There are plenty of conservatories in Philadelphia with good exposure, well-heated and properly looked after, where it is impossible to keep a carnation or geranium plant in bloom during the months of December and January, when the weather allows you to give very little ventilation. I have seen good healthy plants of both kinds in bloom put in and go the way of the cut ones, asleep or closed up in twenty-four hours, never to awaken or open another flower, unless they were taken to other quarters. I do not know how to overcome the evil entirely, but I would advocate holding flower or plant shows in buildings that are lighted by electricity and properly ventilated. This I believe will go a long way towards overcoming the trouble.

Philadelphia.

JOHN WESTCOTT.

Answering inquiry of recent date, I would state that my experience with the fancy carnations has been very discouraging and similar to that of others. I have found that they have a tendency to shrivel up, if not sold the same day that they come in, although my store is light, well ventilated and very cool. The only reason I can ascribe for it, is that they are forced in too intense a heat.

GEO. M. STUMPP.

Mr. Murray's Carnations.

The accompanying engraving gives an interior view of one of Mr. Jas. C. Murray's carnation houses, Peoria, Ill. The photograph and liberal bunches of flow-

ers of each of the varieties represented in the picture were sent us by Mr. Chas. Loveridge, manager for Mr. Murray.

Those on the left bench in the picture are Portias, on the left side of center bench Scotts, right side of center bench Silver Spray, and on the right side bench Daybreak.

The flowers sent us of these varieties were all excellent and the Portias were specially good.

The carrying of a large legible label on each variety, as seen in the picture, must add very materially to the interest of the house to visitors and possible purchasers. We commend this feature as of decided value to growers who retail their flowers and whose houses are visited often by possible buyers. It is good policy to put your customers on familiar terms with the flowers they buy.

Carnation Notes.

With the recent carnation exhibition one is reminded again, of the going to sleep of the exhibition blooms and one remembers too that commercial flowers sometimes do the same thing in the hands of the dealer. In some of my notes some time ago I called attention to the danger of well developed flowers being put to sleep in the course of handling, packing, and thumping of the packed boxes, by shaking the pollen onto the pistils causing fertilization, and the closing of the petals, going to sleep. I had some complaints from some of my customers and they thought we left our flowers too long on the plants. Acting on their supposition we cut them younger, and subjected them to a longer stay in the water in our flower cellar before shipping, they proved better keepers, but were hardly as large blooms as when they develop more on the plant. This set me more to thinking over the matter, and by a closer investigation I came to the conclusion that carnations should be cut before fully developed, some varieties when rather young (that is before their sexual organs are fully developed), and set in water in a cool place for 24 hours before shipping or selling. Now most everybody will do that, as far as the placing in water is concerned, and would hardly need to be told to do so. But has everybody thought of and investigated what is effected by this procedure?

We grow our flowers in an average temperature of 60°, counting day and night. They could be grown in a temperature of from 45° to 50°, but would require more time and be therefore less profitable. The even development of a bloom consisting of ovary and pistil, stamen and pollen as the seed producing organs, and the calyx and petals grouped around them, requires the temperature first mentioned, 60°. In a lower temperature the seed producing organs will cease growing, and when too low may receive a check making them incompetent. Calyx and petals, more of the nature of the leaves, will continue their growth in a lower temperature. We do not want the seed, for if a fertilization is effected the petals will close up at once to protect the tender ovary. We want the flower, calyx and petals, color, size and form. Ovary, pistil and stamens forming such a small part, are not considered in a commercial flower, but without them, the heart and life of a bloom, petals are impossible.

So our aim is to encourage an even development of all parts in an average temperature of 60°, cut the blooms before fully developed, place in water in a temperature of from 45° to 50°. This lower

temperature will check the growth of the seed-producing organs, but is sufficient to continue the growth of the petals, and more, to direct the nourishing elements contained in stem and leaves to the growth of the petals, that in a higher temperature would be all absorbed by the seed-producing organs. If the flowers are kept in a still lower temperature, say 40° and below, action, the moving of the sap, absorbing water at the cut, will stop entirely, and if the air is dry they will wilt standing in the water. So too low a temperature is just as detrimental as too high a one.

Not less important to the cut bloom is the water it is placed in; this will necessarily attain the same temperature as the atmosphere. Water is absorbed at the cut by the severed cells in the stem, a fresh cut every other day will much promote the absorption of water, and help to keep a better balance between evaporation and absorption, as also a cool moist air will do, by causing less evaporation. Flowers cut with too long stems, cut down in the woody part of the plant, will not well absorb water, hence this impairs their keeping. Wm. Scott and Albertini will not produce seed, and can be left longer on the plant without impairing their keeping quality; but should not be mixed with other varieties, as their pollen is very productive and may be instrumental in putting others to sleep.

Gone to sleep! How much that phrase implies; how the carnation grower dreads it. When the blooms are dead or dying exaggeration comes to an end too. But there is to some extent an exaggeration with this phrase. We all know going to sleep means dead. But when this phrase as we understand it, is used on varieties, that in their form have a curved, wavy or crimped appearance without the least show of relaxation in their petals, it is an exaggeration and an injury to such varieties. I had among my seedlings varieties of this character, beautiful and noble in form, being just as good keepers as any variety, but would hardly dare to bring them before the public, without having them pronounced as being sleepy. And this all because a carnation bloom in its last stages will close up the petals, like many other flowers, only going to sleep, and not drop or wilt. This is why the straight petaled varieties are more in favor, although they appear more formal and stiff. The star shaped angular form of Lizzie McGowan is excused, while there is much complaint of Alaska and other varieties opening in a curly crimped way.

FRED DORNER.

Arsenical Solution for Rust.

Kindly correct the prescription for the making of the arsenical solution for carnation rust, it should read:

"Arsenic acid C. P., 616 grains; Bicarbonate potash (not bromide), 1236 grains; water, 4 ounces. Heat to make solution; add water to make the mixture measure 5 ounces; use 1 ounce to 8 gallons water. Be careful not to inhale the fumes when heating and mixing."

The mistake occurred in the indistinct writing of the abbreviation by the druggist. H.

AN ITEM has recently been making the rounds of the daily press to the effect that Messrs. Hopp & Lemke, of Grand Rapids, Mich., had sold their new carnation Morello to a New York florist for \$10,000, quite a comfortable price. In response to an inquiry Messrs. H. & L. write as follows: "Referring to the item regarding

our carnation must say it was news to us. We did not know of the sale until we saw the item in the daily papers."

Rose Notes.

Hybrids that are expected to be in bloom for Easter should now have the buds half developed; if they are a little late it will be good policy to increase the temperature so as to hurry them along. A night temperature of 60° will not hurt them for a week or two, in fact it may improve them by lengthening out the stem, and in these times the length of stem counts for just about as much as size of bloom when offered for sale. The demand for hybrid roses after Easter is usually light and prices are seldom remunerative, hence the importance of having them in the nick of time. Plants in pots, boxes or on benches the crop from which has already been cut, should have immediate attention; if in pots and they are good enough to run another year, they should be turned out of the pots, the ball reduced about one-half, and be repotted into fresh rich soil, in well drained pots of the same size as those they previously occupied. It is important that the repotting take place immediately after the crop is cut off, there is usually very little foliage on the plant at that time, consequently the check received by disturbing the roots is very slight, but if the work is neglected for three or four weeks, there will be a lot of soft young growths to wilt and exhaust the plant, or else they must be cut off and lost. If the plants are in boxes and are in good shape they will run all right the second year without being disturbed, the same if in benches. The opinion prevails in some localities that such roses as Brunners and Laings should bloom only once, and then be replaced by young stock, but it seems to me that this is a very short life for a hybrid rose, and as far as my experience goes I think that with the proper treatment they are good for a number of years; it always happens, however, that a good many plants in the center of the bench fail to start off as quickly as the rest, and soon get smothered with the larger and stronger ones, so it becomes necessary each time they are rebored or benched to discard all the weakly ones and replenish with young stock.

Those making a specialty of the spring plant trade, and who grow a number of hardy roses for this purpose, should now bring them from the cold frames and place in gentle heat; in pruning such it is found best to cut them hard back, as they then break much stronger and make a nicer shaped plant. To be right for Decoration Day they should have about ten weeks, a night temperature of 45° to 50° to start them in will be found the best. In order to make room for the extra Easter stock we are often compelled to throw out a bench or two of Tea roses much to our regret probably, unless we chance to have a batch of consumptives somewhere, then of course we are glad for an excuse to pull up stakes and say "good bye." If however, the plants are healthy and not too large and are of the right kinds, they or part of them may be

potted into 6-inch pots and will make very good salable plants for Decoration Day. I have observed that these make much more satisfactory plants than any that are started this season; Meteor, Kaiserin, Testout, La France, Mme. Hoste, Bon Silene and Papa Gontier all answer very well for this purpose.

If it is necessary to put in more cuttings of any of the Tea roses the sooner they are got into the sand the better. All young stock should be kept moving, checks caused by standing too long in small pots often prove disastrous to the best of plants.

In the rush of spring work when we find several jobs waiting for each pair of hands, it doesn't pay to neglect the plants in the benches, rather than do this it will be economy to hire more help; the result of neglect will be greenfly, red spider, etc. Feeding must be attended to regularly if the best results are expected. Those planted early in the season will be greatly benefited by having a top dressing of half soil and half manure, the latter well rotted, fresh manure is ten times worse than none at all. Where it is difficult to procure the right kind of manure at the right time we may use as a substitute sometimes to good advantage wood ashes or soot; as a top dressing it may be applied at the rate of from 100 to 150 pounds to every 1,000 plants. If a considerable quantity of bone has been put into the soil earlier in the season it is hardly possible that more will be needed at this time, for this reason I would recommend a fertilizer rich in potash rather than one the principal ingredient of which is phosphoric acid.

ROBT. SIMPSON.

Short-Span-to-South for Rose Growing.

What is the general opinion of short-span-to-the-south houses for rose growing? Is it a success or are the old long span to the south better. SUBSCRIBER.

Among rose growers the prevailing opinion seems to be in favor of the regular three-quarter span house; for myself I am unable to state which I prefer at present, after another year's experience and observation my preference will probably be more decided, one way or the other. One thing is certain, we have cut just as good flowers, and have just as fine plants in the short-slope-to-south houses as in those of the other kind, on the other hand I think the space inside the house can be utilized more fully, and the plants receive their full share of light, air and sun all over the house more completely in the three-quarter span house. It has been claimed for the new style as a great point in its favor, that a block of houses can be built together, with only gutters separating them, without any risk of one shading the other, if this were true it might be worth a good deal to those who are cramped for space; but the fact is these houses shade one another very considerably during the short days of winter, too much so to make them entirely satisfactory for rose growing. There is a little saving, however, in space required, for while a set of three-quarter span houses must stand apart 20 feet to prevent shading the same result is obtained with an allowance of 10 feet between the short-slope-to-south houses. The difference in cost of construction between the two kinds of houses is trifling; it will require about as much glass for one as for the other, the only saving being about three feet in the length of the posts on the north side and a corresponding amount of

MOVING A TREE IN FULL LEAF IN AUGUST—PARIS.
THROUGH AMERICAN EYES.

sheathing and weather boards in favor of the new style house.

My ideal house built on the short-slope-to-south plan, would be 22 feet wide, the sides 5 feet above ground line, with a 10 feet 3 inches rafter on the south side at an angle of 45 degrees, while the north rafter would be 15 feet 6 inch long at an angle of 32 degrees. Ventilators at the ridge should be on the north side and opening from the top, also ventilators 30 inches deep on both sides. The arrangement inside the house would be one solid bed in the center, leaving 30 inches all round the sides for the main walks, the bed should be divided into three by making two paths 15 inches wide, this would leave three beds, each about 5 feet wide; the one on the south side should be raised 21 inches above the path on the outside, the center bed six inches higher, and the north bed six inches more.

To keep the beds from becoming cold and wet they should have a good foundation of loose stones, and each one should have a 2-inch hot water pipe running through the stones to give a mild bottom heat. One or two heating pipes should be arranged on the side of each center walk and and the rest come under the ventilators on the sides of the house. This style of house has given and will continue to give general satisfaction.

ROBT. SIMPSON.

Bride Failing to Bloom Freely.

H. F. D., New Hampshire, sends a Bride rose plant dug out of the bed for examination; the plant with others was growing in a house with carnations in solid beds, in a night temperature of 50° and day temperature of 60°, plants have failed to make any satisfactory growth, and have produced no good flowers thus far.

The plant arrived in a very fresh condition; the roots showed traces of cell-worm, but not enough to interfere with the growth and healthfulness of the plant to any great extent. The foliage was all disfigured with mildew, a good deal of which was fresh and active, and the ends of the shoots were each covered with green fly; these two pests allowed to have such a grip on the plants are well able to stunt and hold them completely

in check without any help from other sources. Would advise H. F. D. to give the heating pipes a good coating of lime and flowers of sulphur as a cure for mildew and to either fumigate three or four times in succession or lay tobacco stems on the steam pipes, or along the sides of the paths, to get rid of the green-fly. The chief trouble, however, I think, and the one that has helped to aggravate the others, is the low temperature; roses will not thrive in a night temperature lower than 55° and most kinds prefer from one to three degrees more heat than this. The plant received had the stunted appearance that Tea roses generally have when grown too cool. If H. F. D. will increase the temperature of his house to 56° at night, and give air at 65°, increasing the amount of ventilation as the temperature rises until in the middle of the day with a bright sun his house runs up to 75° to 80°, I feel sure it will not take long to start his plants into a better growth. The extra heat will not harm the carnations in the east, on the contrary it will prove beneficial. One or two waterings with lime water used at the rate of one peck of lime to 50 gallons of water may sweeten the soil and help the root action; a little nitrate of soda sprinkled on the surface (say about two pounds to 1,000 plants) same repeated once in two weeks, would help to give them a start.

ROBT. SIMPSON.

White Rambler Rose.

Replying to the inquiry by W. E., the above named rose is really in existence. It was raised two years ago and was a true sport from the White Pet; it was not from Felicite Perpetue as W. E. thinks it may have been. It will be exhibited in London next spring.

Through American Eyes.

PARIS.

Much has been said and written of the French, and more particularly of the people of Paris; of their skill in everything pertaining to art and architecture, and certainly their wonderfully beautiful public and private buildings, their magnificent galleries full of the most beautiful

paintings and other works of art, together with the fact that the Parisiennes are the acknowledged leaders of fashion, all go to show that the French are a truly wonderful people. With all these evidences of refinement and taste it was expected that here would be found the greatest development of nature's natural adornment, beautiful flowers. In this respect however the expectations of the visitor are not realized.

Whether it is because of the proximity to the warm climate of the South of France making the forcing of flowers in greenhouses unprofitable on account of the competition of the outside stock, or from some other cause not apparent, the high culture of cut flowers particularly is not to be compared with what one sees in the vicinity of the large cities of the United States. In fact there are few if any large establishments where the growing of cut flowers or plants is carried on about the city of Paris. Belgium supplies the palms and many of the orchids, and no roses or carnations are forced under glass for cut flowers. There are numbers of gardeners in the outskirts of the city who do business on a small scale growing plants in frames, which they bring to the markets at the Church of the Madeleine and along the Seine near the Cathedral.

The Church of the Madeleine is a very large structure, and the wide pavements on either side have been set apart for the sale of plants and cut flowers. A regular market is held three days of the week and every other morning a few regulars are to be found principally with cut flowers, or rather bouquets, for that is the way the street flowers are generally offered. The market is held under movable sheds or awnings which are erected over each side of the pavement, leaving a wide aisle down the middle. These sheds are removed as soon as the market is over. At the time of our visit, the third week in August, the stock of potted plants consisted of a few palms and ferns and quite an assortment of plants in bloom. There were some well grown fuchsias, *Lilium album* and *roseum auratum*, *Hydrangea paniculata* well flowered, perennial phlox, ericas in variety, only fair however, dahlias in pots, asters and chrysanthemums, these latter being the small flowered *Le Neige* and other varieties very dwarf, they seemed to have been grown in small pots and put a number together in larger ones. *Bouvardia jasminoides* seemed to be a favorite and was well done by several growers. Very full 6-inch pots of *tradescantias* were seen, and there were pots of oleanders and hibiscus. There were a number of small baskets of geraniums and other plants, each of one kind, which looked pretty and salable. Tuberous rooted begonias were to be seen, but nothing extra. There were quite a few pretty roses, *Aimee Vibert*, *La France* and *Capt. Christy* being among the number.

There were quite a lot of bouquets made up on some of the stands, gladiolus, lilies, asters, roses, *mignonette* and phlox were the flowers mostly used; they were generally set in a cornucopia of white paper. On many of the street corners there are flower stands not next to the wall but on the extreme corner of the pavement in a little permanent house probably four feet in diameter and generally round; these are mostly managed by women. Some women have a little push cart piled high with flowers. Some fakirs carried a sort of pannier on their backs from which they sold. They all seemed sharp and quick to notice and very eager to sell.

The Halles Centrales, or central market

is a busy place from 5 to 8 in the morning; it is where the stores of Paris obtain their stock of all kinds of marketing. There are two very large structures occupying probably 300 feet by 150, with a wide wagon way down the center of each. From this central passage wide aisles bordered with stalls crossed the building on either side. Outside the buildings on all sides was a wide open space or street, which when the market opened at about 5 a. m. was entirely occupied by the poorer class of gardeners and florists who could not afford to rent stalls. As one approached the market and when quite a distance away men and women would be passed carrying huge baskets on their heads or shoulders containing all sorts of marketing. It seemed remarkable that they were able to carry such a load and pilot it through the crowded and narrow streets, such as were seen as one neared the market. It seemed impossible for any one to shoulder such a load without assistance. When within a few blocks wagons and push carts were drawn up on the sides of the streets and porters from the market were busy delivering purchases. Everything has to be carried out by hand, or head and shoulders rather, as it would have been impossible to get even a push cart or barrow along the packed streets. It reminded one of the crowds on the principal thoroughfares of any of our large cities on election nights. When the large public space about the markets is reached it is a grand scrouge and push first this way and then that while all about you the excited buyers, and sellers are crying out in their efforts to get the most they can for their goods and money; it seemed to us a perfect imitation of Babel. There were quantities of tomatoes all in small handle baskets and a great deal of other garden produce all in small lots as if from small growers. Large quantities of outside or field grown flowers were to be seen, all being sold apparently by the people who raised them. Asters, stocks, gladiolus, dahlias, pink candytuft, perennial phlox, and some roses were the principal flowers. The absence of sweet peas was noted; not a spray was to be seen, and very few pinks. Most of the bouquets arranged were of the regulation market style, flowers crowded together with no idea except to make it large enough to look a good deal for the money.

Inside the building there seemed a better class of flowers and some good specimens of Brunner, Magna Charta, Paul Neyron and La France with quite long stems were seen. Orange blossoms without stems lying out in little heaps on paper were waiting for buyers. One of the aisles was filled on both sides with people apparently doing a retail business. In addition to cut flowers and bouquets they had large stocks of bead designs mostly in the form of wreaths. These piled up and extended into the aisle so that there was scarcely room to get around. A number of porcelain wreaths were made up of such natural looking flowers that at a little distance one quite noted A. F., on being asked to select the natural, picked out the artificial and would not be convinced of his mistake until he had made a close inspection.

At 7:15 a. m. a bell is rung and as the outside market must be over by 8, such a hurry and scurry takes place to get cleaned up; large push carts come in and all the refuse is gathered up, and by 8:15 all evidences of the outside market is gone. Should any salable stock be left over it is sold at auction for the benefit of the poor. The porters use large baskets

about three feet by five, which they rest on their shoulders and back of their heads, using a kind of crescent shaped yoke or cushion which fits over their forehead and is quite full where it lays on the back of their necks. Others have large panniers, which they carry on their backs by means of shoulder straps and another contrivance used largely is like a small ladder about six feet high with a platform at the bottom; this is also carried on their backs, and a man carrying this can easily push along through a crowd with quite a load.

The Jardin des Plantes was quite a disappointment; there may have been some things to admire, but if so they were overlooked by those who were looking for them. Plants without labels are had enough, but labels without plants are worse. The large conservatories were closed to the public at the time and may have contained something noteworthy.

The cut flower stores of the city were a disappointment; there were several quite pretentious places where there was considerable taste displayed in the arrangement of their windows. Several were set back from the street line some three feet so as to leave room for outside show. All the principal stores had baskets of growing plants, mostly foliage, tastefully arranged and plentifully bedecked with ribbons, in fact no basket seemed complete without its bows and streamers of ribbons. One araucaria was seen with a large bow between each whorl of leaves, a large one at the bottom and graduating in size to the top of the plant. The plants were arranged in baskets with very high handles, one all dark dracaenas with a border of maidenhair and tied with blue ribbons looked pretty and effective, another planted with araucarias, anthuriums in flower, Japan lilies and a spray of cattleyas was tied with an immense bow of bright red ribbon.

A basket of cut flowers made of long stemmed white *Hydrangea paniculata*, white Japan lilies, long sprays of *Bouvardia jasminoides* and white erica tied with wide white ribbon, was very effective. Another of La France and Niel roses tied with blue ribbon looked inviting and salable. Vases of fair quality roses were to be seen, of such varieties as La France, Capt. Christy, Jacqueminot, Paul Neyron and Brunner. *Bouvardia jasminoides*, very fine sprays, seemed to be a favorite, as it was seen in all the windows. Bouquets of orange blossoms about four inches in diameter, made rather close and covered over entirely with a thin white lace with a heavy border and tied with long narrow ribbons, appeared to be the conventional bride's bunch, as it was seen in several windows. There seemed to be a much better summer trade in all the European cities during August than in the United States.

In one of the small parks in the residence portion of the city there were some pretty landscape effects. Paths bordered with shrubbery, which in turn was edged with flowering and foliage bedding plants on the lawn side, looked very beautiful from across the lawn, but a photograph unfortunately conveys no color idea, which is really the life of such a view. Happening to be in the neighborhood of the Eiffel Tower, after being refused admission with a camera, the unusual sight of a large tree in full leaf coming toward us on the bridge over the Seine was the occasion of some rapid work to get the accompanying picture. It was mounted on a low four-wheeled truck drawn by three large horses and had quite a con-

siderable body of soil and roots. The trunk appeared to be at least 9 to 12 inches in diameter. We would like to have asked some questions about the chances of the success of this move, but refrained.

The famous cemetery Pere Lachaise is an interesting place to visit. Inside the gate one is immediately relieved of anything that looks like a camera, and several very interesting sights had to be left behind. There is some pretty bedding for a short distance and then the entire cemetery is taken up with tombs and monuments; the walks are narrow and there are very few wagon ways. Many vases for plants are to be seen and nearly all in good order; there are very few grass plats, the entire space being occupied by the tombs and tombstones. The most interesting part from a trade standpoint was the decorations of the tombs and lots. It was wonderful to see the immense number of bead designs; they were on all sides, not a single inclosure was seen that did not have several, and many lots were piled level with the railing and containing at least 50 or 60 of these glass bead flower emblems. The beads of different colors are fashioned into the shape of flowers and vines and made into various forms, mostly wreaths, some of which are of immense size. In some lots the colors of the designs were entirely blue and white. Some contained all white and white wreaths of cut flowers as well. Over many of the graves there was a glass house erected like a small conservatory, and in this were suspended the bead wreaths. Quite a number were at least eight feet high and long and three feet wide. The round rope yellow immortelle wreath was also very popular, and six to eight of these of different degrees of freshness were seen on a bar under a glass awning made of two long panes of glass fitted to an iron frame so as to throw off the water.

Some lots in which there had been recent burials contained many wreaths of natural flowers as well as the bead variety. The natural flower designs appeared to be all made on straw forms, long straw being bound about with string and bent to suit. Several large piles of these straw forms were met with on the wagon ways and were being handled by men and piled up either to be burned or carted away. Some yellow immortelle wreaths were noticed made of the single flowers wired and then made into sprays; the effect was good. Very few porcelain flower pieces were seen, the bead work having almost a monopoly. There was a great deal of lettering, mostly done with tin enameled letters. The one pleasant recollection was that "ladders of life," setting suns, the sad hour clocks, etc., etc., were conspicuous by their absence.

K.

New York.

The cut flower market is beginning to feel the combined effect of Lent and the long bright spring days. Everything is abundant and the buyer practically sets the price. Only the special fancy grades are touched by the large retailers now and these in very limited quantities, "drips and drabs" as James Hart would say. The great bulk of average quality stock goes to the Greek, and nobody disputes his right to it all. The rubbish, and there is plenty of it, finds with difficulty a purchaser who will give enough for it to pay the express charges. There are plenty of profitless rose and carnation houses in this neighborhood that might with benefit to their owners be turned into lettuce

CUT FLOWER STORE OPPOSITE PERE LACHAISE CEMETERY, PARIS.
THROUGH AMERICAN EYES.

and radish factories. American Beauties are getting plenty again, but outside figures are out of the question for the best of them now that the Brunner has arrived on the scene. The Jacq has served the Meteor in the same manner, and Meteor must take a back seat for the time being. Of carnations there are plenty and prices on quantities are very low. Violets are tremendously overstocked. A recent sale of 10,000 violets for \$18 gives some idea of the prevailing conditions. In bulbous stock there is but little doing. Tulips are improving in quality, but lily of the valley, although very abundant is inferior in quality as a rule, and all bulbous stock is very difficult to dispose of. Harrisii lilies do not bring over two dollars per hundred in quantity.

The club meeting on Monday evening was but slimly attended. There was no special subject for discussion, and no aspirant for honors in floral design making was visible, so the business of the evening was promiscuous and not particularly weighty. Letters were read from several clubs acknowledging invitations to the carnation dinner, from Mrs. Adolph Ladenburg thanking the club for its sympathy on the occasion of Mr. Ladenburg's death, and resolutions on the death of Max Mosenthin were passed. The dinner committee reported, propositions to reduce the initiation fee to \$3 and membership dues to \$4 were presented and then came adjournment.

A stock company has been formed of which G. W. Arnett is president for the manufacture in this country of Albert's Horticultural Manures for which R. L. Merwin & Co. have been selling agents hitherto. The corporation will be known as The Concentrated Fertilizer Company.

A. & F. Rolker report increasing trade at their down-town cut flower establishment. They will begin regular auction sales on March 18 and continue them every Tuesday and Friday throughout the season.

At the funeral of Max Mosenthin there were present about forty members of the North Hudson Florists' Club. A magnificent broken column of lilies and violets made by R. Wittmann, was the club's tribute.

W. F. Sheridan will move on May 1 from West 30th street to 39 West 28th street, where he will have a better loca-

tion and enlarged facilities for the transaction of his wholesale cut flower business.

The first auction sale of the season came off on Tuesday, March 10 at Wm. Elliott & Son's Dey street rooms. The stock was dormant Holland and Belgium stock and it moved rapidly and satisfactorily under the veteran's hammer; every Tuesday and Friday hereafter until July.

Siebrecht & Wadley are highly elated over the fact that a western firm, Gause & Co., of Richmond, Ind., have selected the new rose Belle Siebrecht as the ornamental feature of their catalogue cover. The picture shows up well.

Wm. Plumb and wife have just returned from a ten days' visit to Chicago, where their daughter resides.

On the morning of March 5 the green-houses of John Hamilton, superintendent of Holy Cross Cemetery, Flatbush, were damaged by fire to the extent of \$800.

The Board of Managers of the N. Y. Botanical Garden has recommended the purchase of the mycological herbarium of J. B. Ellis, containing 75,000 specimens and supposed to be the most complete in the world.

John Van Til, son of Jacob Van Til, died at Corona on Sunday morning, March 1, of heart disease. A daughter is very sick with pneumonia.

A. Ingram, representing Hugh Low & Sons, London, arrived per steamer Lucania on March 7.

John A. Scollay of Brooklyn is very sick.

Boston.

On Wednesday, March 4, Judge C. W. Hoitt had a house-warming. Not being possessed of the gift of second sight or prophecy in addition to his many other noble qualities, the judge didn't know when he set the date and issued the invitations which were so joyfully accepted by a score of the craft, that March 4 would come right in the track of one of the worst storms seen for many years, the bridges down and direct communication between Nashua and the rest of the civilized world cut off. Notwithstanding all this, however, thirteen of the faithful started out bravely from Boston determined to get to Nashua or die in the attempt. And they got there finally, and

the keen New Hampshire winds and drifting snow were quickly forgotten in the warmth of the New Hampshire welcome which pervaded every corner of the stately mansion where the judge and his lady, with her father and mother, dispensed New Hampshire cheer without stint. Evening came all too quickly and it was with great reluctance that the fire-side, the music and hospitality were forsaken and the forty mile trip for home begun. It was five and a half weary hours before Boston was reached and past two o'clock in the morning before some of the half frozen excursionists set foot on their own door-steps. Some maintain that the hoodoo lay in that number thirteen. Perhaps it did, but there is not one of the thirteen who would not be willing to take the same chances over again if assured of the same good time at the other end.

The market is very dull. Plenty of stock and few customers excepting the street lakirs who manage to make a good hole in the surplus every pleasant day. There are plenty of roses at very low figures, the only exception in the matter of price being Brunner, which is now coming in in fine form and sells well. Bulbous stock is in no demand, and lilies, callas, etc., are disposed of with difficulty. In carnations there is some activity; good Scotts and white varieties moving fairly well. The funeral of the late Governor Greenhalge used up an enormous quantity of white flowers and it is probable that more money was spent for funeral decorations on that occasion than for any similar purpose for many years. The retailers are making preparations for Easter and several of them have already secured extra stores in anticipation of the usual big demand.

At the monthly meeting of the Mass. Horticultural Society on March 7 six new members were admitted, the number including Wm. F. Dreer of Philadelphia. Mrs. E. M. Gill and James Comley made attractive displays of cut flowers and a silver medal was given to W. P. Winsor for a plant of *Cattleya Trianae alba*.

The Newton Horticultural Society has voted to employ men to go through the city and destroy all the poison ivy and dogwood, also to pay one dollar per thousand for the collection of belts of the eggs of the tent caterpillar.

Visiting Boston: W. Dykes, J. E. Killen representing C. H. Joosten and W. Rolker, all of New York.

Philadelphia.

There is not much to say of the business; things are running along fairly well for Lent, and all are looking forward to a good Easter trade. Prices are about the same as last week for most stock except the tea roses, of which the best grade can now be purchased for from 6 to 8 and the cheaper stock 4 to 6. Valley has been sold very low on the streets, and there is much kicking among the stores, who can do considerably better by patronizing the fakir than getting their supply through the regular channels, and nobody sells to the fakir?

The next meeting of the Horticultural Society should be very interesting. The lecturer will be Prof. Bailey of Cornell, his subject "Von Mons' theory of the production of varieties." This should be of great interest to those of the trade who are engaged in raising new varieties of carnations, roses and other flowers. The committee having in charge the fitting up of the new club rooms went over the ground with the architect last week, and

find that any alterations desired can be done at very small expense, and when these are made the work of fitting up will be pushed rapidly to completion.

Chas. D. Ball is now president of the Gun Club, W. J. Colflesh vice-president, G. Anderson captain; and the offices of secretary and treasurer will be managed by A. B. Cartledge as before. The various members of the team have been given handicaps, and a beautiful medal to be competed for monthly or semi-monthly has been presented by Mr. Donaldson. As handicapped it seems as if all hands have a good chance for the prize, which is to belong to the member winning it the greatest number of times during the year.

The matter of adjusting the business of Walter Cliffe, who made a proposition to pay his creditors 50 cents on the dollar is still in abeyance. Mr. David Cliffe was to be asked to pay a portion of his son's debts, as the creditors thought that what appeared to them to be an excessive rent had taken all his son's profits.

Mr. Wm. K. Harris was treated to a surprise by a number of his friends in the trade last Tuesday evening. It was the occasion of another year having rolled round, and another anniversary of his birthday was passed in the midst of friends, who wished him many happy returns of the day. Mr. Harris has a very musical family, in fact among his many accomplishments his manipulation of the fiddle and the bow is not the least, and the company were treated to some excellent music. After refreshments and songs contributed by the visitors the party set out for home at the wee small hours, after having spent a enjoyable evening. K.

Indianapolis.

The March meeting of our local Florists' Club was held Wednesday, March 4, in the regular meeting room. It was decided at the February meeting to appoint the following committees to arrange for a carnation display and entertainment; they were instructed to invite visitors from other cities and request carnation displays of seedlings and novelties. The arrangement committee, H. Rieman, Jno. Berterman and Fred Huckriede, and the committee on entertainment, E. A. Parker, Prof. Walker and F. B. Alley, succeeded in making the meeting one of great interest and a complete success beyond expectation. In the absence of Pres. Hartje, who is confined by sickness, Vice-Pres. H. Rieman presided. He introduced Mr. E. A. Parker, who made the speech of welcome to the local members, visitors and visiting florists from other places. Mr. Gillette of Cincinnati made the response in a rattling good speech at the close, inviting every one to attend the rose display to be given by the Cincinnati Florists' Club March 14, and also to the National Carnation Meeting to be held in Cincinnati in 1897, a little early for an invitation he thought, but he wanted our minds to be ready when the official invitation came along.

Mr. Hill of Richmond responded on the subject of raising the "Ideal flower," his remarks were entertaining and to the point. In the discussion following Mr. Fred Dorner, Mr. Aughinbaugh, Mr. Wm. Murphy of Cincinnati, Mr. McBurney of Atlanta and others took part.

Mr. Wright, a young chemist in the employ of Eli Lilly & Co., exhibited specimens of naturally preserved flowers, leaves, etc. (should think of great value to botanists), he promises to give me full description of the whole proceeding, as soon as he has fully developed his experi-

ments. After a report from the premium committee the meeting closed, to be followed by a substantial lunch, coffee and other welcome refreshments, not to forget the cigars. Piano and singing made a charming finish. It was past midnight when this happy gathering parted. A party of ten or more made arrangements to visit Fred Dorner & Son's place at Lafayette, Ind., Thursday morning.

The committee on awards consisted of Robert McKeaud, Indianapolis; John Freise, Newport, Ky., and Henry McBurney, Atlanta, Ga. Their awards were as follows:

Henry Rieman, Indianapolis, honorable mention for carnation Sunbeam and certificate for large specimen plant of Davallia stricta. Bertermann Bros., certificates for valley, assorted carnations, carnation Sunbeam, cineraria and cyclamen plants and honorable mention for decorative plants. E. G. Hill & Co., Richmond, Ind., certificate for carnations Gen. Lew Wallace and Katie Schaffer; honorable mention for Mrs. Thompson. Wm. Murphy, Cincinnati, received certificate for carnation Bridesmaid. Henry Michell, Marion, Ind., exhibited E. V. Debs, No. 196, and several other seedlings, which were recommended for further trial. Myers & Samtmann, Wyndmoor, Philadelphia, received certificate for blooms of Della Fox and honorable mention for plant of same, which was well grown. R. Witterstaetter, Sedamsville, O., received certificate for carnation Miss Emma Woher. F. Dorner & Son received certificates for Mrs. C. H. Duhme, Uncle John, Dazzle, Albertini and Meteor. Young & Sonnenschmidt, Indianapolis, received certificates for Albertini, Daybreak and Uncle John.

Among the roses, the Hasselman Greenhouse Co., Indianapolis, received certificates for quality and fine growth with Testout, Bride and Bridesmaid. Hill & Co. received certificate for La France and also for Belle Siebrecht, which showed a good color, though stems somewhat weak in the neck. Alfred Pahud, Indianapolis, received certificates for fine specimen calla lilies and cinerarias.

Among the carnation blooms shown were some of extreme size, fine color and delightful fragrance. Miss Emma Woher, a delicate pink, shade darker than Daybreak, is really an acquisition to existing colors. Sunbeam, Jubilee, Dazzle and Gen. Lew Wallace are scarlets that are beautiful for color, size, stem and fragrance. Mrs. Thompson was another fine pink one shown. All the older varieties shown were remarkable for their condition, especially Mrs. C. H. Duhme, Bridesmaid, Albertini, Meteor, Uncle John, Daybreak, Lizzie McGowan. Stuart & Haughey, Anderson, Ind., showed some fine cut roses and flower of a beautiful red amaryllis. Among the exhibit of Bertermann Bros. were some finely grown trumpet major narcissus and tulips. The whole exhibit was very creditable and was worth being shown in a more public and convenient hall. In the writer's opinion these shows given several times during the year, everybody invited free or probably a nominal admission charged, should settle the discussion, "How can flower shows be made more successful."

Following were our visiting florists: H. McBurney, Atlanta, Ga.; E. G. Gillett, Wm. Murphy, Jul. Schuman, Sam Kuhn, Tom Windram, Cincinnati; John Friese, Newport, Ky.; Fred Dorner, Lafayette; E. G. Hill, Richmond; J. S. Stuart, Anderson; Fred Winn, Martinsville; Wm. Hartje, Cambridge City, Ind.

Mr. John Hartje, president of the Florists' Club, is down with typhoid fever.

He is reported to be getting along in good shape.

A party of ten or more accompanied friend Dorner to Lafayette to see carnations grown as they should be grown.

At a recent visit to Detroit the winter found the principal florists in good spirits after a good substantial holiday trade. A visit to Breitmeyer & Sons' extensive greenhouse establishment found much of interest. The carnation houses were in perfect condition, Albertini, Scott and Daybreak were conspicuous for their size and growth, so was also their new yellow seedling, Mayor Pingree. It is remarkable for its growth and length of stems, the keeping quality of the flower is without equal. The California violet is a great success with them. Mme. Watteville, Mme. Cusin and Sunset roses are some of their specialties. Their city sales place, store and conservatory the writer consider an ideal floral establishment.

Local flower trade has been, before Lent set in, good, as good as could be expected. Lent is being more closely followed in this city than formerly, consequently business is somewhat slower than usual at the present time. W. B.

Buffalo.

On Wednesday, March 10, the annual election of officers of the Florists' Club took place. There was a good attendance present, all knowing that a good time was to follow. After the general business of the club was transacted the election followed. The following officers for the year were elected: E. I. Mepstead, president; S. A. Anderson, vice-president; Wm. Legg, secretary; Geo. Asmus, financial secretary; W. F. Kasting, treasurer; executive committee—J. T. Cowell, D. B. Long, J. Heiser, W. A. Adams, C. H. Keitsch. Reports from the financial secretary and treasurer were read and accepted. The club here adjourned to the banquet hall, where an elegant spread met their eyes. The chandeliers and table were beautifully decorated with asparagus, tulips, carnations, roses and violets. One familiar face was missed that has in all previous years attended the banquet and acted as toastmaster, President Scott. But who could make a better one than Mr. Keitsch? He has such a neat way of getting around a thing. After we had partaken of everything on the bill of fare toasts were in order. Mr. Keitsch started the ball rolling with an able address, and called on Mr. Mepstead to respond to the toast "Our new president." He responded in great style and mentioned many things that would help the club along. Mr. Legg ably responded to the toast "The general florist." Mr. Cowell and Mr. McMillan responded for "The Buffalo parks," Mr. Long for the S. A. F. Mr. Adams, in one of his sarcastic little speeches, answered for the retailer. Mr. Anderson spoke on "New ideas," which is a good idea; Mr. Asmus on "The decorator," Phil Scott on Saturday half holiday. This was the one that caught them, not the speech, but the half holiday. Billy Kasting spoke for the commission man. Mr. Beatus of Dayton, O., responded for the guests, and last but not least "Jake" Heiser spoke for the ladies. The subject seemed to suit "Jake," as he gave a long and interesting talk. The club will hear more of him now, as he has been elected on the executive committee. Letters of regret were read from Mr. Buddenborg, who could not attend, and Mr. Scott, who is ill at home. A drink to his health and a speedy recovery was tendered. As it was getting into the small hours of the morning the party

VIEW IN A PARIS PARK.
THROUGH AMERICAN EYES.

now broke up, all having a pleasant time.

There was quite a gathering of out of town members and guests, including Mr. H. Wise, Mr. F. B. Lewis, Mr. Thomas Mansfield, Mr. Mosier of Jamestown, Mr. Beatus of Dayton, O., and Mr. Smiley of Lancaster, N. Y. P. S.

Pittsburg.

Trade has been very quiet this week, nothing of special importance going on, but notwithstanding the large number of fashionables away on trips to Florida, Europe, California and elsewhere, there was a steady demand of small orders; with these, and the usual amount of funeral work the florists have had a fairly good week. Stock plenty and in the main good quality.

Mr. Weber of H. Weber & Sons, Oakland, Ind., and J. Doppelt of Erfurt, Germany, were recent visitors.

Mr. Gustave Ludwig exhibited sweet peas *Blanche Ferry*, the first of the season, grown by Mr. John Murchie, Sharon, Pa., also good pansies. Messrs. Beckert Bros. sent in (also the first ones) corn flowers, ranunculus and some very fine specimens of *hougainvillea*, with their usual fine assortment of roses, carnations, etc.

Mr. E. H. Becker, 6105 Penn avenue, East End, is putting up a small greenhouse, 60x15 feet, in the rear of his store-room, heated by steam.

The contract has been let for the new entrance-way to Highland Park. The plans show that it will be a most imposing decoration. The plan is to have two large upright monumental pieces on either side of the driveway. These are composed of groups of four Doric columns, on the top of which will be groups of figures signifying "Welcome." At the side will be single figures of women holding electric lamps and a semi-circular balustrade with eagles on either end. From the ground to the top of the monument the height will be 60 feet. The pillars will be granite and the figures bronze, heroic size and standing on an eminence, the effect will be grand. The entrance-way is 50 feet wide. The designer is the New York sculptor, G. Moretti, who is making the models so as to have all completed early the coming summer. Supt. Burke, in

charge of Highland Park, while he does not divulge any of his plans for decorative work for next season can, judging by his work last year and which was so much admired by our visiting florists, be relied on to have the grounds there beautified worthy of the magnificent new entrance.

W. Lowe is out once more after a siege of "Job's comforters," he regretted missing the club social very much and he was missed by them too, as he is one of our "live" members.

Waller Breitenstein, who has been sick for about two weeks, is on deck again and can be found at his new store regularly. He was rather unfortunate in being sick just after opening in his new venture.

REGIA.

St. Louis.

The cut-flower trade in St. Louis has felt the effects of Lent but little. The past week in the retail stores everybody had something to do, most of the work being for funerals. At the wholesale establishments the stock did not accumulate as it did a week ago. Prices are a little low, but about up to the mark of previous seasons. The opening of the opera season at the Music Hall this week will no doubt help the trade somewhat. The market has never been better supplied here as to quality and variety. Roses in all popular sorts are not abundant and bring from \$4 to \$8, the latter figure is for good long stem stock such as Brides, Bridesmaid, Meteors and Kaiserin. Carnations are down a little but good common stock still brings \$1.50 and anything better \$2. Daffs were plentiful a week ago, but a little scarce now, but there is not much demand for them. They bring \$2 and the single 50 cents. Violets are away down in price, southern 10 cents a hundred, home grown 20 cents and double 50 cents. Harrisii are selling slow and the price is down to \$4 and \$6, callas \$5 and \$8, valley \$2 and \$3, Dutch hyacinths \$4, Romans \$2 and \$3, mignonette is offered freely and meets with good demand at least that grown by A. Meyer, which is about the finest in the market. Smilax is also selling well and bring \$15 and for the best \$18.

Visitors in town were Chas. Le Massey from Dayton, O.; Joe Rolker of A. Rolker & Sons, New York.

J. M. Jordan returned Monday after being about twenty days on a visit to New Mexico.

The Houseman Floral Co. has bought the greenhouses and land of the Hausburger Floral Co. at Sutter, St. Louis Co.

The preliminary list of the premiums to be offered at the next chrysanthemum show is out and every florist will have them by the end of this week. The committee has secured so far \$545 in special prizes and \$500 Shaw premiums, making a total of \$1045 pledged for prizes for the next show. The names of the firms who offer special prizes are as follows: Jordan Floral Co., \$50; F. C. Weber, \$50; Reissen Floral Co., \$50; Ellison & Tesson, \$50; E. H. Michel, \$50; Wm. Pappe, \$25; C. A. Kuehn, \$25; Cannon Floral Co., \$25; Chas. G. Fleckenstein, \$25; Sanders & Beneke, \$25; C. W. Wors, \$25; Wm. Schray, \$25; Frank J. Fillmore, \$25; C. Young & Sons, \$20; North Floral Co., \$20; Avers Floral Co., \$15; Dr. Halstead, \$15; George Waldbart, \$15, and Frank Bucksht, \$10; Henry Shaw Estate, \$500. Total, \$1045. The committee will have another meeting next week.

At the Bowling Club Monday night the members who showed up had a very pleasant time and some very large scores were made. Johnnie Kunz came out with his rabbit's foot, the one that Papa Jordan brought him from Mexico to win the medal, but he came fourth in the race and had to pay the car fare home. The three best games rolled were by Beneke, 632; second, Dr. Helwig, 598; third, F. C. Weber, 558. The highest single score was made by Beneke, 242; Helwig second, 232, and Kuehn third, 216. Next Monday night the club will select a team of six to roll a match game with the Mag-nolias of South St. Louis. J. J. B.

Chicago.

This week flowers have shown quite a shortage, keeping prices stiff at outside figures in most lines. In roses Beauties seem to run largely to short stems, and long stemmed flowers are comparatively scarce. The flowers are very good in quality, deficiency in stem being the only drawback. All roses sell well, running from \$4 to \$7, and the quantity coming in is not as large as we expect at this season, probably due to dull weather. Reinberg Bros. are cutting superb Testout, large richly colored flowers on stems that would do well for Beauties; they sell at \$8. Carnations share the scarcity of roses; white ones especially have been scarce. They run from \$1.25 to \$1.50, fancies \$2 to \$2.50; these include Stielow's Buttercups and Kelers, which are excellent. Mr. Mundt is also cutting fine carnations. Violets run from 40 cents for poorer grades to 75 for the best; a great many of these have been shipped out of town, keeping the local market well cleaned up. Shipping orders have been excellent during the week, some very large lots being sent out, which no doubt accounts for the scarcity of fakers along State street. Bulb stock shows some signs of slackening in quantity. Harrisii sells very slowly, and callas are a drug except for cheap out of town orders.

Of the attachment suits brought by a number of growers against Mr. T. J. Corbrey six were dismissed and two were tried and non-suited last Wednesday. The result has been looked for with much interest by the commission men. The suits were brought to bring about a division among the growers of money alleged to have been appropriated from sales of their stock by E. F. Winterson

when in Mr. Corbrey's employ. When Winterson was arrested by the detective agency he was induced to turn over some \$1,500 in his possession which was supposed to be money that really belonged to the growers, no record of sales having been made. But Mr. Winterson afterward claimed that he had been forced to turn over money that actually belonged to him. Mr. Corbrey freely acknowledged that this money did not belong to him, and announced his intention to distribute the amount as equitably as possible among those who were consigning to him at the time during which the amount was misappropriated, but under the advice of his attorney declined to make such distribution until the original case against Winterson had been settled. In the meantime Mr. Corbrey was preparing to dispose of his remaining interest in the business, and the growers got the impression that he was to sell out and remove to California, where he has spent his winters the last few years. They therefore brought the suits, which were for the difference between the value of the stock consigned and the amount of returns on sales. They did not expect to receive such amount but believed that Mr. Corbrey would be forced to show his books in defense and that the \$1,500 in dispute would be brought into the case in that way.

In dismissing the cases the court held that the complainants could not establish a claim for a specified sum, and in regard to a demand from a shipper for an accounting of all stock shipped during one or more years the court held the view sustained by a decision of a similar case in New York that a shipper accepting his statement of account and receiving the money therefor waives all other claims and the settlement thus made is final. The possession by Mr. Corbrey of the \$1,500 under the circumstances described did not affect the question as brought before the court.

Mr. Corbrey says he hopes to soon be able to adjust the matter satisfactorily to all parties interested. But in the meantime he proposes to bring damage suits against each of the parties who brought the attachment suits against him, and the end is not yet.

Bassett & Washburn are cutting some fine valley. Trays of blooming pips recently displayed at their city place showed a flower from every pip without a single miss and quality first class. Though disappointed with their Morgan and Seebrecht roses earlier in the season they say the plants are now doing finely and are very satisfactory, Morgan especially proving a good money-maker.

Corbrey & Co. are about to add a new ice box, chiefly for use in storing carnations.

James King, formerly in the seed business in this city, is starting in business at Elmhurst, Ill., where he will grow nursery stock and perennials.

At the meeting of the Florist Club last Thursday evening three new members were elected. Mr. Jas. Reeve, foreman for Mr. A. McAdams, showed some very fine primula flowers.

It was decided to have a "violet meeting" March 26. There will be an exhibition of violets, including new varieties and some pointed discussions on methods of culture and value of the various sorts in the market. It is believed that the violet has not received the attention to which it is entitled and that the proposed meeting will excite wide interest.

William L. Bray, M. A., has been appointed by the Lake Forest University

trustees adjunct professor of botany to serve until the close of the present year. He will fill the position made vacant by the departure of President Coulter.

Recent visitors: Wm. Clark, Colorado Springs, Col.; A. V. Van Zanten, representing Van Zanten & Co., Hillegom, Holland.

The species of roses or will be leased to responsible parties. Anyone contemplating engaging in this business will lose the chance of their lives if they fail to communicate with the undersigned.
M. P. B., Room 85, 21 Malden Lane, N. Y. City.

Washington.

Notwithstanding the Leaten season trade is very good. While there are no large decorations, teas, luncheons and musicales fill in the time, and though the decorations are on a small scale, they are usually rich. The florists' show windows are brilliant with bulbous flowers, which while not as much in demand as they once were, serve to make the windows attractive.

Lilies are coming in freely, but prices are low. Violets are plentiful and excellent, and are in demand. The street fakirs are disposing of them at marvellously low figures. I am told that they are peddling them for less than the florists can buy them at wholesale; the same applies to all bulbous stuff.

Carnations are plentiful and fine, and are more in demand than any other flowers; they retail at from 50 to 75 cents a dozen. Roses are excellent with the exception of Beauties, which are scarce and as a rule poor, with short stems, and are retailing from \$3 to \$8 a dozen. Brides and Bridesmaids bring from \$1.50 to \$2, extra good ones \$3; La France \$2, extra fine ones \$3 to \$3.50; Perles and Woottons \$1.50, Meteors \$2, tulips 50 to 75 cents, scarlets and double pinks being mostly in demand; Harrisii \$2.50 to \$3.

Spiraea japonica is beginning to come in. First-class stock of all kinds except carnations have until the past week been scarce. There continues to be a good demand for azaleas in flower, in fact all plants in bloom are sold readily.

Mr. Pfister, at the White House, has a fine display of cinerarias this season; they are exquisite in shades and have remarkably large flowers. He has also some fine double ones. His specimen azaleas are unusually fine. He has a good display of amaryllis, among them some fine seedlings of his own raising. Their orchids are doing excellently this season and have flowered well; there is still a good display of bloom in the main conservatory, among which are some fine *Lælia anceps grandiflora*, the flowers being very large. He has several large specimens of old poinsettia planted out which are now producing a second crop of flowers, some of them having as many as six good sized heads along the stem, from which were cut the main flowers some six or eight weeks ago. REYNOLDS.

Cincinnati.

The general run of cut flowers the past week has been moving slowly; had it not been for funeral work the store men, would have cause to complain.

Several of the Holland bulb growers have made their appearance.

Mr. A. C. Heckman of Covington has removed to a new store on Madison avenue. This is one of the finest store in the three cities and Alb. has moved in the right direction, he has now better facilities to carry on his business; we wish him success. Several of the craft attended the Indianapolis carnation meeting, March 4. The party consisted of Messrs. J. Freis, E. G. Gillett, Wm. Murphy, J. Schuman, Thos. Windram and Sam Kuhn. They all speak highly of the carnations on exhibition and were royally entertained.

Thursday morning Mr. Parker escorted the boys to Mr. A. Wiegand's place; after inspecting his place Mr. Wiegand informed them that Indianapolis has been for several years a temperance town and to be on the safe side, he keeps a little on hand. He brought forth several bottles of California wine and all wished they could stay with him longer.

From here they made a flying trip to Mr. Fred Dorner's and "what a glorious time we had," said one of the members of the party. They report that they never saw carnations grow like those at Lafayette. "Why," said Julius Schuman, "Dorner's carnation houses reminded me of a chrysanthemum house in full bloom." After examining the greenhouses they had an elegant spread and delightful music; a merry good time followed which will be long remembered with pleasure.

F. H. BURDETT, CLIFTON, N. Y.

Milwaukee.

Business, on the whole, since the advent of Lent has been quite satisfactory to the florists, but funeral work was the chief sustenance, as the weather since the beginning of March has been constantly on the incoming lion order; but florists can now console themselves by the hope that it will go out like a lamb, which will be an advantage to both growers and buyers for the Easter trade.

A large wedding is looked for the latter part of the month for which some florists are already beginning to bestir themselves, the son and daughter respectively of the founders and owners of two of the largest breweries in the world being the contracting parties.

A large transfer of greenhouse property was consummated during the week by Messrs. Hackett & Hoff, a local real estate firm, by which Archie Middlemass became the owner of the P. J. Deuster property on the Blue Mound road opposite Calvary Cemetery. The tract includes two and a half acres of ground which is covered with greenhouses, twenty-two in number, an office and stable; the price paid was \$20,000. It is understood that Mr. Middlemass will embark in the wholesale flower business. Mr. Middlemass will continue to personally supervise his Forest Home avenue greenhouses, while those on the Blue Mound road will be placed in charge of a competent florist.

The demand for good stock keeps pace with the supply, there being plenty of poor and inferior stock left over. Carnations especially now show the advantage in disbudding. Bulb stock is plentiful and demand exceptionally light even at very low figures.

Philadelphia.

The regular monthly meeting of the Pennsylvania Horticultural society will be held in the hall of the College of Physicians, 13th and Locust streets, Philadelphia on the evening of March 17 at 8 o'clock. Prof. L. H. Bailey, Cornell University, will deliver a lecture on Van Mons' Theory of production of varieties. Premiums to the amount of \$35 as per schedule of 1896, offered by Henry A. Dreer, Inc., will be competed for at this meeting. The meeting is open to all.

cure insertion in the issue for the following Saturday.

Address THE AMERICAN FLORIST CO., Chicago.

THE TRANSACTIONS of the Pennsylvania Horticultural Society, Vol. I., recently issued, forms a valuable contribution to horticultural literature. It includes the papers read from December, 1894, to December, 1895, with a description of the exhibition of 1895, and of the ceremony attendant upon laying the cornerstone of the new building. The papers here published include many subjects, and will, as years go by, possess great historical value. Mr. Lonsdale gives notes about progress in floriculture and Mr. Craig tells about plants for home adornment. Prof. John B. Smith, in his paper on insects and insecticides, discusses the different means of treating distinct types of insects. Mr. Landreth is very interesting both in his historical paper and his paper about vegetables. Papers on plant food and allied topics, street trees, etc., go to make a most interesting volume, to say nothing of Mr. Rust's thoughtful review of the last chrysanthemum show. The volume reflects great credit on the progressive organization it represents.

BEDFORD, N. Y.—The Bedford Flower Club, which was organized last October, is planning to extend its influence and usefulness by holding a rose exhibition in June and a chrysanthemum show in the fall. Jas. Wood is president, T. Elwood Carpenter, secretary, and A. J. Tharp, manager of exhibitions.

MAMARONECK, N. Y.—Louis Karsten, formerly of Larchmont, has moved to this place and entered into partnership with Mr. Johnson, the firm name being Karsten & Johnson. They have built six houses, and intend to erect four more in the spring.

LOWELL, MASS.—Geo. W. Patten broke one of the tendons of his right leg while bowling at the Olympic alleys on March 5. The injury is quite a painful and he will be compelled to use crutches for some time.

PROVIDENCE, R. I.—The greenhouses, barn and outbuildings belonging to Isaac Hazard were destroyed by fire on February 28. The loss was about \$10,000, covered by insurance.

THIS is last call for advs. for our Special Spring Number to be issued next week. Advs. must reach us by the morning's mail on the 19th inst. at the very latest to be in time.

MESSRS. A. V. Van Zanten and H. Van Teylingen, of Van Zanten & Co., Hillegom, Holland, are on a business trip through the U. S.

OUR special spring number will be issued next week.

The boxes as they appear when set up for use.

We make them in a sufficient number of sizes, including for violets, to meet all necessary requirements.

The Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

S. E. BRIGGS, Pres.; T. W. WOOD, 1st Vice-Pres.; ALEX. RODGERS, 2nd Vice-Pres.; A. L. DON, 114 Chambers St., New York, Sec'y and Treas. The fourteenth annual meeting will be held at Niagara Falls, N. Y., June 9 to 11, 1896.

VISITED NEW YORK: Wm. Langbridge, representing J. B. Rice & Co., Cambridge, N. Y.; S. D. Woodruff, Orange, Conn., and Mr. Clark, Jr., Milford, Conn.

THE AMERICAN SEED CO., of Buffalo, N. Y., has been incorporated with a capital stock of \$25,000. Directors, R. Woodruff and L. G. Woodruff, of Buffalo, and W. W. Phillips of Ludys Lane, Pa.

THE schedule of liabilities and assets filed by the assigned firm of De Cou & Co., St. Paul, shows assets of \$1,300 and liabilities of \$9,700. O. M. Metcalf is made assignee. **FELIX.**

REPORTS of unsatisfactory mail trade continue general; that much cause for this condition lies in the unseasonable weather, nevertheless there seems to be reason for some doubt if the season's trade can finally equal in amount that of 1895.

OBITUARY.

HENRY PHILLIPS, of the Henry Phillips Seed and Implement Co., Toledo, O., died February 28. Mr. Phillips was a prominent figure in Toledo business circles through a commercial career of nearly forty-five years, and was warmly esteemed by a wide circle of friends and business associates. He was a valued member of the American Seed Trade Association.

Mr. Phillips was born in Brunswick, Germany, in 1828, and when 21 years of age bade adieu to his native land to cross the sea and make for himself a home in this newer country. He manifested a progressive spirit from the start, and in 1852 embarked in the seed and implement business upon his own account in Toledo, and with but a brief intermission continued in the same to the time of his death. During recent years three of his sons have been associated in business with him.

He leaves a widow and nine children.

Catalogues Received.

Plant Seed Co., St. Louis, seeds; I. N. Kramer & Son, Cedar Rapids, Iowa, seeds and plants; American Boiler Co., New York and Chicago, heaters; The Cottage Gardens, Queens, N. Y., carnations; Geo. B. Toronto.

Lent has really begun to make itself felt during this week and store trade has been a little dull. The quality of cut flowers coming in is very fine, it is not their fault at any rate that they go slowly. The departmental stores have been advertising cut flowers very cheap: Roses 50 cents a dozen, carnations 15 cents. Can there be any money in that for either grower or store? Dunlop reports that azaleas and rhododendrons sell quickly; his trouble is to keep up with the demand for violets. Daffodils and tulips are becoming scarce.

Mr. Richard Marshall has left Sir Casimir Gzowski's place, and Mr. Robt. Gore, the late second gardener, reigns over the potting shed in his stead. Mr. Gore is an experienced man and will no doubt be heard from at coming flower shows; he has already shown something of what he can do.

There are rumors of large increases in the area of glass owned by the big growers this summer; Dale, Dunlop, Spears & Muston and Miller are all reported to be contemplating building more houses. E.

St. Paul.

Trade during Lent has been exceptionally good. The demand has equalled the supply, and first-class flowers have been scarce at times. Not only has there been a good demand for funeral flowers, but social functions have held forth in direct opposition to the spirit and object of the Lenten season.

Stock about town is looking very fine, and there should be a good supply of everything seasonable for Easter.

Our winter has been mild and free from snow, but we have experienced a great deal of cloudy weather.

L. G. Venzke, who has been in the business here for a number of years, has made an assignment, and has we understand accepted a position as foreman for J. J. Hill in his private conservatories.

Vogt Bros. have opened a new and elegant store on Wabasha street, and have a choice display of blooming plants and palms.

Recent callers were J. L. Rogers of Chaumont, N. Y.; J. Keur of Hillegom, Holland; H. A. Jobus, Sioux City, Ia.

New Single Violet Luxonne.

This variety is of French origin and was introduced into this country some four years ago by Mr. Francois Supiot, the Violet expert of Philadelphia, otherwise known as the "Violet King." It has, as Mr. Supiot claims, become thoroughly acclimated, and is without doubt, the most profitable single Violet grown. It is of the same size as the California, but appears nearly double its size, as all the petals open out flat, and has the advantage of flowering continuously from early in September until April, and does not come in crops like the California. It is of a beautiful rich, but soft violet purple color, with strong stout stems from 9 to 12 inches long, and very fragrant.

Shown in competition with well grown flowers of the California at the New York Flower Show last fall, it was awarded the *First Prize*.

We can fully endorse Mr. Supiot's description of the above and also his claims that it supersedes all other varieties now on the market. **\$2.00 per dozen; \$15 00 per 100.**

New Red Violet, Admiral Avellan.

Another French variety with distinct reddish purple flowers, entirely distinct from anything yet introduced. **\$2.50 per dozen; \$20.00 per 100.**

We have been appointed **SOLE AGENTS** by Mr. Supiot for the distribution of his stock, and are now booking orders for delivery **EARLY IN MARCH** for well established plants from 2 1-4 inch pots.

The Place to Buy Japanese Golden Mayberry.

GOLDEN JAPANESE

MAY BERRY

The earliest fruit known, ripening in advance of the Strawberry. Most novel, forming a shrub-like bush six to eight feet high, producing all along its branches large, white blossoms, which are followed by large, sweet, glossy, golden, semi-transparent berries. The bushes do not die down after bearing like the canes of the Raspberry and Blackberry, but continue to bear fruit for many years like the Currant and Gooseberry. Produced by Luther Burbank of California and is supposed to be a hybrid of a Japanese species of raspberry (*Rubus palmatus*) and the Cuthbert. Our plants were grown direct from the parent stock and are the true variety. They are strong and well established as shown. Doz., \$1.00; 100, \$6.00; 1000, \$50.00

Florists' Hail Association.

The outlook for the Florists' Hail Association is bright this spring notwithstanding the financial depression that generally prevails. The amount of inquiry is fully up to preceding years and new members are coming in. Henry A. Dreer, of Philadelphia, who has been a member since 1889, recently insured his new range of houses comprising 50,000 feet of glass, making a total insurance upon 135,000 feet of glass.

The value of the glass now insured in the Florists' Hail Association amounts to nearly half a million of dollars and the association has members in every state and territory east of the Rocky Mountains except Vermont, South Carolina, Florida and Louisiana.

Lowell, Mass.

John Oliver, the Pawtucket street florist, has been elected superintendent of the commons and parks; the right man in the right place.

C. L. Marshall's greenhouses and stock were destroyed by fire about two weeks ago; complete loss, no insurance.

Mr. Marcelles A. Patten has returned from a pleasant trip to New York and Philadelphia. While in New York he attended the meeting of the carnation society. Mr. Patten reports trade all along the line as being away ahead of last season's. His roses and carnations look fine. S.

Nashua, N. H.

Mr. Geo. E. Buxton contemplates removing his greenhouse plant to Concord street. He has bought six acres of valuable ground and as soon as the weather permits will put up five houses of the following size: 21x125, 18x125, 16x125, 17x125, 32x20. These will run east and west with the long (three quarter) span to the south. The houses will be heated by steam and will be built in the most approved way, adopted for roses and carnations. Both Mr. Buxton and Mr. Gaedeke report trade as brisk and encouraging. S.

Mention American Florist.

The Bridesmaid Carnation

is the pink carnation you want. It averages more HIGH GRADE blooms than any other pink variety grown. It has a long stiff stem, strong calyx, perfect form of flower and a color that cannot be excelled in its class. It sells quickly at a high price, and stands at the head of the list of pink carnations. It won the honors at the American Carnation Society Show at New York as best pink in classes A, B and C. Its growth is clean and healthy.

Order now to get your stock early.

No Rust, Strong Cuttings.

\$5.00 per 100, \$40.00 per 1000.

If you have not already received our list send for it.

H. WEBER & SONS, Floral Park, Oakland, Md.

NEW CARNATION, W. D. SLOANE.

This new sort will undoubtedly prove a leader to all Florists securing a good stock in time. We know of no better variety of its color, and none can equal it in fragrance. The plant is a strong and vigorous grower, needing but little support, with dark foliage about as heavy as Tidal Wave. Flowers are large, good substance and lasting qualities, borne on stiff stems 15 to 20 inches in length; color the same as the above well-known variety, a beautiful cerise. Very profuse bloomer, continuing to bloom late into the summer.

PRICE, \$10.00 PER 100; \$75.00 PER 1000.

PITCHER & MANDA, SHORT HILLS, N. J.

HENRY A. NIEMEYER, Erie, Pa.

Des Moines, Ia.

Trade has been fair to good lately and growers are pushing their roses and carnations all they will stand. Roses are \$1 to \$1.50 per dozen, carnations 50 cents, daffodils 75 cents, Romans and paper whites 60 cents.

At the meeting of the club at J. F. Marshall's last week J. F. displayed some fine Hinze's Whites that measured three inches across, as fine as ever seen in this section.

I. W. Lozier is cutting some good Mercets and Perles, also fine carnations. He has four houses, using hot water heat. He grows a general stock; also runs a downtown store in addition to his green-houses and grows the plants for The Iowa Seed Company's trade.

Fulmer's place we find crowded. He has but one house and it is devoted to carnations and bedding plants.

W. L. Morris has the largest plant in the city. He has ten houses 116 feet long. Here we enter a large palm house and find all the leading palms in their glory, all looking well. In roses he has Meteors, Woottons, Perles, Kaisersins, Brides, Bridesmaids, La France and American Beauty, all doing fine, Meteors especially. Chas. McNiff, his foreman, understands how to make them do their best. In carnations we find McGowan, Scott, Daybreak, Tidal Wave, Keller and Gilbert. He also has a city store, and a fair trade in the small towns throughout the state.

R. L. Blair we find at work in his city store. He has a fine run of customers and devotes his time to his store, only having glass enough to keep his palms for decorating and to grow bulbous stuff.

J. T. D. F.

Bay City, Mich.

Our attention is called to an item published on page S30 of the AMERICAN FLORIST of March 7 in relation to the mortgage recently given by our company and in as much as the article is not correct we have thought best to give you the facts.

The expressed consideration of the mortgage was \$17,000, and it secures debts scheduled to the amount of \$16,611.04 owing at the date of the mortgage (February 18, 1896) and it also secures three firms from whom we were buying flowers for any indebtedness that might thereafter accrue to them without specifying any amount.

With these important differences your item is correct.

JOHN IRVINE GREENHOUSE CO.

Mr. H. Nanz, secretary and manager of the Nanz & Neuner corporation, Louisville, Ky., reports a number of complaints from southern Illinois that a party going by the name of H. G. Nanz is representing himself to be a member of the above firm, and under this cover securing recognition to which he is not entitled. Mr. Nanz writes that his company has no relations with the party, and that it does not have any traveling agents.

Syracuse, N. Y.

The date of Mr. Grove P. Rawson's lecture "Philosophy of Vegetation" has been changed to the 19th of March, some of the members of the Central New York Horticultural Society thinking the 17th would be so green that a large attendance could not be secured; it will not be the fault of the members if there is not a very large attendance. A committee has been appointed to see that the rooms are well decorated with plants and flowers.

H. Burt has greatly enhanced the appearance of his inviting store by the addition of a magnificent cooler, the dimensions of which are 8 feet high, 8 feet long and 6 feet wide. The front and ends have solid plate glass, at the back a large mirror runs from top to bottom; the arrangement of the electric lights is perfect and the effect is most beautiful.

The weather is dull and business the same. March came in like a full grown lion, and we trust he will go out like a little lamb with plenty of sunshine to bring on our Easter flowers. H. Y.

Hartford, Conn.

Mr. D. A. Spear's store on Asylum street, is once again in fine shape. Mr. Spear underwent a deal of inconvenience on account of an adjoining building now in course of erection, making it necessary to put up with a temporary affair and plenty of dust, etc. until the "party wall" was completed.

Mr. G. W. McClunie has built a carnation house 151x21 and a violet pit 150x6, both being well planned and substantially constructed. The houses are heated by hot water. HOMO.

Norwich, Conn.

Mr. J. F. Smith has consummated a deal whereby he acquired three acres of valuable ground adjoining his green-houses.

Mr. Smith contemplates building an additional good sized carnation house, he will also give his entire plant a thorough overhauling, intending to make extensive alterations and additions about some of the houses.

Business has been exceptionally good all through the winter and good stock invariably commanded fair prices. HOMO.

AMERICAN FLORIST CO.

P. O. Drawer 164.

..... CHICAGO.

News Notes.

PONTIAC, ILL.—W. J. Miller will add a new house 8x80 for violets and vegetables and will put in a larger boiler.

STAFFORD, CONN.—W. G. Tyler will take charge of G. H. Baker & Co.'s greenhouses in place of John Brick, resigned.

TUSCOLA, ILL.—Fire did \$250 worth of damage to the office and palm house of the Tuscola Floral Co. last week.

QUINCY, MASS.—John Nichol has been reappointed superintendent of public burial places for the ensuing year.

PITTSFIELD, MASS.—The Gardeners' and Florists' Club are considering the advisability of holding a spring flower show this year.

BELMONT, MASS.—The forcing houses of G. O. Wellington were damaged by fire on the morning of February 27 to the extent of \$500.

MINNEAPOLIS, MINN.—Louis G. Venzke, the florist, has made an assignment for the benefit of creditors. The assignee is Charles Conradis, a lawyer.

SOUTH FRAMINGHAM, MASS.—On the night of February 26 the large barn and storehouse of the Framingham Nursery Co. was totally destroyed by fire.

NEWARK, N. J.—John Ritchie has instituted suit against the wife of Thomas A. Edison for \$60 claimed as due for a month's salary as head gardener.

BARNARD CROSSING, N. Y.—The firm of Payne & Veness has been dissolved by mutual consent. F. S. Payne continues the business. Mr. Veness will remove to Michigan.

STEVEN'S POINT, WIS.—The Broonie & Hamilton Co. has been incorporated to carry on a general florist and nursery business. Capital stock \$700. Incorporators: A. V. Broonie, W. N. Hamilton and others.

SARATOGA SPRINGS, N. Y.—A citizens committee will endeavor to get a bill through the legislature authorizing the issuing of bonds not to exceed \$100,000 for the establishment and maintenance of a public park.

HILLSDALE, MICH.—R. H. Hoffman, florist for the L. S. & M. S. R. R. Co., and in charge of their greenhouses here, has been arrested at the instance of the Company on a charge of embezzlement in converting plants, etc., belonging to the Company to his own use.

WINCHENDON, MASS.—James Sutherland, 3d, has retired from the firm of Sutherland & Whittemore, but the firm name will be retained by Mr. Whittemore, who will continue the business. Mr. Sutherland will engage with his father, Jas. Sutherland, Jr., at Athol.

Jones, McDuffee & Stratton, Plant Pots and Pedestals

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafters, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

THE AMERICAN FLORIST

America is "the Prow of the Vessel; there may be more comfort Amidships, but we are the first to touch Unknown Seas.

Vol. XI

CHICAGO AND NEW YORK, MARCH 21, 1896.

No. 407

It is a very simple matter to determine the character of a color, if one pursues a systematic method of comparison. When we have become certain of a single color we are of the highroad to success in determining all the others.

The prism certainly decides three simple colors, but strangely enough, in a very subjective manner. We do not positively see unalloyed red, blue and yellow in the spectrum, but in the colors we do see there, orange-red, yellow-green, and blue-purple, we can easily detect an understratum of the three simple colors which are the essential make up of all colors.

Fig. 1 shows, as well as can be expressed by black and white, the general range of spectrum color. We may call the three predominating hues, violet, green and red, or if we choose to be specific in the names, blue-purple, yellow-green and orange-red. I say orange-red guardedly, for I wish it to be understood that although the spectrum red is not pure throughout its full extent, it is far less an orange-red than vermillion is; in general effect it more nearly resembles cherry-red; but in actual fact it is not far from pure red. The yellow-green is also not far from pure green, and the blue-purple is

colors. Here, then, we are absolutely sure of a bit of ground upon which we can stand; we are certain that two colors are mixed. The next thing to do is to unmix them! Our method of comparative analysis will do this.

With the purest of color pigments I proceed to match as many hues in the spectrum as seems possible; this is a long bit of work, but not a very difficult one. I take ten bits of cardboard and paint on each one a color representative of the tenth part of the spectrum (see the ten names on the upper side of Fig. 1). Next, I take each alternate one of these ten colors and make for it four neighbors, two to stand on the right, and two to stand on the left, missing links in fact, which will connect it better with the twentieth portions of the spectrum colors which lie on either side.

Fig 3

It will now be understood that I have thirty strips of color; thirty links to a continuous chain which is sure to comprise within its limits, somewhere, the three pure simple colors, red, yellow and blue. The result of my careful gradation of hues now enables me to select about five reds with which I begin another system of subdivision.

I find that it is possible to mix two more reds which will by finer gradations fit between each of the colors already obtained. So I keep on through all the different colors until I have a system which

Fig 4

includes no less than ninety colors! Now comes the rub! Some one may challenge me at the outset with the question, "How did you get red, your representative red, in the first place?" My answer is, "I carefully guessed at it!" That seems like

a very unscientific and unreliable beginning, but it is not. I must start my investigations on some hypothesis, it is justifiable to begin with a suppositive pure red; in the end it is always possible to prove whether the supposition was correct or not; the ultimatum of the

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18
19	20	21	22	23	24	25	26	27	28	29	30	31	32	33	34	35	36
37	38	39	40	41	42	43	44	45	46	47	48	49	50	51	52	53	54
55	56	57	58	59	60	61	62	63	64	65	66	67	68	69	70	71	72
73	74	75	76	77	78	79	80	81	82	83	84	85	86	87	88	89	90

Fig 5

ninety graduated hues means that if I guessed wrong at red, I could not find space on one side of it for its gradation toward yellow-red, and there would be too much space on the other side for its gradation toward purple. As a matter of fact one does not usually hit the color exactly, but the mathematical accuracy of the system of comparison enables one to obtain the "bearings" without confusion. Besides all this, it is reasonable to suppose that one can guess approximately at the true red in the spectrum; indeed, the value of the

Fig 6

spectrum as a guide lies in the fact that while it does not exactly reveal red, it locates the color within a limited range beyond peradventure.

The proper placing of red therefore, is dependent upon a careful gradation of yellow-reds on the one hand and blue-reds on the other. By the help of a variety of pigments, one may, so to speak, drive pure red into a corner by flank movements of yellow and blue! With rose-cathame, rose madder, carmine,

simply violet, which is, of course, a much bluer color than purple.

Fig. 2 shows my idea of the understratum of blue and yellow; I add magenta-purple at the extreme left to indicate the reddish tinge which the last violet rays of the spectrum possess. My diagram is intended to represent the principle of overlapping hues; it also points to the curious fact that pure green, blue, yellow, and red are reduced to zero points on borders of unquestionably mixed colors!

Fig. 3 shows the spectrum colors arranged in a circle. Fig. 4 shows the extended influence of the primary

Jacque-lake, and crimson-lake among red pigments, and with various tinctures of magenta and orange we have fairly surrounded pure red, and it becomes only a matter of careful comparison before it is surely discovered. There is no feeling for it or guessing at it; the closing in of the ranks of blue-red on one side and yellow-red on the other means that at the point where they meet is the uncompromising long-sought color.

Flower petals I have used in the same way, and it is astonishing to note the results of a careful comparison of carnations, roses, nasturtiums, cannas, phloxes, gladioli, poppies, and hollyhocks, gradually one finds the yellow-red and the blue-red less and less pronounced until finally there are only four or five flowers to choose from, and among these there is sure to be some specimen which very closely matches the conclusive red arrived at by means of the artists' pigments. In this way I make the truth of the flower vouch for the truth of the pigment, and in both cases the testimony regarding the slight yellowishness of the spectrum red is the same.

The color wheel, which mixes colors by rapid revolutions, is another method for obtaining the truth of color; the conclusive red is fastened to the wheel and half of its surface is covered by lemon yellow; when the disk is whirled around rapidly the color produced is a dull imitation of the red in the spectrum. But the color wheel is unreliable in one respect; it does not blend color as a paint-brush does, and it does not reveal the full value of yellow; still, it practically enables us to arrive at the same results with mixtures of different reds, and it tells a story similar to the flower-petal and the artist's pigment.

I must call attention now to the chart of flower-colors published by the AMERICAN FLORIST in the issue of August 17, 1895. Here are thirty-six representative hues, one-third of which are sections of the prismatic range; they are yellow, blue, red, scarlet, violet, purple, magenta, crimson, blue-green, orange, golden-yellow, and scarlet orange. These chart colors if they are to deserve the names printed under them cannot be greatly modified. The color named pure red is qualified as a trifle bluish in the article I wrote, which was published with the chart as its indispensable accompaniment. No pigment as brilliant as this and approaching nearer the pure red was free from yellow. Hence, it seemed advisable (for reasons stated at the time) to present the red which bordered on blue. The color named pure blue might be varied as much as the red is without endangering its title, the yellow might vary toward green, but not a hair's breadth toward orange.

Scarlet is entitled to a wide range; the example on the chart is but one phase of this brilliant orange-red. The other colors are also capable of a wide range, but they are at present so nicely balanced on the chart, that they cannot be disturbed without endangering the relative value of *all* the colors.

It is surprising to know that quite recently two or three charts of typical colors have been published in this country which I find cannot stand before the simple test of comparative analysis which I have just explained. It is difficult to understand why any errors should occur in the comparative examination of colors. With nearly one hundred examples of carefully graduated pigment color before it, a trained eye certainly cannot err. If these charts had been the out-growth of such

CANNA ALPHONSE BOUVIER.

careful comparison, they would have demonstrated something much nearer the truth. The purpose of a chart is questionable, also, if it undertakes a presentation of the mixed spectrum colors; mixed color is *not* what we want to know, it is pure color we wish to have represented to us as perfectly as pigments in their impurity will permit. But in the making of a chart it is possible that errors occur in the press room, and in the completed edition the originator of the color scheme finds his ideas misinterpreted.

In the case of the AMERICAN FLORIST chart, I arranged with the printer to have the names of the colors printed *after* the chart came completed from the hand-press; even then I would not trust to the possible discrepancies of the steam-press edition, and I arranged with the editor of the AMERICAN FLORIST to have published simultaneously with the chart, an article which would enable me to correct any deviations which might appear in the steam-press edition; fortunately these were very slight and needed very little righting. It should not be forgotten, however, that colors are variable in themselves; and by no fault of the printer they will undergo a change in the press. But such variations are usually slight and inconsequential, and they certainly may be corrected verbally by the compiler of the chart. It is sufficient further to

say that the proving of the graduated pigment color by colored glass—that is, by sunlight passed through strips of colored glass—was satisfactory inasmuch as the results obtained were not different in any respect from those attending the experiments with pigment color.

I am justified therefore, in the belief that pigments are adequate means whereby we may identify colors. Let me demonstrate how simple the method of identification is with ninety color strips before us (see Fig. 5). The interval between pure orange and pure red becomes divided into fourteen parts; exactly half way between we find a representative scarlet (50 per cent orange and 50 per cent red); the interval from pure yellow to pure orange comprises twenty-two parts; half way between is golden yellow; the interval from yellow to green comprises fourteen parts; half way between is a color with an exact balance of yellow and green; the interval from yellow through green to blue is comprised of twenty-eight parts; half way between is pure green; the interval between red and blue is comprised of twenty-six parts; half way between is purple; the interval between purple and red is comprised of thirteen parts; half way between is magenta; the interval between blue and green is comprised of fourteen parts; half way between is peacock-blue.

ALPHONSE BOUVIER.

PAUL MARQUANT, FLORENCE VAUGHAN AND ALPHONSE BOUVIER
CANNAS.

I always find that the mixed color exactly between two simple colors is composed of fifty per cent each of the simple colors.

This, I conclude, is a practical method of localizing a color and on this basis I give it a specific name. If such colors as peacock-blue, purple, orange and scarlet are generally understood to be half-and-half in their character, then my theory of their location in the spectrum is correct and as I have already said, if we can identify one color, by means of it we can identify all; I have not tried to subdivide color into more than ninety parts, as such a thing would be difficult beyond conception, and I find the nicety of distinction between these ninety is about all which my eye, the pigments, and the palette knife can very well manage; anything further would seem like "splitting hairs," not colors!

F. SCHUYLER MATHEWS.

Cannas.

In this issue we present a large number of pictures of cannas, showing wherever possible a bed of plants of each variety as well as a truss of bloom, thus making it possible to judge as accurately as is possible from pictures of the questions of habit, and tendency to flower continuously as indicated by the branching of the flower spike. The photographs were taken last September, and the majority show beds growing last year in Washington Park, Chicago, under the care of superintendent Fred Kanst, who has had unusually good facilities for testing the value of the different varieties as bedders, and who is much interested in the canna as a bedding plant.

We also present in this issue a careful review by Mr. Kanst of his experience with varieties that he has grown.

REVIEW OF VARIETIES.

ANDRE, EDOUARD.—It is behind the

times now. Better ones have taken its place.

ATKINSON, C. H.—Have discarded it.

BENOIT COUSANCAT.—Has no particular merit. Should not be grown any more.

BERCKMANS, P. J.—It is a good canna with beautiful foliage, but is not up to the standard.

BOULANGER, GEN.—Have discarded it.

BOUVIER, ALPHONSE.—One of the best scarlets we have to-day, though some people object to its drooping habit. But taking everything into consideration for my own part I do not think that is such a detriment as far as general appearance is concerned. I do not know what canna you can use for general appearance that is better. It is an easy grower, good propagator, has good tubers and stands well in summer.

BOUVIER, MME. ALPHONSE.—A good canna and a coming one. Ought to be grown more than it is. It is not known

GEO. NICHOLSON.

EGANDALE.

CANNAS

enough. It is a good bedder and a good propagator, also stands well out of doors.

BRUANT, PAUL.—A scarlet canna and a good one. Saw it at the time of the World's Fair. But it seems to have gone back.

BUCHNER, SOPHIE.—Is a good scarlet canna, but does not seem to go ahead. It is one that is good in any collection for variety.

CABOS, J. D.—Is a good canna for its dark foliage. It is free flowering and a good grower, good bedder and fair propagator. On account of its running roots it has been dropped to some extent.

CARNOT, PRES.—Is behind the times now. Better cannas have taken its place. It is a canna that should not be grown very extensively except for variety.

CHARLOTTE, QUEEN.—Is a good canna of its kind. Good propagator; stands well and blooms all summer.

CHICAGO.—In my opinion the best scarlet in cultivation. Good bedder, fairly good propagator and has large flowers. Is a good deal on the order of Mme. Crozy. Particularly valuable from a decorative standpoint. The flowers hold well and when they do fall off they fall clean.

CHILDS, GEO. W.—No particular merit. CHILDS.—It is like Florence Vaughan, only not nearly so good.

CHOISEUL, COMTE HORACE DE.—Was

quite a good canna when it first came out. Others have taken its place.

COLUMBIA.—It is a good canna but Chicago has taken its place. The flowers don't open up well and they stay on until you have to pick them off, and it propagates slowly. The color is a little darker than Chicago.

COULOUVRATS, M.—It is a pretty good canna but Egandale is better.

COURBET, AMIRAL.—We dropped it.

CRAMPBEL, EXPLORATEUR.—It is a very bright scarlet, but we have others that are better. Commercial men have dropped it.

CROUSSE, FELIX.—I do not consider it worth while to grow this canna.

CROWN JEWEL.—Discarded it.

CROZY, ANTONIX.—Dropped it. Did not flower freely. Below the standard.

CROZY, MME.—One of the best cannas for general use. Easy propagator and if you only have one canna it is always pleasant to look at Mme. Crozy. If I were cut down to one canna I would take it. Has more flowers and makes more show than any other canna. Blooms all summer.

CROZY, SOUV. D' ANTOINE.—No particular merit.

DAVID, PROFESSEUR.—Orange color. We dropped it because we had other orange colored cannas that were better. Below standard.

DODDS, GEN.—It is a good dark foliage

canna but Egandale and J. C. Vaughan are in its way.

EGANDALE.—If I could have only one dark foliage canna I would pick this. It is an easy grower, and can be pulled up in the fall, thrown under the staging and taken out in the spring and it is all right.

EHEMANNI.—A shy bloomer. I do not know of a canna that has the same color, but it is too late a bloomer.

ELLIOTT, J. WILKINSON.—Of no particular merit.

FAIVRE, PRES.—A dark foliage canna. Flowers are too insignificant. Egandale has taken its place.

FLAMINGO.—A coming canna; color of Chicago; good bright canna. There is a place for it and it is one that will stay with us.

GARDEN, THE.—It is not strong enough for our winds. Flowers fall off too quickly.

GERMANIA.—It was exhibited by the Germans at the World's Fair, and I considered it at that time an improvement on Mme. Crozy, about the same color and the petals were very strong. If it were placed in a bed with Mme. Crozy it would bother most people to pick out one from the other.

GOURY.—Discarded. Not up to the standard. What I call standard is a flower with a good broad petal, one that can stand our winds and plant free blooming.

GRAY, SOUVENIR D' ASA.—Discarded.

EGANDALE

GEO NICHOLSON
CANNAS.

HARDY, PRES.—Discarded; others better.
HENDERSON, CHAS.—It is a good canna in some localities, but is not satisfactory in our soil, comes too late in the season. It rests all summer and laughs at the other cannas at the last moment. I saw it blooming finely in St. Louis. It bloomed earlier there than with us. I would not want to recommend it for general use.

HUGO, VICTOR.—Discarded.

JUST, MME.—Discarded. The flowers were way below in size.

KANST, STELLA.—Green foliage. Very free flowering. Color an apricot orange. For bedding purposes it is excellent.

LEFEBVRE, ALICE.—Discarded it. No particular merit for bedding purposes.

LEFEBVRE, M.—Discarded; no particular merit.

MARQUANT, PAUL.—We should have it more in cultivation and there ought to be a place for it in any collection. It is an

easy propagator, good bedder, free bloomer.

MESNIER, M.—If well handled it is all right. Worth growing.

MIDWAY.—Good canna. All right for a collection. Is a free bloomer and has large flowers.

MIRABEAU, OCTAVE.—Not up to standard.

NICHOLSON, GEO.—It is a bright lemon colored flower. For general bedding purposes it is a very good canna.

PREMIERES DE NICE.—Is no good. It has little, tiny yellow flowers. Perhaps good for foliage. Dropped it.

PRIMA.—Is a fair canna, but is a weak grower. Flowers are like those of Florence Vaughan. In some localities it might do well.

REVOL-MASSOT.—No merit.

RIVOIRE, MAURICE.—No merit.

SAINT-HILAIRE, GEOFFROY.—No particular merit.

SAMUELS, MRS. J. M.—It is a light red with good broad petals. Flowers very well and I consider it very promising.

SENNHOLZ, GUSTAVE.—The variety introduced under this name was afterward decided to be Paul Marquant.

SISLEY, DOYEN J.—No particular merit.

SOUTH PARK.—A good canna. It is a very free bloomer and stands the sun excellently. The petals are not quite as broad as those of Mme. Crozy. It stands the wind fine.

STAR OF '91.—A good canna but a weak grower, which is the reason it has fallen behind.

STEWART, SECRETARY.—No particular merit.

SUZZONI CAPITAINE P. DE.—Has considerable merit; somewhat similar to Florence Vaughan, worth growing in any collection. Good propagator.

TROCADERO.—Discarded it.

VAUGHAN, FLORENCE.—One of the best yellows in the market. Good propagator; good constitution.

VAUGHAN, J. C.—One of the best dark foliage cannas we have. It stands next to Egandale.

WARSCWICSI.—Has no place except in the center of a bed for tall foliage.

As to cultural details, Mr. Kanst finds that cannas are strong feeders, and that plenty of manure and water are two essentials. In preparing his beds for planting he spreads rich cow manure six inches deep over the surface and spades it in. Last summer he thought some of his plants grew too fast and gave them poorer soil but found he had made a serious mistake.

The roots are lifted in the fall and carried over winter under the staging in the greenhouses, but an even temperature must be maintained. All the flowering varieties are more or less tender and the finer varieties require the most care.

What Constitutes a Good Bedding Canna?

The canna as a bedding plant has come to stay. What is a bedding canna? It is one that presents a pleasing effect at a distance. Bear in mind the last three words, viz., "at a distance." At what time of the day are we most apt to enjoy the effects of a good bed of plants? It is in the early twilight when the master is home from his office, and the good wife through, if she is ever through, with her household cares, and all are gathered on the porch to enjoy those delightful hours of rest that follow a well spent day. That is the time when we breathe in the fresh air and say "Now we will look round and enjoy our garden."

Now comes an important test of a good canna, namely, brilliancy at a distance. Free flowering in habit is the first essential of a canna and decidedly necessary as a starting point, but unless there is a brilliancy in the color of the bloom, its effect is all lost in the distance. However beautiful when viewed near by it is valueless now.

A canna in a greenhouse, seen and examined close by as you would an orchid, may be beautiful in the extreme, but utterly worthless in fulfilling the requirements of a bedding plant. At the risk of being accused of egotism I will mention the canna Egandale to illustrate my point. It is no foundling of mine, therefore I claim no honor for its introduction. Some years ago some unnamed seedlings from Crozy were sent to me to grow for a season and note their qualifications. Each came with a tag bearing a number. Egandale was known as No. 47. They were planted in a group some two hundred and fifty feet from my house. On cloudy days, towards sundown and well into the evening I noticed from my porch that the flowers of No. 47 stood out more prominently and distinctly than any of the others and had a peculiar brilliancy, and as the twilight deepened, the flowers of the others dropped out of view, one by one, until at last as if in borrowed light from the approaching moon Egandale stood alone, still distinct and brilliant.

As a greenhouse canna or for near view I do not like it. It lacks brilliancy when so seen. It exemplifies the saying "distance lends enchantment to the view," but this peculiarity fits it pre-eminently for a bedding canna. There are other requirements I do not touch upon, such as vigorous growth, firm petals, etc., all of which are necessary in the make up of a good canna.

CANNA FLORENCE VAUGHAN.

The introducers of new varieties as a rule see them only in their greenhouse, naturally viewing them near by. Let them take flowering plants of Egandale, Alphonse Bouvier or Flamingo and add their own seedlings and place them at the end of the longest walk in their greenhouses, then go back to the other end and compare the flower heads of the new with those of the standards. Let them also view them towards sundown, and if as brilliant as the trio above named and an improvement in size and color of truss, form of petals and habit of growth, they will have something about which they can spread the printer's ink as thickly as chose and still the public will be satisfied when they grow the plants.

Remember that these remarks apply to the canna as a bedding plant, planted in masses for effect. Many varieties are beautiful in themselves and suitable for putting here and there in shrubby beds, but as a rule a large bed of one kind only is the most pleasing. W. C. EGAN.

Herbaceous Plant Notes.

The prevailing style and habit of both professionals and amateurs in planting herbaceous borders or beds, inherited from our grandfathers, can be improved upon; they were placing the taller growing sorts at the back of the bed and were contented to have everything arranged with as much regularity as possible so as to represent an even and almost unbroken sloping surface toward the walk or front

of the border. We do not advocate this exact and regular planting; it might be in place in carpet bedding, but with flowering plants of such widely dissimilar character as we have to deal with here a different style of planting would be far more effective. Among our taller growing plants we should plant some of medium height, and even in some instances low and dwarf things, still bearing in mind that such plantings must not be made indiscriminately, the time of flowering and color of the different subjects should be taken in consideration. Neither should we introduce one or two plants of medium height intermixed with tall, strong growers, for they surely would be lost entirely among them. From ten to twenty of a kind is far more satisfactory, and if a whole border be planted in such a manner the effect of light and shade, the picturesque outline of the bed with its irregularities in height, together with the diversity in form of foliage, is much more graceful and pleases the eye of every lover of nature better than a stiff and smooth surface. A few very tall bold looking plants with distinct and pleasing habit may be planted singly in order to show their outlines to full advantage, but the surrounding ground should not be left bare; we have such a large variety of useful hardy plants in different heights to select from, some of them not requiring much light or sun, and by planting and covering the surrounding earth with green, much is added to the general effect.

FLORENCE VAUGHAN

ALPHONSE BOUVIER BORDERED WITH MME CROZY

GROUP OF CANNA BEDS.
CANNAS

Moreover by planting in the above style we are enabled to give an aspect of greater diversity in the limited space of an ordinary sized garden, the eye cannot see from one point what is hidden beyond the taller patches of plants until we pass the obstruction, and then an entirely different vista will present itself. Thus we may have interesting combinations and variations of views on a comparatively small place.

My idea of a well arranged border or bed would be to introduce the clumps or patches of the taller plants, springing from among the lower ones, which in their turn should not be crowded together, but allowed space enough to fully develop their character, while the soil beneath them may be covered with a

carpet of creeping or spreading plants of only three or four inches in height. All plants must be so placed as to show the full beauty of each and every flower, or at least allow the eye to penetrate into the shady spots where the delicate foliage of the carpeting, or else some dainty little flowering plant requiring protection from direct sun, may have found a convenient lodging place.

Not only in borders, but also in flower beds of any size or shape we can satisfactorily introduce the hardy plants, and in many instances the introduction of the various kinds of early flowering bulbs among them may be considered an advantage. A very striking and lasting effect may be produced by planting a bed with tulips or hyacinths and *Lilium*

speciosum intermixed with the *Spiraea filipendula* and a few clumps of *platycodon*; the fern-like foliage of the *spiraea* will, after the early bulbs are gone, cover the ground nicely with green, and when their flowering time is over and the old stems are cut to the ground, *L. speciosum* will begin to expand, and while still in bloom the *platycodons* will be out and keep up a succession of flowers. *Scilla amœna*, with its pretty unrivaled blue flowers springing from a ground work of the yellow flowering creeping *Lotus corniculatus*, early in the season may be followed by the blue or white *polemonium*, which in turn is succeeded by some of the *rudbeckia*. *Daphne Cneorum* will cover the ground densely and still allow plenty of space for planting *Aquilegia chrysantha*

and *Delphinium sinensis* between them, followed late in fall by native *Lobelia cardinalis* or by *Helenium autumnale*. A simple and very pretty bed may be arranged by planting *Heuchera sanguinea* rather thickly, relieving the monotony by introducing a few plants of *Hyacinthus candicans*; the bed will remain green all winter. The hardy evergreen candytufts have the same advantage, and may form the groundwork for various things such as *campanula* combined with lilies, or for *epimedium* with their bronzy foliage, *paenias* and tall *delphinium* or *digitalis*. *Alyssum saxatile compactum* is a complete sheet of gold for quite a long time in spring, and its glaucous foliage hides the ground well; interspersed with geums or tall *lychnis* and a few autumnal hardy asters a very attractive bed may be formed.

The subulata section of phloxes may be used for a base in planting a bed of white *Phlox suffruticosa* intermixed with blue *campanulas*, followed by a few plants of pink *Anemone japonica*. Our pretty ever-blooming *Viola cornuta* will make an attractive show under or among the summer and fall blooming *Guillardia grandiflora* or *Coreopsis lanceolata*, which however should have all old flower stems removed as soon as the flowers are faded or else a succession may fail to appear. Endless combinations, equally good or better may be suggested, but enough has been said for this time, as the above was merely written to draw the attention of commercial florists to the fact that there is no need of using always our general bedding plants for the purpose, especially as many of our wealthiest people are getting tired of having their beds planted year after year with little variation in the rather limited selection we could make for them, confining ourselves to the so-called summer bedding plants. The majority of our hardy herbaceous plants are so admirably suited for the purpose and offer such endless combinations in colors and in growth that it is to be hoped they will, to some

extent at least, receive the attention of florists and planters, but if any of them should have his doubts about my remarks, let him try for himself any of the recommended combinations and I am sure, long before autumn sets in, he will be convinced and delighted with the result of his planting.

J. B. KELLER.

Rochester, N. Y.

Cyclamens.

BY E. F. COLLINS.

[Read before the Toronto Gardeners and Florists' Association, February 18.]

The first thing to be considered is to procure good and reliable seed, without which the best grower cannot expect to be successful. Secondly, he must never allow them to receive the slightest check on their journey from the seed pan to maturity. To have good plants in flower during the winter months seed must be sown as early as possible in January, in a compost of equal parts of light loam and leaf soil, with a good sprinkling of sharp sand, and if placed in a warm corner and covered with a piece of glass they will soon germinate, when care must be taken to admit air to them by tilting the glass to one side for a few days, after which it may be removed altogether. As soon as the seedlings are large enough to handle they should be potted into thumb pots, and if kept in a temperature of about 55° or 60°, where they will receive lots of light and given an occasional syringing, they will soon fill the pot with roots, when they will require a shift into 3-inch pots, using a compost as recommended before. Care must be taken as regards watering not to allow the soil to become dry or they will receive a check from which they will never fully recover. On the other hand, they must not be over-watered or the soil will become sour, which would do them as much harm as not having enough, but if they have been carefully potted and well supplied with good drainage, they are not very likely to take any harm from over-watering. So far as my opinion is concerned, I believe that good drainage is one of the most essential things connected with horticulture, although too often we find that during the busy season it is sadly neglected.

If proper care and attention has been given them they ought to be ready about the middle of July for another shift. This time I would recommend a 6-inch pot, which would be large enough for them to flower in, using a compost of three parts loam and one of leaf soil, with a little sharp sand. After being potted they

CHICAGO.

CANNAS.

MRS J. M. SAMUELS

must be kept shaded and well syringed for a few days; also care must be taken not to over-water them, as they will not require much until the roots have taken hold of the new soil.

Where it is possible to do it, I think that if they are kept in the same position on the bench during the growing season it is a great benefit to them, especially if they are doing well. It can often be noticed if a plant or batch of plants have been in the same position in the greenhouse for any length of time and are then shifted to another part of the house and given just the same treatment as before, they commence to go back, or, in other words, get into bad health, and we wonder what is the cause of it.

A little weak liquid manure will be very beneficial to them when the pots get full of strong healthy roots, as it will assist them to throw up the flower bud, yet my advice is not to give them too much

stimulant or it will, in my opinion, be detrimental to their growth the second year. I find it is a great benefit to give them a good syringing two or three times daily during the hot dry months, also give them a freer ventilation. Of course, after the days get cooler a drier atmosphere must be maintained or the foliage will damp off, also a little fire heat must be turned on at night to keep a nice warm dry atmosphere. They must not at any time become crowded, for if there is one plant which will show the bad effect of crowding sooner than another it is a cyclamen. How much better would it be if we could always content ourselves with a few well-grown plants, instead of, as is often the case, trying to grow double the quantity that we have room for or the time to give proper attention and care to.

A few words might here be said as regards their period of rest, as I think that is often the cause of our failing to grow

good plants the second year. It is no use to fling them down into some out-of-the-way corner when they have finished flowering and not bestow any more attention upon them, then to think that we can pick them up and start them into growth just when we please, or as in some cases, put them on the shelf and dry the vitality out of them. My idea is that after they have done flowering and the foliage begins to turn yellow they should be put in a cool house where they will receive lots of light and sun, then to gradually withhold the water from them, it must not be done all at once but step by step, to insure their being well ripened and yet to keep them plump, for if allowed to shrivel they will lose their vitality. They should never be allowed to get dust dry, as I think it often prevents them from starting into free growth again, which they ought to do soon after they lose the last of their foliage.

CHICAGO.

MRS. J. M. SAMUELS.
CANNAS.Fern Notes.
PTERIS.

Though not an extensive genus this is an important one, as it contains some of our best ferns for decoration. At the present time I should think there are more pterises grown for our London markets than all other ferns put together. In visiting the various growers who make ferns a specialty one cannot help wondering what is to become of all the stock, yet they seem to be distributed one way or another.

All the most useful sorts may be raised from spores, and it is surprising that the garden varieties come so true. Varieties would not be so numerous if we did not occasionally get a break, but taking them as a whole very little variation will be found among seedlings. For example *Pteris Wimsetti*, which is one of our latest additions to garden varieties of *P. cretica*; we now have some thousands among which there is scarcely the slightest variation. I also note the same results among large batches of *P. nobilis*, *Mayi*, and the ordinary crested form of *cretica*. The varieties of *serrulata* are rather more inclined to run out, but with care in selecting the best types for saving spores

from they will keep fairly true to character. With all the varieties of ferns it is necessary to select the very best plants for spores, the best fronds should also be selected for special purposes. Most of the pterises produce spores so abundantly that it often occurs they are used too freely when sowing; taking *tremula* as an instance, where they come up spontaneously they grow away freely, while where sown they frequently die off through being over-crowded.

In growing on young stock all those of the *serrulata* and *cretica* type may be potted in patches of several seedlings together, and will make good bushy stuff much quicker than when divided up singly. *Tremula* is perhaps best when grown singly, or at most not more than two or three seedlings together. *Argyrea* grows too tall and thin when done singly, but grown in patches of several plants together they grow bushy and compact. Though this is rather tender it is a general favorite. We often grow this together with other sorts. *P. straminea* is one of the best; a plant of each potted together. When large enough for 5-inch pots they soon make effective material for table and other decorations. *Argyrea* and

serrulata is another good mixture. Of the varieties of *cretica Wimsetti*, referred to above, will undoubtedly become a leading market fern; it differs from all other crested forms in having the pinnae broadened at the base, and cut down into irregular segments, and these are again crested lightly. The ordinary *cretica cristata* is a general favorite. *Nobilis* is a very distinct variety; the fronds stand up well, though heavily crested. *Albolineata* has come into favor lately, and *Mayi*, which is the best crested variety, is a general favorite. Of the plain forms *major*, or *Ovorardi*, is the most popular; in fact it is one of the best ferns for market at the present time.

Of *serrulata* there are some very distinct forms. I find a strong growing form which has not received a distinctive name is much appreciated. A very slender growing variety, *P. s. gracilis*, is very useful in a small state, but it is not suitable for anything larger than a 4-inch pot. The crested varieties of *serrulata* are too numerous to refer to individually, and most growers have a slightly different form of their own. Of *P. tremula* there are several varieties, *foliosa* being the best plain variety; *flaccida*, which

has the terminal pinnae elongated and slightly twisted is a fine fern, but it does not come freely from spores. *P. t. elegans* is a crested form with drooping fronds; when well grown this makes a beautiful plant. In *Smithiana* the fronds are heavily crested but stand erect.

Pteris umbrosa makes a fine plant where larger specimens are required. *Pteris Victoriana* is a very pretty variegated fern, and I thought at one time it would prove a good market variety, but somehow it does not go well. *Reginae* is a better grower and makes a well furnished plant, but does not come true from spores. *Reginae cristata* makes a fine plant, but we do not seem likely to get it in quantity, as it is only by chance we get a seedling. *Pteris bianrita argentea* is another pretty variegated fern; it somewhat resembles *P. argyrea* but is altogether of better substance, and I find it comes quite true from spores. It should therefore find its way into the market soon.

Pteris longifolia, when grown singly, is too thin, but grow three or four together and it is a most useful fern. The variety *Mariesi* is of more slender growth, and the fronds do not grow so erect; it makes a beautiful subject for the rock-fernery. *P. moluccana* is another fine species having long pinnate fronds which are gracefully recurved, the spreading rhizomes are particularly adapted for rock-work, but it is not a suitable fern for pots, or at least not for ordinary decorations.

P. scaberula, a slender growing species, when well done is very pretty, but it requires some care. It should be grown in a good loamy compost and requires plenty of drainage; as the roots are confined to the surface shallow pots should be used. This fern delights in a cool, shady position; when placed in heat it is sure to dwindle away and die.

All the free-growing pterises like a good rich compost, provided good loam and well rotted stable manure is at hand, and some good sharp sand. No peat need be used; one great point is to keep them potted on until they are in the size they are to be sold in, and after that, when the pots are well filled with roots, manure may be used freely, either liquid or any of the compound fertilizers. With fresh potted plants water should be used very sparingly, but after they are well established they will take a good deal of moisture. Some shading is necessary in bright weather, but light and air is quite as essential as it is for flowering plants. Failure among ferns may often be traced to heavy shading and over-watering; besides which, when grown in light and air they make much better fronds and last well when used for decorations.

DAVALLIAS.

Although these have not yet become what may be termed "popular market ferns," yet they are coming to the front, since others which make plants quickly have become so common, it is necessary to look for something fresh for choicer work. As the davallias require some time to establish good plants they are not likely to be grown in such quantities as to over-stock the market, and will consequently always command a fair price. Although all are very interesting, and I do not know of any that should be left out where a good collection of ferns is grown; it is only a limited number that are likely to be of much service for ordinary decorations, and these chiefly belong to the "Haresfoot" section.

The davallias though rather slow in making well furnished plants, are easily

QUEEN CHARLOTTE.

SOUTH PARK.

CANNAS.

propagated by means of cutting up the spreading rhizomes. They may also be raised from spores, though they do not come so freely as many other ferns. It is however, worth a little perseverance to raise seedlings, for they make much better plants. Some sorts are much inclined to vary; *Fijiensis* may be mentioned as an example, among a good batch of seedlings I have seen some very distinct forms. It would perhaps be difficult to improve much on the beautiful *D. Fijiensis plumosa*, yet some of the seedling varieties show greater vigor, and make well furnished plants. The old type of the haresfoot, *D. canariensis*, is a fine fern when well grown, the best variety of which is known as *gibberosa*. Of *D. dissecta* there are many variations, *elegans*, *rufa*, and *decora* all closely resemble each other, the last named has the largest fronds. All

have rather slender rhizomes thickly covered with brown scales. *D. Mariesi*, the Japanese variety, which has been imported at various times grown in fantastic shapes to represent boats, anchors, balls, etc., is a very free growing and elegant variety. It is deciduous, but the new fronds start away almost before the old ones have ripened off. *D. bullata* remains dormant much longer, the bright reddish brown rhizomes of this have some attraction even when devoid of fronds.

Of those which have the rhizomes covered with silvery grey scales, *Griffithiana* and *Tyermanni* are the best, the first named has the largest fronds. *D. solida* is another worthy of attention, it has large spreading fronds of a thick leathery texture, and makes a fine plant for hanging baskets. *D. ornata* closely resembles *solida*, *D. Mooreana* or *pallida*, as it is

QUEEN CHARLOTTE

CANNAS

SOUTH PARK

now called by some, makes a grand specimen; it is also a fine fern in a smaller state. I have raised this from spores, but have had many failures. Plants propagated from divisions make rather too large fronds to be useful for small pots, unless kept frequently divided before they get too vigorous. All of those referred to above make useful plants for decoration, and are equally suitable for the rock fernery. Grown in wooden or wire baskets they are very effective, and as pot plants they have few rivals; the smaller growing sorts may be particularly recommended for edging large groups of choice plants.

Culture: Mooreana succeeds best in a stove temperature, but all of the others will succeed well in an intermediate house. They should be grown in rough, open, porous soil, peat, leaf mould, and fibrous loam, with which may be mixed some broken pots, charcoal and sand. When grown in baskets, the baskets should be lined with sphagnum moss. I find all the *davallias* require more shade than many ferns, they also delight in a moist atmosphere, but after the fronds are well matured they stand well when used for decorations. A. H.

Trouble With Petunias.

Can you tell me why my double petunias turn yellow and lose their lower leaves? They have been given every attention. Can it be the soil? They used to grow all right in the clayey loams of further south, but here, get what mixture

one will, they will not do well. They have never been allowed to become dry or pot bound, yet the trouble is always there, and I have sometimes thought it might be a disease and threw out the whole lot last summer, but the new stock acts just the same. Ed.

Many of our finer petunias, both double and single, are sadly lacking in constitution, especially the double pinks and pure whites, and disease is very common among them. The leaves are curled, pale, marked with brown spots (fungus), which eventually destroy the leaf and even attack the stem.

I infer that your correspondent's plants were propagated last fall. It is no easy matter to winter such plants in good condition. During the dark days of mid-winter the growth is slow and feeble, the wood becomes hard and the leaves on the hard wood die of starvation. With the increasing sunlight of the last half of February the plants begin to feel the impulse of returning spring, and a stronger growth takes place. If cuttings are taken at this time and rooted quickly, fine clean plants can be obtained for spring sales.

Our best petunias are grown in rather a light soil. In wintering the plants they require a light airy place, care being taken to keep the soil moistened; but never "soggy." A shelf near the glass suits them admirably. We seldom attempt to carry over the plants, except it is an exceedingly choice variety that we wish to use in seed raising, as we get bet-

ter plants from seed, and the percentage of good ones is high.

If your correspondent will send samples we will be better able to judge of his trouble, and can then tell if his plants are diseased. J. F. C.

Buffalo, March 2, 1896.

Horticulture In Switzerland.

In Switzerland the federal government subsidizes two horticulture schools, one at Waedenschweil, in the Canton of Zurich, and one here at Geneva. The latter I visited the other day at Chatelaine, one of the suburbs of the city, and found it to be a most creditable institution where the same attention is given to the study of this science that appertains to medicine, engineering, etc. The buildings and grounds are well adapted to the purpose, and an excellent corps of instructors is in charge. The school, properly speaking, is a cantonal institution, and was established 1887. The terms of admission are similar to those of other cantonal educational institutions. Of the forty-two pupils attending during the past year sixteen only were Genevese, nineteen were Swiss of other cantons and seven from abroad, including one Russian, one Egyptian and one Bulgarian.

The course of study comprises three years, embracing during the first year one term of twenty-one lessons on botany and vegetable physiology, two terms of forty-two lessons on fruit and ornamental tree culture; two terms of forty-two

lessons on the culture of vegetables; two terms of forty-two lessons on floriculture; one term of twenty-one lessons on physics and meteorology; one term of twenty-one lessons on chemistry in general applicable to horticulture; two terms of forty-two lessons on geometry and surveying; three terms of thirty-one lessons on accounts; one term of sixteen lessons on horticultural zoology and two terms of forty-two lessons in drawing. During the year the pupils are divided into two sections which alternate with each other in mental studies and their practical illustration and application upon the grounds of the institution.

The second year's course of study is of a similar but more advanced character and includes also special courses of lessons upon the culture of the grape, bee culture and forestry.

The third year is given largely to floriculture forcing, vegetable pathology, seeds, horticultural architecture, reviews and practical tests. The detailed program of studies embraces seventeen closely printed octavo pages.

The Horticultural Society of Geneva and its organ the *Revue Horticole de la Suisse Romande*, whose editor is director of the institution, are among the firmest supporters of the school. Its graduates are always in demand and on the whole at their examinations attain high percentages in their studies. J. H.

The Retail Trade.

In a recent conversation with Mr. W. J. Smyth, a prominent south side retail florist of Chicago, he gave the following regarding his experience as to flowers that are in the best demand, style of decorations most usually called for, etc.:

As to the keeping qualities of the different carnations Lizzie McGowan is about the best white carnation we have, although a little weak in the stem, but if it is not cut too soon or left too long on the plants, it lasts well. They can then be kept three or four days in a dwelling house. McGowan is about the only white I handle because the others are not good; for instance Hinze's White is about gone. We have handled Silver Spray. When it is good it is very good but we have but a few. Tidal Wave when grown disbudded and with perfect flowers takes well and does so on account of it not being a scarlet or a pink; in other words, the color seems to take. What we need is a good scarlet. I think the color of the new Jubilee is all right. Portia is too small and Garfield is no good. I find Century a very good carnation. It has a good stiff stem and a good strong growth. I am not particularly partial to the color, but when there is no better what are you going to do? I find Daybreak when it is grown good and cold a very good carnation, but we need something a little deeper in the pinks. I consider Scott so far the best pink we have and it takes well. Have not tried Rose Queen. At the recent carnation exhibit at the club the pink that most impressed me was Della Fox.

In roses the call this winter has been for Mme. Testout. I find it to be one of the best roses to sell to people who want something that is not used on every table. The demand has been for a pink rose and we could not get enough of Bridesmaid. On several occasions we have used orchids this winter and with great success and satisfaction. The people are perfectly willing to pay what they are worth. Of course it is a question of a greater cost if you use as many as you would like to use,

COLUMBIA.

STELLA KANST.
CANNAS.

but it is very easy to arrange the matter of expense by not using so many of them. For instance, in a basket, use twelve or fifteen orchids and a great many adiantums. A similar basket of Bridesmaid would cost about the same and of the two they prefer the orchids.

Concerning reception work, this winter in arranging tables we have used tall vases with from eight to ten dozen Bridesmaid as a centerpiece. We use the Brides for an occasional wedding or dinner. The pink rose is the rose this winter. We have more call for that than anything else. As far as reception work is concerned, in regard to the table, we use a large vase and then about three small vases with from two to five roses in each one. For instance, if we had three vases, in one vase we would put about five, in one vase about three and in another about two. Then in the dining room, aside from that, about three dozen roses on the sideboard and with a palm or two about the room. They usually have musicians, so we make a screen of palms in the hall to hide them and then an occasional group about the rooms, and also something small in the way of Papa Gontiers or carnations for

the dressing rooms up stairs. There is very little decoration overhead and very little banking of mantels.

As to dinners, our work has been mostly in flat pieces, high enough to allow the guests to look across the table, making the bouquet very loose. We use very little green with the flowers aside from their own foliage. The ladies are not giving favors to their guests as they used to, and the tendency is to do away with the custom of putting a flower to each plate. Flowers are selected according to their season. For instance, in chrysanthemum time very little except chrysanthemums are used and after that very little besides carnations and roses. Now, as we are coming into the bulb season, nothing but the choicest kinds of carnations and roses can be sold. The people are getting tired of carnations and roses and are going in for tulips, freesias, daffodils, etc. Great quantities of violets have been used this winter. The demand is great for Harrisii and it brings good figures. It is used considerably for center of reception tables. Asparagus has been used a little; it is a delicate green and has to be used very carefully; an occasional string over a

COLUMBIA

SIELLA KANST.

CANNAS.

mirror or sideboard, something on that order. Heavy decorations are not used.

We do not make up anything any more unless in the case of funeral work. The better class of people are going in more for flat bunches of solid color. If white flowers are used they are generally tied with royal purple ribbon. Violets are very much in vogue for funeral work. A bouquet of orchids and valley tied with white ribbon is very handsome.

We do not make up any bouquets to carry any more. Ladies are putting a rose or two in their hair for theatre parties. When bunches are made up they are made of individual flowers of one color harmonizing with their dress. Lily of the valley does not sell very well. We have not had a great deal of it yet.

I think, in speaking of people outside of the city, it is a very good plan for them not to use perfectly fresh roses cut from the plants. I think it is well for the flowers to be cut at least forty-eight hours and put in an icebox or cellar (whatever their method may be for keeping them) and opened up in this way rather than be wholly developed while on the plants. A freshly cut flower put in a warm room is worse than a stale one. I have made it an aim in almost all my work not to send out freshly cut flowers. For instance, yesterday's stock I use today, and sometimes it is as much as two

days old. Then it is in its height. What is wanted by the people is effect of the flowers for that day and not for the next. Great care should be taken in arranging flowers. Each flower should show off for its own value, and care should be taken in not letting the flowers touch each other. In placing them let one be above the other. I claim that you cannot make a bunch of roses or put flowers together too carelessly; that is, combined with a little art.

There is a big call for violets. We paid more for violets this year than we ever did before. The margin is very small on violets. Another thing that I have always stuck to: In regard to putting flowers away get a proper vase for the proper amount of flowers. Don't put your stuff away in trays; put in water.

As far as baskets are concerned we don't sell a basket once a month.

We have had a very great demand for mixed ferns. We take these little shallow tins and put a cocos in the center mixed with a few ferns. We do not use adiantum as it does not last. The pan should be eight, ten or twelve inches. In the case of an eight-inch fern pan, where we use cocos, the price would be \$1; ten-inch \$1.50, and twelve-inch \$2. It pays about double what the material costs. If a party takes good care of them they should last six weeks, but most of

our customers order them once a month. They are placed in the center of the table.

Primroses or hyacinths do not sell well. Palms sell all the time. The demand is for those that sell at from \$2.50 to \$25; kentias sell the best. I would not recommend anything but kentias; either Belmoreana or Forsteriana. Arecas go to pieces.

I think my best success has come from the fact of not pushing my own ideas. Get your customer's ideas and combine them with your own. A florist makes a great mistake when he goes into a house and knows it all. The florist wants to be very accurate in receiving an order. When you go to take an order write down everything that is said to you. Customers do not say, "I am going to have a reception, go in and see what you can do," though of course it is often left partly to the florist. For instance, a lady says, "I want a nice vase here and one there. You know what you are going to have in your store, so get me up something nice and rich." Another point is, if a lady wants her order at a specified time let it be there punctually. However, if a lady has a reception from 3 to 5 and wants her flowers at 9 o'clock in the morning it is to the florist's advantage to talk her out of it. The flowers would be wilted by the time she wants them to look their best. I always try to arrange to get to

the house two hours before the reception in order to allow myself an hour and a half; same way with a dinner. Get the flowers there as late as you can and get the flowers on the table as late as you can without interfering with any of their plans.

Following up a similar line of inquiries with Mr. E. Wienhoeber, the leading Chicago florist on the north side, we noted the following:

Lizzie McGowan is the only white carnation I have handled this winter. Silver Spray cannot be grown well. Daybreak is the best keeper among the pinks. Tidal Wave is in less demand, though I see no particular reason for it. I do not handle very many Portia, as it sells poorly on account of stem being weak. I think that Scott is the best seller. For day work we prefer Daybreak, but for evening work we prefer the color of Scott. Daybreak is too light at night. Rose Queen is a good carnation and takes well.

Roses: The greatest call is for Bridesmaid. We sell 150 Bridesmaid to fifty Beauties. Meteor also takes well. The call for roses this year, in proportion to the call for carnations, seems to be an increase over what it has been before, the tendency prior to this having been in favor of carnations. There is an increased demand for orchids; the average price is \$10 a dozen for cattleyas. The demand for violets is still increasing.

For reception work our customers want loose flowers; sometimes we arrange them, sometimes our customers do. The general call is for flat baskets for reception tables. There has been a great call for white dinners this year; that is, decorations in white and green. Sometimes I have orders for mixed flowers, all colors, all kinds. But the demand is at least one-third for white flowers. For green we use adiantum. We use the adiantum plant bedded in moss. My plant trade has not been so great this year. There is not very much banking of mantels except in large houses. In large houses we depend more upon plants for the decoration. In a white dinner violets are used for favors, also lily of the valley.

For a recent dinner laid for eighteen plates, I used maiden hair ferns with cyclamens in a large silver bowl, and the

M. MESNIER.

CANNA M. MESNIER

MIDWAY.

effect was very pleasing. The cyclamens were put in among the ferns. *Harrisii* are very scarce and the demand is very good. There is an increase in demand over last year. I do not find an increase in demand for asparagus for use as green.

Glazing.

What is the best method of glazing a greenhouse roof? I have hard pine sash bars, butted glass, using Gasser's zinc joints. The difficulty I have encountered is in making putty or paint stick to my sash bars, and consequently I have leaky roofs. If I put on new roof—using cypress sash bars, with cap instead of putty, butt the glass, using zinc joint as before, shall I make any mistake? Can anyone suggest a better plan? Has a cypress sash-bar any inclination to spring or twist?

B. F. S.

Massachusetts.

Your correspondent B. F. S., who asks for information on this subject, says that his sash bars are made of hard pine—by that I presume he means yellow pine with a lot of pitch in it. If that is so it is very hard to get any material, either paint or putty, to adhere to it, as the pitch will keep working out in hot weather and forcing any covering off that may be applied to the wood. With such kind of bars and butted glass the best way to secure the glass would be with a cap piece screwed down on the mid-ribs of the sash bar. This of course requires at least five-eighths of an inch of wood between the glass. The cap strip should be made to fit fairly snug on this, and the sides should be rabbeted deep enough to allow it to fit down on the glass fairly snug. Then make the bottom light secure, so that it cannot get away from its place, matching all the other glass so that the edges come close together and all the bends one way, so that the edges all match as closely as possible, starting at the bottom and finishing at the top. Take the cap strip and screw it down on the mid-rib, using round head screws galvanized if to be had; the cap strip should be painted before using both inside and out. This plan does away with all putty, glazing points, etc., etc., except for the one bottom light in each row. Should a light of glass get broken at any time loosen the screws slightly on each side of

MIDWAY.

CANNAS.

it, taking the broken pieces out and slide the other glass down and put the new one in at top, screw the cap down again as before and the repairs are completed. The number of screws required in each cap will somewhat depend upon the size and strength of the cap. For an ordinary cap piece such as is sometimes illustrated in the advertising columns of this paper they can be placed about four feet apart. Be careful to bore the holes for the screws with a bit slightly smaller than the size of the screws. When complete give the whole a good coat of paint and you have a roof as light as is practical with butted glass and hard pine rafters.

Cypress is much better than yellow pine, but it will warp and twist somewhat out of shape if left loose for any length of time. In handling these it is much the best to give them a coat of paint immediately when they are received from the mill. Lay them down evenly as they are painted, with laths between each layer and a little space between each rafter to allow them to get thoroughly dry before using. When all is ready to put them in position on the roof they should be fitted and nailed fast as they are placed, and as soon after as practical glazed and held in proper position. Once there it will be no trouble to hold them straight. In glazing these if butted glass is to be used as above care should be used in making the specifications that the mid-rib should be not less than five-eighths of an inch wide and half an inch deep rabbet with the same one fourth of an inch wide slightly deeper on the side next the mid-rib, this works out from 1 1/4-inch plank and the cap strip should be the same width, to match it when screwed down.

Whether this system of glazing has superior merits or advantages over the lap system is a question which the advocates of the two systems cannot yet definitely settle for themselves, each having its particular merits and defects as almost all matters appertaining to greenhouse building has. If your correspondent wishes to glaze his roofs by the lap system then he will want to use the best putty to be obtained, adding to it one-tenth part of white lead, thoroughly worked through it. Use the best zinc triangle or brad points, whichever may be preferred and do not make the laps over a quarter inch wide. Bed the glass with the level all one way, so that the laps lay as closely together as possible.

MRS. F. L. AMES.

MRS. F. L. AMES.

CANNAS.

After glazing paint the whole inside and out with good quality paint and a good tight roof will be the result. To keep it so it should be painted two coats outside and one in at least every third year, covering every particle of wood and putty. The same rule holds good for every class of greenhouse structure. JOHN N. MAY.

Soil for Roses.

Replying to the questions contained in the letter of C. A. M., Knoxville, Tenn., in regard to proper soil for roses, mixing of same, etc., I would say that his idea about making compost heap is very good, but if he wants to use the soil in his benches right away the manure used should be fairly well rotted; the proportion suggested of one to two would be too strong for most soils, a safer plan to adopt would be one part manure to three or four parts turf. The proposition he makes to soak the compost heap thoroughly several times with water is not a good one by any means, to do so would make it unfit for use for a long time; at this season of the year our ingenuity is taxed to keep the compost heap dry enough for immediate use. The only way to get it in good condition is to turn it over and chop the sod as fine as possible, this accomplished it may be used at any time.

I would not advise you to try the experiment of killing the weeds and insects in the soil by closing the ventilators, turning on steam and trying to cook things, such a temperature as that suggested (210°) would be very hard on the paint in the house, and the chances are it would fail to do that which you expected. If the houses are detached they can easily be cleansed of all insects by fumigating with sulphur, but the fumes are death to all vegetable life, hence the need of care. Fresh cow manure may be used in making compost heap, but it should lay for at least two months and have one or two turnings before being used—manure that has laid on a heap for some time is preferable.

Bone meal may be mixed with the soil at any time as may be most convenient, I

OCTAVE MIRABEAU:
CANNAS.

always sprinkle it on the soil after it is in the benches and carefully mix it in, being certain then as to the amount that is used and also of its equal distribution. If the bone is free from acid or adulteration of any kind it is safe to use from 150 to 200 pounds to a one hundred foot house of the regulation width.

As to the question, "should sand, soot, old mortar, coal ashes air slacked lime or charcoal be used in the soil, and if so in what proportion," I would say that soot is a very good fertilizer, but should prefer to use it as a top dressing through the season, as the plants may show signs of needing it, sand would be useless

unless the soil is of a very strong clayey nature; old mortar having in it a good deal of lime may if broken very fine be good, but wouldn't go to any trouble to procure it; coal ashes are not desirable. Air slacked lime would prove a valuable addition to a great many kinds of soil, possibly to yours; it can be used at the rate of from 2 to 3 barrels to a 100 foot house; charcoal I have never used, and would not suppose that the benefit resulting from its use would be commensurate with the expense and trouble incurred.

As to the samples of soil received, would say that I can only express an opinion, if I was an expert in chemistry and could give the analysis of each, I might then speak with some positiveness. No. 1, should prove to be a good rose soil, (apparently); No. 2, might grow ferns or palms, couldn't recommend it however; No. 3, very peculiar, don't think it is good for anything, might try it however, as an experiment. No. 4, should be fair carnation soil. I understand from the letter that this soil is all from the woods, and on this account would advise you to use none of it, but to go out into a pasture that has been grazed with cattle for several years, sod of this kind, if of good quality, will surely grow good roses, but soil from under or in close proximity to large trees is of little value.

ROBT. SIMPSON.

Grafting Roses.

Seeing an article on the grafting of roses in a recent issue of the FLORIST it has occurred to me that there are many florists who have blank or naked walls in their houses which could be turned to good account by having a few strong plants of grafted roses on hand to cover them. Having them in good sized pots or boxes they could be moved in or out at pleasure.

My ideal of a stock for grafting is the White Banksia, or Lady Banks. A strong growing evergreen climbing variety, a species with all its native vigor. Small plants set outdoors in May will make strong vigorous plants by fall; our hot

CANNA GENERAL DODDS.

summers just suit them. Lift them in fall with all the leaves on them; after shortening and trimming them a little, shade and sprinkle for a week or two, when they quickly recover and soon become established in pots. Keep them till February in ordinary greenhouse temperature. Move them then into a little higher

temperature for a couple of weeks and prepare to graft. In grafting head down the plant to one and one-half inches from top of pot, take a sharp knife and split stock evenly and cleanly for one-half to three-quarters of an inch. Select a moderately ripened shoot, about the same as you would use for cuttings. Cut

off lower leaf, also base of cutting about one-half an inch from end. Take knife and open split in stock and slip in wedge end of cutting, put it down as far as wanted, a little more to the outside of stock than inside, tie with soft cotton cord and then bind on lightly a small handful of damp moss. Cover the top o

BED OF CROTONS AT GIRARD COLLEGE, PHILADELPHIA.

pot with damp moss and take a wide mouthed fruit jar and carefully set over graft. Now take three cane stakes and put around the jar triangularly and tie them to keep jar from moving. Leave jars over grats a week or two weeks if in a cool house; shade occasionally if sun is too hot; at the end of that time remove jars, take off moss and if strings are cutting in untie and tie again. Set jars over them again and leave a little air on at bottom; they will very soon unite, but be a little careful and not expose them too soon. The fact of their beginning to grow is the best test of success. When grafts have grown an inch or two and will bear exposure without distress take large pots or boxes that will hold one-half bushel or more and drain them well with large crocks, broken bones, etc.; then take sods fresh prepared for bottom of boxes and break up in pieces three or four inches square and build up till full enough to take plant, use some finer soil with a mixture one-third each coarse sand and well-rotted manure or coarse bone meal with sod, set plant in center with a good strong stake for protection; set away in a nice airy place, syringe often and water well when needed, and the growth will astonish you. I have often had them make twelve and fifteen feet the same season; such plants will make grand specimens for blooming the following Easter when handled right; \$5 would be a low price for such plants in full bloom, and they would bring it readily. Marechal Niel and Gloire de Dijon and a number of the newer noisette roses would be well adapted to growing in this way. Points of shoots can be pinched early in summer and several canes carried up if needed.

F. A. BALLER.

Crotons.

These plants have attracted more general attention during the past five years than ever before, just because they have asserted themselves by their own intrinsic worth to plant lovers at large; and it may not be amiss to give a few ideas as to how they may be used to advantage more generally in these days of progressive horticulture.

The Girard College grounds in Philadelphia have for a number of years been in the forefront in using to the very best advantage these tropical plants for outdoor decoration, and it is due to Mr. George Huster, the manager of the horticultural department here, to state that so far as is known he was the first to use them for outdoor decoration in summer in this country. When Mr. Huster first proposed to give them a trial he was advised by an eminent gardener to plant them in a shady place. It so happened that Mr. Huster planted some in a shaded position, some where it was partially shaded, and others in the full sun; and the latter made by far the best display before the end of the season. Mr. Huster stated that it is his firm belief that where coleus can be used successfully for outdoor decoration in summer time, the croton may with confidence be used for the same purpose. It is not safe to plant them out before the first week in June in the vicinity of Philadelphia, and not even then if the weather is not settled, that is to say, not until the nights as well as days are warm.

Many have failed with crotons because they have not taken proper precautions in the preparation of the plants. The hardening process before planting is one of very great importance, which is done by judicious ventilation of the greenhouse

in which the plants are growing, during the month previous to planting out. At every favorable opportunity air should be given, night and day, when the nights are not too cool. Crotons are much less sensitive to the chilly nights in the fall outdoor than are coleus. Mr. Huster admits that they are more or less subject to the scale insect, and that some varieties are more susceptible than others to the insidious attacks of this bane to many forms of plant life; but by a weekly application of tobacco water applied with a fine spray it may not only be kept in check, but entirely annihilated. If perchance, however, a plant becomes too badly afflicted, it is cheaper by far to destroy the plant entirely by burning.

Old plants may of course be used for bedding, but Mr. Huster raises a new batch of plants every year. He takes cuttings of good size from healthy plants in December, putting them directly into pots and in a close, moist temperature of from 75° to 80°. When well-rooted, a night temperature of 70° is high enough. Plants raised annually in the way above indicated make very beautiful beds, arranged and graded with the large sizes from the center down to the outer edge of the bed. A *Pandanus Veitchii* plunged in the pot was in all cases used by Mr. Huster as a center-piece; these of course had to have a good soaking with water every bright day. As a rule, Mr. Huster has so thoroughly systematized this branch of the decorations in the grounds that he used two kinds only in a bed, the one variety forming the bed proper and the other (of distinct coloring and markings or form, or both) was used as an edging. Thus a bed of *Queen Victoria* was edged with *Aurea Maculata*, the gorgeous *Day*

Spring was also edged with the Aurea Maculata, Baron Rothschild was edged with Irregulare, and Fasciatus with Newmanni. I also noticed some plants of Evansianum, which is another variety that may with confidence be recommended for bedding purposes hereabouts. There may be other varieties out of the long list catalogued that are suitable for bedding, which may only be determined by experiment, and it will no doubt be discovered by the same process and observation that in different parts of the country some varieties will be more successful than others. The results, if anything like what has been accomplished at the Girard College grounds and in Fairmount Park, will fully compensate for all the time and trouble taken to determine how far success may be attained with this most varied and distinctly beautiful class of plants for outdoor adornment.

Mr. Robert Craig, who has been making crotons one of his specialties for the past few years, has this to say about them:

"Our mode of propagating the croton is as follows: Put the unrooted cuttings in very light sandy soil, in 2-inch pots; and plunge in steady bottom heat of 90° and a top temperature of from 70° to 75°. They will be rooted in about three weeks, and should then be plunged in cocoa fibre or other light material, keeping the pots an inch apart on a table in the same top temperature but without the strong bottom heat. The advantage of plunging them is that the pots can be kept an inch apart without danger of tumbling over and the plants will then grow stocky. The advantage of rooting them in small pots is that they retain their bottom foliage better than when rooted in the cutting bed and then transferred to pots. Crotons furnish a range of brilliant coloring not found in any other class of plants, and are admirably adapted for bedding in the sunniest position. Exposure to the sun and air in summer time develops the bright colors. It is necessary, however, that they should be frequently syringed, which keeps down red spider and induces a healthy growth.

"Crotons are also well adapted for jardiniere plants and also for mantel decoration. The brilliant coloring produces an effect not obtainable in any other species. There is a great difference between a well grown croton plant, clothed with foliage to the very bottom, and one carelessly grown with more or less of the foliage absent. Whether crotons can be recommended as durable house plants or not can only be determined by an expert, but if kept in a temperature of 70° they will last at least a month or two; and produce as fine an effect as many kinds of cut flowers. As a jardiniere plant in a room nothing can be more beautiful, especially if the jardiniere is selected with a view to harmonious contrast. They can be grown in any good rose soil, well enriched with manure. The addition of a little bone dust seems to give a firmness to the stems and foliage.

"Among the very finest varieties are Czar Alexander II, Reedii, Thompsonii, Pictum, Etna, Charmer, Bergmanii, Day Spring, Sunbeam, Sunshine, Mortii, Lord Derby, Hawkerii, Massangeana, Alba Lineata, Lady Zetland, Gloriosum, Barryii, Mosaica, and Aneitensis; the latter variety is a compact grower with beautiful yellow foliage; one of the best for jardiniere. Of the older sorts which compare favorably with the newer varieties may be mentioned Queen Victoria, Andreanum, Baron Rothschild, Evansianum and Disraeli. The above are all

WILLIAM FALCONER.

SUPERINTENDENT SCHENLEY PARK, PITTSBURG.

showy broad foliaged varieties. Of the pendulous sorts may be mentioned Cronstadtii, which is one of the very finest, being of graceful drooping habit, with bright red, yellow and green foliage. Angustifolia is a variety with a very narrow leaf, it is exceedingly graceful, making a beautiful table plant, which may also be said of Superbus, Laciniatus, Mrs. Dorman, Chelsonii and Senitziana. The essential factor in growing crotons is a continual high temperature (not less than a night temperature of 70°) and regular syringing at least once every fine day.

EDWIN LONSDALE.

Our Parks.

In the dissemination among the people of a love for the beautiful in nature there is no greater factor than our public parks, and it is of the very first importance that they be in charge of men competent to give them the greatest possible educational value.

Unfortunately, in many cities political considerations have influenced the selection of park superintendents, and the result has always been disastrous to the best interests of the people and of horticulture. In view of this fact it is peculiarly gratifying and encouraging to see placed in charge of two of the leading parks of the country such thoroughly able men as William Falconer and J. A. Pettigrew, whose portraits we present in this issue. All honor to the men in power who made these wise appointments and who have thereby encouraged us to believe that real merit still carries weight in the selection of men to fill public positions.

While Mr. Falconer needs no introduction to the readers of the FLORIST, as one of the very best informed men on horticultural subjects in America, this is the first appearance of his portrait in an American horticultural paper, and we are sure the thousands who have known him by his

always instructive and helpful articles in the horticultural press will be much pleased with this opportunity to look upon his face.

Mr. Falconer was born in Scotland November 2, 1850. He began life as a gardener, serving a regular apprenticeship, and after being connected with some of the leading gardens in Scotland and England he went to the Royal Botanic Garden at Kew, London, and graduated from there in February, 1872. He then joined the editorial staff of the *London Garden*, and was its associate editor in 1874, when he resigned his position and came to America. Here he was first engaged by F. L. Ames at North Easton, Mass., and later he engaged in the nursery business in Texas.

In February, 1876, at the repeated urging of Prof. C. S. Sargent, he came north to accept the position of superintendent of the Botanical Garden at Harvard University. Shortly before this date the late Prof. Asa Grey had resigned from the directorship of this garden, and Prof. Sargent had been appointed as his successor. The latter had met Mr. Falconer in England some years previous, and knowing of his familiarity with such work as he would be called upon to do at Cambridge, was very desirous of securing his services, especially as he intended to remodel and modernize the garden. This work Mr. Falconer undertook and fully completed, so that in 1879 the garden contained 5,901 species of plants, representing 1,519 genera. Of these 3,641 were hardy and 2,260 species were tender. This was exclusive of grasses, sedges and other endogens. Mr. Falconer remained at Cambridge until August 31, 1883, when he came to Doris to look after the interests of Mr. Dana's great garden, which has been increasing in beauty ever since.

At Doris the prevailing idea was to get together as complete a collection of

J. A. PETTIGREW.

SUPERINTENDENT OF PARKS, BROOKLYN, N. Y.

plant life as possible, and every department of horticulture is represented on its 50 acres. Further, every specimen has been brought to the very highest state of development and its influence in the advancement of American horticulture has been marked.

In 1892 Mr. Falconer became the editor of *GARDENING*, established that year, though still retaining his position at *Dosoris*, and he has made his paper the most practical and helpful one ever published for the benefit of those who garden for pleasure, while professionals have also found it of the greatest interest.

Now he has been appointed superintendent of Schenley Park, Pittsburgh, where with the great natural advantages of the park, and the liberal spirit of its promoters, he will have opportunity to exert an even wider influence for good than before, and knowing him as we do we can assure the people of Pittsburgh and the horticulturists of America that he will improve his opportunities to the utmost.

John A. Pettigrew was born in England about 50 years ago. He is the son of a gardener and began his own experience in gardening when 10 years of age. At the age of 22 he came to Chicago and for 13 years following he was engaged in the various branches of horticulture, mainly floriculture and landscape work. He then entered the stone business and contracting, which he followed for a number of years, but returned to his first love again and was soon after appointed superintendent of Lincoln Park, in which position he made a most enviable record.

His varied experience in all the various branches of horticulture, coupled with a sincere affection for every tree and plant in his charge, his splendid administrative ability, together with his knowledge of landscape architecture as well as gardening, made a rare combination and enabled him to meet with brilliant success every one of the problems that continually

present themselves in such a garden as Lincoln Park. Withal he is a gentleman with all that the name implies, a botanist of ability and a close student of all that affects the profession he loves.

In 1894, through his failure to execute the wishes of a disreputable gang of politicians who had influence with the governor his resignation was demanded and received over the protests of every daily paper in Chicago, regardless of party affiliations, and despite remonstrance from all representative citizens. He then accepted an appointment as superintendent of the parks of Milwaukee, Wis., until called to the more responsible position of general superintendent of the parks of Brooklyn, N. Y., where he now is, and where he will surely do much to advance the interests of the "art that doth mend nature."

Carnation Rust.

Under the above heading in your issue of March 7 your correspondent "B." quotes the words of a grower on this matter and asks for more light. I recognize the words used and claim authorship to them, and would like a little space to enlarge on the subject. I speak after three years' experience with the rust, previous to which time I regarded the disease as a mortal enemy to the carnation and did all I could to prevent its introduction on my place. I sought nothing for fear of it and used copper compounds at short intervals as a preventive. But in spite of all precautions the rust came.

It first made its appearance in the field in the fall just before housing the plants and increased considerably in the houses. However, they were not bad and I resorted to the usual tactics recommended, picking off affected leaves, burning the plants that were bad, together with all inoculated material. We soon found that where the carnations were in a thrifty, growing condition the rust ceased to spread, and by spring there was little to be seen. We have started every year with perfectly clean plants, only to have the same experience repeated in the fall. I have ceased to regard it with any apprehension and have stopped burning plants and taking valuable time in picking off rusty leaves. I now look upon this latter course as a pretty sure means of increasing the evil, if evil it is. I also believe that the very means taken to eradicate the disease have done more harm to the plants in many cases than the rust itself. I repeat most decidedly that the matter has been exaggerated and dwelt upon out of all proportion to its importance.

Of course I admit it is not desirable to have on the premises, but it is not so bad as spot, bacterial disease, or even red spider; in fact it is the least to be dreaded of any of the diseases of the carnation. I am sorry to have to differ with Mr. Dorner, but this is simply an honest difference of opinion. I have a friend who compares rust on carnations to warts on the hand. Warts are not desirable, but I never heard of one cutting off the hand to get rid of them. Some cut them out with a knife, some use chemicals and some use incantations—the latter method is just as good as any, but most people let them alone. Now, rust, like warts, is only skin deep, and is not a constitutional disease. I have always had my doubts about the stated remedies being of any use in checking or eradicating the disease. I have used them faithfully, but have no proof they did any good whatever. On the contrary, there appears to be abundance of proof that the disease will appear and disappear (just like warts) in spite of so-called cures. When at Chas. H. Allen's place on Long Island we were shown two or three plants which he said were literally covered with rust when planted in the bench last fall. At the time of our visit search revealed one or two rust spots, but the plants were practically clear. No fungicide had been applied to them, they were simply syringed almost daily, and this seemed to be Mr. Allen's remedy for rust, although diametrically opposed to general opinion.

Mr. Dorner seems to have implicit faith in the copper compounds as a preventive. Several growers in this neighborhood are entirely free of rust and have never used anything whatever. Whether preventives are used or not I am inclined to look upon such cases as simply a matter of luck. I know of one place formerly badly affected with rust now entirely clear, the parties using Bordeaux mixture, etc., apparently proving the efficiency of such compounds. In another case the rust entirely disappeared without using anything at all. As Prof. F. C. Stewart told us at New York, the experiments have not been made under best conditions. "Those who tried the fungicides were so anxious to eradicate the disease * * * they did not take the precaution to leave a few untreated plants with which they might compare their treated plants in order to determine whether treatment was beneficial or otherwise. If the disease disappears under treatment such disappearance may be due to the treatment, or it may be due to something else."

I am not advocating the dissemination of diseases, far from it. Let us grow our plants in the best manner we know how and as free from all disease as possible. But I don't see why the vigilance of the buyer of cuttings should be confined to rust. I would rather have rust ten times over than cuttings affected with spot, or anthracnose, or a half dozen other things.

I am trying to treat this subject in a practical manner. The scientific side of the question is another matter. No one appreciates the labor of the savant more than I. But the laboratory is in one place and the commercial greenhouse another. The same methods that grew healthy plants a hundred years ago will grow them to-day. If one-half the attention and energy expended in fighting rust was exerted in the direction of growing the carnation under proper conditions and with the best care and judgment we would not hear so much about rust.

W. R. SHELMIRE.

Carnation Rust.

What is supposed to be the direct cause of rust? By whom was it first discovered, and what treatment were the plants given? Is the disease known to be from an internal source or an external disease?

If the disease can be proved to be in the constitution of a plant, would it not be advisable to experiment in soil, thus enabling a diseased plant to obtain its cure from the roots, which are the means by which a plant obtains food for its system? What conditions are most favorable for preventing its spread, a damp or dry atmosphere?

GEORGE BEAL.

After the very cloudy weather we were blessed with this winter, we again hear more of rust. In many places where watchfulness was lulled into security by a temporary disappearance, it broke out again, stimulated by the continued cloudy sky, preventing the full drying out of the syringed plants. And again with the advent of the promised remedy for extermination, rust is brought again more in the foreground, and invites discussion. The fear to compromise one's self by asking questions disappears more and more. But even with a remedy for extermination one does not lack in watchfulness, for if successful, it can not be accomplished, it will not be a fight for one season, it may take two or three, to eradicate it thoroughly from a place infested. But to come to the questions.

There is no more direct cause than the evolution of spores growing into plants, when chances are favorable, but the spore has to be there in the first place. Rust is a fungus parasite, and wherever it appears it grows from spores (seed). We have some plants of a very free seeding adiantum among our ferns, and I am some times astonished to see them appear in remote houses and damp walls, pots, or anywhere where the spores lodged and found a congenial place to germinate. The same with rust, the minute spores are carried by the air. It has been proven that rust will attack good healthy strong plants as well as the weak and impoverished, but will make better headway on a weak one, as there is not so much natural resistance.

Concerning the first discovery, I believe this can not be told with any certainty, Dr. Arthur thinks it is an importation, and I believe he was the first to examine and tell us what it is. Some assert it existed for years in parts along the Hudson and New England. Its origin will remain unknown, for with the reputation it

BENCH OF THE NEW CARNATION IVORY AT ESTABLISHMENT OF GEO. HANCOCK & SON, GRAND HAVEN, MICH

has, hardly any one will aspire to the honor of being the discoverer. But with a certainty we can say, that with the awakening of carnation culture, with the growing trade in rooted cuttings and plants, it found its spread all over the country. As for the second part of the question, what treatment the plants were given, I believe if plants had received the same careful proper treatment as they do now in many establishments, rust would never have advanced that far. The careless slipshod culture mostly practiced was a hotbed for rust, and is in some places yet.

The disease is from an external source—the spores—but its seat is internal, for its ravages are in the tissues of leaf and stem; but in the first place started from spores externally, for the spores when ripe are expelled from the internal seat of the fungus growth for distribution by the air.

I have said rust is a fungus parasite, and is not in the constitution of the plant; it only lives upon it. A few rust pustules will not incommode the plant, but when they multiply and take possession of the whole plant its existence is doomed. Further, what is food for the one is food for the other, so what may be killing to the one, will be killing to the other. We have no power to force anything into the system of a plant, for the plant has the power to discriminate, to select its food; and if applied in such quantities that it is eventually forced to take it up it means death. The arsenical solution, when it comes in contact with the open rust pustules, will kill the rust, but it takes the leaf also. From this we must infer, if we could force the plant to take up the solution through the roots, it would kill the plant with the rust. And again, I believe if a plant is very badly rusted, and the arsenic takes effect all over, it will kill the plant also.

A dry atmosphere will prevent the germinating of the spores. We see very little rust in the field, but find plenty in the damp houses. FRED DORNER.

Carnation Ivory.

We have received blooms of this variety from the originators, George Hancock & Son, Grand Haven, Mich. The color is a

soft ivory white, the flower very large and double, fringed, the petals grouped in a distinctive manner that gives a character of its own. Though very full the calyx seems strong enough to hold it without any sign of bursting. It is fragrant, though the perfume is not as strong and clove-like as in some other varieties. The stem, however, did not impress us as being strong enough for so heavy a flower. Still the flowers when placed in a vase carried well, and they remained in good condition several days in a warm room without special care.

Number of Plants for Regular Blooming.

How many carnation plants would be required to cut 1,000 blooms per week under the disbudding process? J. F. M.

Counting on a fair average for seven months from beginning of November to end of May, it will take about 2,500 plants, or an average of twelve blooms to the plant for the season. They should be good, strong plants and planted in rows twelve inches apart and ten inches in the rows across the bench, and may consist of different varieties embracing the range of colors. It depends what varieties are grown; if Scott or other varieties of same free-blooming quality it would not take as many. Again, it would be well to consider varieties that bring the highest price in the market; even if not as free-blooming they may pay better. I am of the opinion quality pays better than quantity. FRED DORNER.

Fowler's Solution.

Fowler's solution can be purchased at 15 to 20 cents per pint in quantity. The erroneous formula in issue of March 7 is evidence of the absurdity of attempting the work of a chemist by the uninitiated. Jackson, Ga. WM. I. WAGNER.

Grubs.

I have for quite a number of years been troubled with grubs in the soil, and that in such a degree that not only did they injure our soft-wooded bedding stuff but also some of the toughest perennials. I know them to have totally cut down strong plants of *Aster Novæ Belgii* and

Novae Angliae, as well as like robust perennials. As a last resort for preventing this wholesale destruction I bought a few barrels of burned lime that had been exposed to the weather for some time, and spread it over the beds about one inch thick, mixing it properly with the ground. During last summer I had no trouble with the grubs whatsoever. Light sandy soil is the home for grubs more than any other.

But it is not as an insecticide lime plays its great role in horticulture, its great action being to destroy the excess of vegetable matter contained in the soil, and to liberate the potash for the use of the

W. H. CHADWICK,
President Horticultural Society of Chicago.

plants by decomposing the silicate from heavy clay soils. The existence of lime in the soil is found by adding diluted hydrogen chloride (chloric acid) to the soil that we wish to analyze. If it starts to boil lime exists. The boiling is caused by the escape of carbonic acid that in the soil is combined with lime as carbonate of lime.

[AS. JENSEN.

Chicago, Ill.

The Horticultural Society of Chicago.

Of the younger horticultural societies of America probably none has done better work than the Horticultural Society of Chicago. It was organized in October, 1890, and is, therefore, not yet seven years old. Since 1891 it has conducted the annual chrysanthemum shows, which had previously been given by the Chicago Florist Club, and under its management the Chicago exhibitions have made most remarkable advancement. It was this society, in conjunction with a number of eastern gentlemen, that gave the World's Fair Chrysanthemum Show in 1893, and during August of the same year there was given under the auspices of the society a most memorable banquet to horticulturists, at which were representatives from leading European countries, and at which every important state in the Union was represented.

One of the most important factors in the progress of the society has been Mr. W. H. Chadwick, who was the society's first vice-president and is now serving his sixth term as its president. He is a member of a board of trade firm. In his con-

servatories at his home in Lake View is to be found one of the best collections of orchids in the west, and he maintains also the liveliest interest in all other plants and flowers. He is intensely enthusiastic in any movement for the advancement of horticulture from the esthetic standpoint, and devotes to the affairs of the society the same energy and ability that has built up his own business.

Mr. W. C. Egan, now serving his fifth term as secretary, has retired from active business and in summer devotes nearly all his time to his country place at Highland Park, where he has the most charming place around Chicago. It contains only six or seven acres, but every square foot is so utilized as to give the greatest possible variety of flower and foliage, all in harmony and without any apparent crowding. His beautifully kept place has done more to excite a love for garden effects among the residents of this suburb than any other agency could have done, and, indeed, it has exerted a much more than local influence. "Egandale" has come to be the Mecca of all lovers of ornamental horticulture in the vicinity of Chicago.

New York.

In some respects there is an appreciable improvement in business. This is most noticeable in regard to carnations, which when up to the modern standard of perfection in flower and stem, appear to occupy a stronger position than ever in the regard of the buying public. On Sunday morning last when there was a general call for carnations from various quarters it was noted that the Greeks had no difficulty in obtaining all the roses they wanted, and at Greek prices, in fact roses were forced upon them, as there was nothing else obtainable, and whole armfuls of Saturday's surplus were thus disposed of. Lilies continue plenty and prospects are that there will be an abundance of them for Easter, as all the growers seem to have their crops well in hand as to condition and time.

Easter plant growers are making calculations on a big demand. Dean Keller, Roehrs, Dupuy and other kings in this line have big displays of the regular favorites, and each has something in way of a novelty which he hopes may make a sensation, at the proper time. Pans of bulbous stock will be plentiful. Hyacinths promise unusually well. Roehrs has them in quantity and W. H. Siebrecht, who is also a specialist in this sort of goods will have an enormous production of hyacinths, tulips and daffodils for cut flower purposes. Mr. Siebrecht complains that some varieties of tulips, notably *La Reine* and *Cottage Maid*, are giving poor results this year, a condition attributable probably to imperfect ripening of the bulbs on account of the wet season in Europe last year. *Astilbe* is not grown so extensively as formerly, but Victor Dorval has a large quantity of the compacta variety which will be just in time for Easter.

Mr. Alfred Outram states that the canna is fully as popular in England as it is in this country, and there is every indication that its popularity as a forcing plant will greatly increase. It has a strong hold on the fancy of the British public. Cannas are not forced here for Easter to the extent that they will undoubtedly reach before long. There is a place for the shades of color which prevail in cannas and if attention is given to hardening off properly and growing such varieties as give greatest substance and

persistency in the bloom the principal objection to their use will be overcome.

Sprays of leucothoe from the south are rapidly coming into use among the better class of florists here and will soon be as staple a requirement as the galax leaves have become. They are used in combination with the choicest flowers, their rich purple brown tints harmonizing well with all colors. A. Warendorff uses them with fine effect in combination with longiflorum lilies, and given a bunch of Belle Siebrecht roses, a handful of leucothoe sprays and a roll of ribbon and the result from the hands of this artist is a revelation indeed.

After April 1 the store of Warendorff & Co. on Broadway will pass into the sole ownership of A. Warendorff, Warendorff & Co. running the 6th avenue store and F. Warendorff taking the 14th street establishment.

W. C. EGAN,
Secretary Horticultural Society of Chicago.

The upward progress in the Greek fraternity is shown in the new wagon which has been put on the road by Geo. Giatris, and which boasts all the glory of uniformed driver and footman, plate glass and decorations which characterize the turnouts of Broadway's finest establishments.

J. K. Allen got a surprise on the morning of St. Patrick's Day in the shape of a consignment from one of his shippers, the flower boxes having been painted a bright green decorated with golden shamrocks, with the American flag draped over all.

Ernst Asmus is cutting some splendid blooms of *Rodocanachi* roses. All that is lacking in this rose to make it absolutely perfect is fragrance.

Visiting New York: J. C. Vaughan, Chicago, B. L. Elliott, Pittsburg.

Philadelphia.

The March meeting of the Horticultural Society was most interesting, and those who failed to attend missed a rare intellectual treat. Prof. Bailey's paper on Von Mon's theory of production of varieties showed that the professor was not only well versed in that theory, but in all the others up to date. He handled his subject in a masterly manner, and was listened to with marked attention. After

the close of the lecture, in response to Mr. Wm. F. Dreer, he gave an interesting talk on seed or struggle for existence in the seed bag. He said that from the best data that he could get there were about five times more seeds produced than were required. A small portion are carried over yearly, and at least four times as many were planted as were necessary for the crops wanted. But it was a good thing that such was the case, as the weak stock was thinned out and only the best allowed to grow. He said that many plants, citing the watermelon for one, if one seed were planted and the product from this again planted, and soon during a man's lifetime, there would be produced enough seed to cover the entire surface of the globe with this one species. The seedsman by overstocking the market unconsciously raised the standard of their specialties, for while many more plants were produced than were needed, the grower would, even if a careless man, only keep the best, as he would always leave the best when thinning out, and thus carried out Darwin's theory of the survival of the fittest. When asked by Mr. Stokes about the strongest self-blanching celery not being the best, as it generally failed to blanch, he said that in the case of the celery where the stalks most likely to blanch were needed, then the best to be left were those of weaker growth, and his theory was correct.

There was a small exhibit of vegetables and some cyclamen and hyacinths for the \$35 in prizes offered by Henry A. Dreer. That there is more interest being taken in the society's work is evidenced by the large number of new names offered for membership.

Business goes along quietly, but has no snap to it; the weather has been wretched but seems now to be settling down a bit and the days are perceptibly longer. There is plenty of stock offered at about the same prices as last week.

The Easter stock is coming on, and most of the lilies appear to be all right. *Spiraea compacta* must be scarce on the other side, as several growers have discovered numerous substitutions in their stock of what they supposed to be all compacta. Growers say they have not many orders as yet, although Easter is such a short distance away. The production is so much larger now than formerly, the dealers hesitate to place large orders early, as there is plenty to go around and to spare.

The Gun Club had another match with the Hillside, who they recently defeated in a three match tournament, and again showed their superiority, defeating them by 12 points. Ten men shot on each side at 25 blue rocks apiece. Messrs. Anderson, Burton, Colfesh, Ball, Reid, Craig, A. B. Cartledge, T. Cartledge, Harris and Parks represented the Florist Club.

Philip Alburger has been on the sick list for sometime, but is now convalescing and hopes soon to be able to be about.

Harry Bayersdorfer will sail for Europe on April 11th. The bright geniuses over there will now begin to brush up their ideas on novelties. K.

St. Louis.

The regular monthly meeting of the Florists Club took place March 12 at Odd Fellows Hall and was well attended; the proceedings were of much interest to those present. Four new members were elected and reports of committees showed that the work on the next chrysanthemum show was progressing favorably.

A large show of new carnations were

on exhibition at the meeting; they were exhibited by Mr. C. A. Kuehn, who is representative for Mr. R. Witterstaetter of Sedamsville, near Cincinnati, Ohio. The show made by Mr. Witterstaetter's carnations was very fine; Miss Emma Wocher is about the finest pink seen here this season. Everybody admired it for its color and heavy long stems. He also had two named red seedlings called Jewel and President Sunderbruch. They were also very fine in color and size. Mr. Witterstaetter also had about twenty-five other seedlings not named, and everybody expressed the opinion that they were about as fine a lot of carnations as one would wish to see. Some fine Scott and Daybreak were also shown.

The St. Clair Floral Company of Belleville, Ill., had carnations on exhibition and showed some well grown Stuart, Uncle John, Scott, Daybreak and Albertini. F. Fillmore showed a large bunch of well grown mixed carnations. The president appointed a committee of three to look into the merits of the carnations. The committee was as follows: F. C. Weber, Henry Ostertag and F. Ammann of Edwardsville, Ill.

After this Mr. J. M. Jordan read a paper on his trip to Old Mexico; great interest was taken in what Mr. Jordan said.

The club's auctioneer, J. W. Kunz, having lost his rabbit's foot could not be present, and the club appointed Mr. J. J. B. to take his place to auction the carnations. On motion the club decided that next meeting will be a rose meeting, April 9.

Van Zonneveld Bros., bulb growers, of Sassenheim, Holland, were visitors at the meeting.

Trade in the cut flower line has been very good the past week, stock was a little scarce and prices were up a little above last week. Judging from the way the weather opened this week prospects are good for a bright and warm week. Easter stock is in good shape, there being plenty of it at all the growers', and from all appearances there will be an abundance of stock appropriate for Easter, both plants and cut flowers. For lilies \$10 to \$12 per hundred on plants or cut is the average price asked in advance by the growers. Commission men report business good, selling out clean every day with the exception of Harrisii. Violets were very scarce last week, owing to a snow storm in the South; home grown bring 25 cents. Roses of all kinds are not over plentiful and brought good prices, from \$3 to \$8. Carnations were sold in 1,000 lots at \$10 and \$1.50 to \$2 by the hundred. Harrisii are selling at \$6 and callas \$5 to \$7. Smilax is also in fair demand just now and sells as high as \$18. Daffs and Romans are selling at \$2 and \$3. Several spring openings of large millinery houses Monday kept some of the florists on the jump. Some had to work all Sunday afternoon in order to have everything complete early Monday morning, the Beyer Bros. having three of these decorations.

Ostertag Bros. made a very fine decoration at the Planter's Hotel at the banquet of the Knights of St. Patrick on St. Patrick's day.

Mr. Carl Beyer, Sr., has been very sick for two weeks, but is reported better.

Two more florists have offered special prizes for the show, Beyer Bros. \$25 and E. W. Guy of Belleville, Ill., \$10.

The Florists Bowling Club Monday night rolled three games. The following good games were rolled: In three games Beneke rolled 660, C. A. Kuehn was second with 529, and Fred C. Weber third,

528. The highest single game rolled was by Beneke, 241. Al Bauer was second, 224, and F. C. Weber third with 197. The club has selected the team that will roll the Magnolias, it is as follows: J. J. Beneke, F. C. Weber, Emil Schray, C. Beyer, D. Helwig, C. A. Kuehn, and J. W. Kunz. The match will be rolled some time next week. Three games will be rolled on their alleys and three on our own, and the wish of the club is that every florist who can come will be present on those nights. J. J. B.

Cleveland.

There has been a great deal of complaint for some time past among the florists here, over the condition of business. Everywhere one hears the same story, absolutely nothing doing. During Lent one naturally looks to see a considerable diminution in the amount of business done, but the dullness lately has been abnormal; whatever the cause the effect has been most unsatisfactory to everybody.

The only thing that hastened to at all enliven the prevalent apathy has been a small "war" during the week just past. We have with us a firm that properly is not in the business, and that during the spring glut handles out of town stock (it is believed that Chicago parties are the real sinners) at figures that legitimate florists cannot touch. It is of course true that the stock is old and should not be compared with the goods that florists handle, but some of it makes a fair appearance and the result is probably prejudicial to the regular florist. Be that as it may, a prominent local florist one day last week advertised the fact that on the succeeding day he would sell roses at ten cents per dozen. Anyone can see that there certainly cannot be one hundred and fifty per cent profit on each and every dozen sold at that rate. It is likely that the florist recognized that fact very shortly for at 9 a. m. the stock was not yet in. At 10 o'clock an inquiry elicited the information that it was all sold. The sale must have lasted about sixteen minutes. One of the local papers noted the "Flower War" and added the information that some of the stock that sold at ten cents was worth from three to five dollars per dozen! Thus does the populace live and learn.

Now while the writer does not care to express an opinion, yet there can be no doubt that the provocation to some such active as the above, is considerable and the initiative of this florist is liable to be followed by others. The outside firm that provoked the trouble is not supposed to make anything directly, being satisfied with the "advertising." It may be doubtful if it pays a high class firm to advertise by means of that quality of goods, but that is a matter that can concern no one but the principal party. What does concern the florist as a question of business courtesy, not to say honesty, is this point, whether or not it is good business morals to seek to make the florist bear the burden of somebody else's advertising.

Pressure of early spring work tends to keep down the attendance at club meetings somewhat, although, all things considered, the attendance is very fair. Business that comes before the meetings is largely of a routine character, relating mostly to the convention next summer, and at the present stage cannot be very interesting reading.

Mr. Smith, formerly with Gasser and more recently with Paddock, returns in a

week or two to Mr. Gasser. He is down east at present.

Herman A. Hart has gone to New York for a short time.

Mr. J. M. Gasser, whose health of late has not been the best, is at present sojourning at Hot Springs. It is hoped that he will come back much benefited.

Harry A. Bunyard, who came to the city last fall to go into business here, has severed his connection with the firm he entered, having received several more advantageous offers. It is probable that he will go on the road again so that those in the United States and adjacent countries who have been wondering lately where Mr. Bunyard was, will once more have an opportunity to gaze into his speaking countenance. Mr. Bunyard while here has made many friends. The same qualities that made them here, will make and retain them in his future field of labor.

In town lately, several Holland bulb men whose cognomens are beyond the orthographical capabilities of the writer.

The weather has been very favorable of late for the best development of Easter stock. The temperature has been moderate, with a large share of sunny days, so that the slight earliness of the date promises to be fairly counterbalanced unless the next week or ten days should bring us an unusual amount of bad weather. As far as Easter stock itself promises, there seems to be nothing out of the usual line to offer. There will probably be the usual stock for sale, in about the usual quantities. The outlook for business at that time—well, it would only be guessing at the best. It may show an advance over other seasons. There should be some natural increase, but there has been some increase in the ranks of the florists, possibly more than enough to counterbalance any accessions among buyers. The improved financial situation may also help us. Let us hope so.

Jame Eadie will build a couple of houses this season. The style and size will be determined later.

Mr. Barclay, representing John Gardiner & Co., has been in town lately. A.

OBITUARY.

WILLIAM BROWN SMITH.

The death of this well known and venerable gentleman occurred at his home in Syracuse, N. Y., March 10, after a few days illness. But a week previous he celebrated his 81st birthday and entertained his children and their families at dinner. For more than 50 years he was identified with the nursery and florist business, the name of Smith & Powell being well and favorably known throughout the country.

Mr. Smith was a fine example of that generation which alas is passing rapidly away. His strict integrity and business capacity was universally recognized and he held many important trusts, being vice-president of the Syracuse Savings Bank and a director of two other banks, besides being treasurer of many other institutions. He was a member of the firm of P. R. Quinlan & Co., in the promotion of which he took a great interest.

Of the great changes that have taken place during the past 16 years of my knowledge of the trade here I can see that much of the great improvement is due to his enterprise.

Mr. Smith, retained his faculties to a wonderful degree to the very last. At the annual meeting of the Central New York Horticultural Society last December he

was one of the most interested listeners of Prof. Beach's lecture.

In early life he saw the likelihood of Syracuse becoming a large city and he invested heavily in real estate, which has more than realized his expectations, and the firm has now more than 500 acres under cultivation.

He was of a kindly disposition, and many a man to-day owes his prosperity to the advice given him by Mr. Smith.

The funeral was held on the 12th and was very largely attended. The room in which the casket lay was beautifully decorated with palms, ferns, azaleas, lilies, etc., so the calm face rested peacefully amongst the flowers he had loved so long and well while the last sad rites were being performed.

There were many beautiful floral offerings chief amongst them bring a broken column 6 feet high, a large broken wheel and on the casket a magnificent bunch of orchids backed by palm leaves. H. Y.

WE ARE PLEASED to be able to report that President Scott is mending rapidly and will probably be able to use his limb by next Tuesday, though he will not dare to venture out of the house for some time yet, as he is still very weak.

FALL RIVER MASS.—John Warburton & Son are building a new rose house 30x125. This addition will give them a total of 15,000 feet of glass.

JERSEY CITY, N. J.—Mr. F. W. O. Schmitz is now fully recovered from his long illness with la grippe.

HESSION'S.

Clarkson St. above Co Bldg., BROOKLYN, N. Y.

Mention the American Florist when writing to advertisers on this page.

Baltimore.

The annual election brought out a full attendance at the last club meeting, pretty much every available seat being occupied. A stand in the center of the hall supported a vase of grand Della Fox carnations, sent for exhibition by the originators, and another, just inside the entrance, upheld a vase of very fine carnations and roses in numerous varieties, sent by Mr. I. H. Moss. Mr. Wm. Hess had two very large and full flowered plants of M. Louise violets on hand, to show what he could do in producing perfect flowers and foliage.

The election was not as hotly contested in any part as generally happens, there being no competition whatever in several cases, but the result seems to give general satisfaction and a feeling of hope for a prosperous and harmonious year. Mr. Fred G. Burger was elected president, Mr. Paul Binder, vice-president; Jas. G. Rodgers, recording secretary; W. A. Ekas, financial secretary; Wm. B. Sands, treasurer; Chas. Cook, librarian.

The reports of the various retiring officers and the executive committee showed a gratifying improvement in every direction over last year; membership nearly doubled and finances greatly bettered; so it was with a light heart and good appetite that all adjourned to the banquet, to partake of the good things provided by the committee in charge.

Mr. Wm. B. Sands was toastmaster, and, though as ever, brimming with wit and humor, and bubbling over with felicitious remarks, he was not by any means alone in his glory, for several other stars have arisen, and it is greatly to be regretted that the chicken story of Ex-Pres. Graham, or Bro. Flitton's eel worm, or Christie's reply can not be given verbatim as they were unexpected indications of the opening of an era of brilliancy in repartee and anecdote which will enliven the meetings of the club immeasurably.

The following members were out at the banquet, and from Brother Donn's eloquent grace to the very last remark of Committeeman Welsh, it was an event to be remembered with pleasure: Ed Kress, J. G. Rodgers, Robt. Graham, Wm. Shannon, Wm. B. Sands, Geo. Kalb, Jas. Simpson, Wm. Fischer, Jas. Pentland, Thos. Patterson, W. Richmond, Ed Montgomery, Paul Binder, C. M. Wagner, Wm. A. Ekas, F. G. Burger, I. H. Moss, John Donn, N. F. Flitton, Wm. Christie, J. L. Wagner, P. Erdman, H. Ekas, John Johnson, C. Hess, Hy. Fischer, P. Welsh, Theo. Eckhardt, P. Weidman, M. A. Hantske, P. Berkowitz, Ed Graham, Geo. Wipfield, N. F. Flitton, Jr.; Jas. Smith, I. Hertz, J. Immold, C. Bowen, H. Lea, Wm. McRoberts, Jr.; W. Hahn, A. Repp, W. McCormick, F. Bauer, A. Hartman, C. Bostner.

Complaints of dull business, slow sales and low prices are very general, both among wholesale and retail men. There is a great quantity of flowers of all kinds pushed off on a reluctant market every week. The only thing at all insufficient supply is smilax, which is quite scarce.

MACK.

After April 15th Next.

THOS. YOUNG, Jr.,
43 West 28th Street,
 NEW YORK.

Springfield, Mass.

Mr. Pierson, of Mitteneague, has put up a small greenhouse and intends to grow flowers on a small scale for people living near him.

Among the disasters of the recent high water was the damage done to greenhouses owned by Mr. Madsen, of West Springfield. They were completely under water, but were protected from being overwhelmed by a dyke. No damage to his plants was done.

E. H. Howland, of Holyoke, says the season's trade has been fine.

The Rosemont, owned by Taft, has fallen into the hands of J. Beach and E. D. Shaw. They have bought the whole property and intend to make a fine thing of it, and people who know prophesy a successful future to them. Mr. Beach has and is now to attend to the growing. He is a thoroughly competent gardener and has grown very fine stock in the past. E. D. Shaw, as heretofore, will see to the selling and placing of stock, in which branch he has been singularly successful.

Roses are doing well. Carnations are very short, violets plenty and bulb flowers in abundance. Trade has been fairly quiet, but bad weather has as much to do with this as the fact that it is Lent.

At a past social event the decorations were quite elaborate, and consisted of Harrisii and Brunners. A dinner given at the Nyasset Club was profusely decorated with scarlet tulips, and presented a gorgeous appearance. The centerpiece was a flat of the tulips, which was decorated in a pretty fanciful manner.

The Amateur Horticultural Society held a special meeting, the principal speaker being Rev. W. T. Hutchins, of Indian Orchard, the sweet pea expert. He spoke on floriculture as a popular art. He spoke of the different arts of to day, as music, painting, etc., but to his mind floriculture deserves the highest place. "We are to have schools in floriculture. Our children will be trained in it as much as in music. The recent crying question among florists has been how to increase the attendance and popular interest in the great flower shows. The interest is not to be kept up by more highly seasoned and sensational attractions, but floriculture must develop a new race of art lovers who can read and enjoy the language of flowers. A person might walk through Mr. Eckford's grounds, where his twenty years' work is all spread out, and say, 'Oh, these are mixed sweet peas.' But what a delight to one who has studied the flower to read it there in the best book of all the world."

The lecturer then went on to sweet peas for 1896, speaking of the new interest we now felt in Mr. Eckford since he now knows us in Springfield. Novelties are in danger of being a drug. At our July show we shall have an advance set of six Eckford's, which he has sent specially to Mr. Hutchins, and another set of six which are new to the trade this year. We shall have the Dwarf Cupid and six other American novelties. Besides these a number of trial sorts will be shown. This show comes the last week in July, under the banner of the Hampden County Horticultural Society. Very liberal premiums are offered. B. M.

You will benefit the American Florist by mentioning it every time you write an advertiser in these columns.

JOHN I. RAYNOR,

49 WEST 28TH STREET.

NEW YORK CITY.

Pittsburg.

Last week's snow, the deepest of the winter, and an all day snow on Sunday, has given the people the one good opportunity for sleighing; consequently everything on runners has been going double time this week, to the exclusion of other entertainment. Result is that trade has dropped very considerably; so much so, that the florists have experienced a dull week, and if it were not for the steady demand for funeral work, business would have been pretty flat, but as one expressed it, "We have had a good season right through, and we ought to stand a little dullness without grumbling." The growers are busy getting ready for Easter business and will be able, they say, to meet the increased demand. Mr. Fred Burki, of Bellevue, is furnishing very fine roses, equal to any, and his other stock is looking in good shape.

Mr. Chas. Konig, of Bennett P. O., exhibited several good seedling carnations. Among them was a white one which was pronounced as something extra — his regular stock is fully up to the standard.

Mr. Falconer, the newly appointed superintendent of Schcaley Park, was expected to arrive on Tuesday, but a letter from him stated he may not be here before the last of the month. He will receive a hearty welcome when he does come, and his fellow florists will try to make him feel at home.

Next week the regular meeting of the club will be held, when it is hoped that a goodly number will be in attendance, as several matters of importance are to be brought up which will make the meeting one of interest. Visiting florists will please remember that we meet on the second and fourth Thursday nights of each month and all are welcome.

Among the funeral designs made last week, one, a tribute to Clerk White, of Allegheny City Council, from the employees of City Hall, was furnished by G. Ludwig, representing a closed book on a desk. The cover was made of white carnations; the leaves of galax leaves; while the corners and back were of red carnations, imitating Russia leather; the word, "Closed," in purple immortelles.

On St. Patrick's day a new colored carnation was put on the market, and notwithstanding its dy(e)ing, was fresh and green when worn. A great many were sold, as we have a large Irish element here.

Mr. A. Patterson is confined to his bed, and has not been in town for over a week; his many friends wish him a speedy recovery.

Mr. John A. Shafer, of Carnot, Pa., has met with a very great loss, his wife dying on the 17th inst., in her 28th year. He has the sincere sympathy of the club in his heavy bereavement. REGIA.

Sample flowers mailed on receipt of 10 cents. CASH WITH ORDER.

F. BURKI, Belleville, Pa.

Buffalo.

Business boomed up quite a bit last week, owing to the Metropolitan Opera Co. which played here Monday, Tuesday and Wednesday, causing a large call for flowers especially Beauty, Jacqs and violets.

This is the season for store openings, of which Mepsted & Asmus had a large decoration the first of the week in the store of which they occupy a part. W. A. Adams decorated for another about the same time, it being a large one quite a number of palms were used in the job. There will be several other openings to follow.

Recent visitors in town: Dutch bulb men. Not a day goes by but what we receive a call from one, but there are others to come. One of the florists (although he would sooner be out) seems quite happy he has missed them all.

P. S.

Violets.

Fred Goldring, of Albany, N. Y., is admitted to produce some of the finest Marie Louis Violets in central New York. He attributes his success to careful study of the needs of this plant, which in the first place requires ample root room. Solid beds are the best with a depth of soil of 12 to 18 inches, with plenty of drainage beneath so that the plants can have all the water possible. A mixture of soil, part loam and part horse manure, loam as fibry as possible (turf laid up is best for this purpose). Let the plants be as near the glass as possible and run the houses at a temperature of not less than 45° at night and 60° to 70° in the day. Under these conditions failure is out of the question. M.

CANNAS

2 cts. Each.

CHARLES HENDERSON, deep vermillion

PAUL MARQUANT, salmon rose.

We have surplus of these two Cannas, and while stock lasts we offer them at \$2 per 100; \$15 per 1000.

VIOLETS.

Strong rooted runners, mostly with crowns.

DREER'S SPECIAL OFFER

OF

Decorative and Flowering Plants Suitable for Easter Sales or Decorations.

AZALEAS.

AZALEAS.

We can still furnish a fine lot of well budded Azaleas in bushy plants, from 12 to 15 inches in diameter, at \$9.00 per dozen, \$70.00 per 100.

DECORATIVE PLANTS.

KENTIA BELMOREANA.

6 in. pots, 6 leaves, 24 to 28 in. high, \$1.50 each.
6 in. pots, 6 to 7 leaves, 28 to 30 in. high, \$2.00 each.

KENTIA FORSTERIANA.

5 in. pots, 5 leaves, 18 to 20 in. high, 50 cents each.
6 in. pots, 5 to 6 leaves, 24 to 28 in. high, \$1.00 each.

LATANIA BORBONICA.

5 in. pots, 15 to 18 in. high, 4 to 5 leaves, 50c each.
6 in. pots, 20 to 24 in. high, 5 to 6 leaves, \$1.00 each.
7 in. pots, 24 to 28 in. high, 6 to 7 leaves, \$1.50 each.
8 in. pots, 36 to 42 in. high, 8 to 10 leaves, \$4.00 each.
The Latanias are not quite perfect plants, being somewhat damaged, but not so as to make the plants unsalable, and are of exceptionally good value, especially the plants at \$4.00 each, which are fine decorative stock.

ARECA LUTESCENS.

5 in. pots, 15 in. high, 3 plants in a pot, 50c each.
6 in. pots, 24 to 30 in. high, 3 plants in a pot, \$1.25 each.

PYRAMID AND STANDARD BAYS.

We offer a grand lot of these beautiful and useful decorative plants in the following sizes:

PYRAMID SHAPED PLANTS.

6 ft. high, 30 inches in diameter, \$8.00 each.
8 ft. high, 36 to 40 inches in diameter, \$15.00 each.

STANDARD SHAPED PLANTS.

Stems 4 ft. high, with fine, bushy, globular crowns, about 4 ft. in diameter, \$15.00 each.

HENRY A. DREER, 714 Chestnut St., PHILADELPHIA.

TRAENDLY & SCHENCK

38 West 28th Street, NEW YORK.

Worcester, Mass.

Although society has donned its sack cloth and ashes, trade remains surprisingly good, and with a plentiful supply of good flowers and fair prices we have no need to complain. Best carnations are still bringing 75 cents to \$1 per dozen, but they have to be very fine. Roses remain as usual \$1 to \$4, and other stuff at regular prices. Violets have dropped to \$1; bulbous stuff, with the exceptions of Von Sions, were rather slow.

The first exhibition of the season was held by the W. C. H. S., March 12th, and brought out some very fine exhibits of carnations, hyacinths, primulas and other spring flowering stuff.

H. F. A. Lange received first for hyacinths, carnations, azaleas and cut flowers; Wm. Darling first for cineraria, F. A. Blake for cyclamen, and Mrs. A. A. Hixon for calla.

H. F. A. Lange has just completed an elaborate plant for pumping liquid manure.

The Dutchmen are with us once more. Last week, Joh. Speelman, representing C. J. Speelman & Son, and H. von Teylingen, representing Van Zanten & Co.

A. H. L.

Los Angeles, Cal.

Andrew M. Garey has been elected Superintendent of Parks to succeed Elmo R. Meserve, resigned. Mr. Garey has been in the nursery business for many years, and is well qualified to accept the responsibilities of his new position. It is earnestly hoped the march of improvement in the various parks will accelerate under the new administration.

John J. Dean, foreman of Elysian Park, has resigned to go into business for himself near Redondo. Mr. Dean's many friends at Flatbush, N. Y., will be glad to know he is prospering and ere this appears in cold type will have become a Benedict.

E. R. Meserve, ex-supt. of parks, is busy as a nailer getting his city headquarters at 633-635 Broadway in proper shape to suit his esthetic ideas. It is predicted Mr. M. will make a great success of this branch of his business, as he has a host of friends in the city.

Fred Rafferty, of Santa Ana, is disposing of his large stock of tuberous begonias. He has not found them profitable to grow, and will devote his time to other specialties.

Lewis H. Conklin, the Broadway florist, has retired from business. W.

SACALINE! SACALINE! SACALINE!

No other forage plant has ever created such widespread discussion as Sacaline. Much that has been said of it, especially by the enemies of the plant, has been pure speculation. Facts are, however, becoming established and while it has not been proved that it will yield 180 tons of forage per acre annually, as claimed, yet the statement that it will become a noxious weed has been proved false; as it cannot be induced to produce seed with us. That cattle and horses will eat it, both in the green and dry state, without coaxing, has been conclusively proved also. Its ability to grow and flourish during prolonged drought, when all other

forage plants fail utterly, has likewise been proved the past summer—rendering it of value that cannot be estimated, in the West and Southwest at least, where the cattle

interests are so great. But discussion and difference of opinion will, we fear, continue for a long time—in fact we are very much afraid Sacaline will have many enemies, and from no defect in the plant itself, the true Sacaline; but by reason of so many seeds and plants of worthless kinds of Polygonum having been sent out for it. We have no way of knowing accurately but from the best sources of information at our command, we are forced to the conclusion that there have been more than double the amount of spurious plants and seeds distributed throughout the United States for Sacaline than there have been of the genuine species, *Polygonum Sachalinense*.

Home Grown Roots, Strictly True and Pure.

The accompanying illustration is a fair representation of the plants of Sacaline we offer. They are well developed roots with perfectly formed crowns and numerous large, plump, fully matured eyes. They are simply perfect. Best of all we know positively that every one is the genuine Sacaline. We have tested the seed we offer and know it to be the true Sacaline and fertile. This is why we cannot offer it at such low prices as some others. It has been re-cleaned and is free of husk or chaff—all pure seed.

Roots, 1.00, \$5.00, 1000, \$45.00. Seed, oz., \$100; ¼ lb., \$3.00; pound, \$8.00.

WALTER F. SHERIDAN,

32 WEST 30TH STREET.

NEW YORK.

New Single Violet Luxonne.

This variety is of French origin and was introduced into this country some four years ago by Mr. Francois Supiot, the Violet expert of Philadelphia, otherwise known as the "Violet King." It has, as Mr. Supiot claims, become thoroughly acclimated, and is without doubt, the most profitable single Violet grown. It is of the same size as the California, but appears nearly double its size, as all the petals open out flat, and has the advantage of flowering continuously from early in September until April, and does not come in crops like the California. It is of a beautiful rich, but soft violet purple color, with strong stout stems from 9 to 12 inches long, and very fragrant.

Shown in competition with well grown flowers of the California at the New York Flower Show last fall, it was awarded the *First Prize*.

We can fully endorse Mr. Supiot's description of the above and also his claims that it supersedes all other varieties now on the market. **\$2.00 per dozen; \$15.00 per 100.**

New Red Violet, Admiral Avellan.

Another French variety with distinct reddish purple flowers, entirely distinct from anything yet introduced. **\$2.50 per dozen; \$20.00 per 100.**

We have been appointed **SOLE AGENTS** by Mr. Supiot for the distribution of his stock, and are now booking orders for delivery **EARLY IN MARCH** for well established plants from 2 1-4 inch pots.

P. J. BERCKMANS,

Fruitland Nurseries

AUGUSTA GA

Boston.

The much dreaded period of Lent has already more than half gone and trade in general seems to have been affected but slightly up to the present time. This is probably due largely to the fact that Lent is early this year and spring appears to be late, so that the heavy spring crop of flowers has not yet materialized. But whatever the cause may be the result is certainly most satisfactory to all concerned excepting the street peddlers, who naturally are happy only when a surplus exists. Prices on roses have dropped somewhat and when they are of second quality they are with difficulty disposed of, but there is a fair demand for all the first class blooms offered. In carnations the situation is even better. Prices have never been firmer at this season of the year, and there is no excess of any color, whites especially selling briskly. Violets, on the other hand, are poor property, sales slow and prices way down.

The list of floral tributes sent to the funeral of the late Governor of Massachusetts at Lowell included twenty-five wreaths of all descriptions, sixteen bunches of roses, lilies, etc., five bunches of crossed palms with flowers, four mounds, four large standing crosses, three baskets, two pillows and one each of standing column, wreath on stand, tablet, arch, crescent and faith, hope and charity. The church was beautifully decorated by Galvin Bros. The front of the platform was hidden with an elaborate display of azaleas and palms, the columns supporting the organ were covered with lilies and the vestibules and stairways were lined on both sides with evergreens and bay trees.

On Saturday, March 14, Wm. S. Egerton, Superintendent of Parks, Albany, New York, read an interesting paper on park planting. There was a large audience present and the floral display was more extensive than usual. Mr. F. L. Harris showed the handsomest lot of amaryllises ever exhibited here. The varieties were Calabar, scarlet, Fresca, crimson scarlet, Madonna, white, veined red, Cupid, white, striped crimson and Olympia, an enormous bloom, vermilion with green and yellow midrib. James Comley showed some good roses, among them being the beautiful pink one named for himself. David Nevins staged his first lot of hybrid roses, which were of the accustomed high grade, and Carl Blomberg showed a collection of choice greenhouse bloom. Two seedling carnation were exhibited by F. A. Blake. The spring show will open on Tuesday, March 24, and continue four days.

 Cash with the order.

G. A. THIELE, Annapolis Junc., Md.

Toronto.

This month's meeting of the Gardeners' and Florists' Association will be principally devoted to "Ferns" and all the members have been asked to bring fronds or plants. An interesting meeting is expected. The 1896 chrysanthemum show prize list will also be up for consideration and adoption, the executive committee having recently revised last year's list, though very few alterations were suggested; further improvements will no doubt be made. The list will be printed and distributed as soon as it is passed.

The design trade appears to have been good all last week, but the general demand for cut flowers, though better than the week before, was slow. Bulb stuff is getting a little scarce and is bringing slightly better prices. Dunlop reports having some difficulty in filling large orders in this line, particularly in daffodils. He is sending in some very fine Brides now. The plant trade is much quieter, not much need be expected of it until Easter.

Although the weather still keeps cold there is now no lack of sunshine and this is making the quality of all flowers coming in very fine. There are a few Easter lilies to be seen about. I heard a week or two ago that some of the boys were likely to be late again with them, but with a continuance of this weather they ought to be able to get them in on time.

Mr. Wm. Campbell, for many years city editor of the *Toronto Daily Globe*, will be the editor of *The Canadian Garden* and Mr. Geo. Vair, the best known horticulturist in Canada, will be assistant editor and business manager. They expect to have the first number out some time in April.

Richardia Elliottiana, the yellow calla, is now in fine feather at the Steele, Briggs Co.'s greenhouses. It is a splendid thing, a good clean, bright color, and appears to be as floriferous as the common calla.

E.

ROSES, H. P. and Moss, 2 year dormant, suitable for 4 and 5-in. pots, per 100 \$6.

FLOWERS FOR EASTER

We have recently added many large growers to our list of consignors, and we shall have for Easter an

EXTRA LARGE SUPPLY

of the best the market affords, including **Plenty of Lilies.**

We can assure the filling in good shape of **all orders booked by March 28.**

We will make you the **Most Favorable Market Rates** and give our usual careful attention to packing and shipping at the proper time.

The indications are that flowers will be scarce for Easter, but owing to our having so many growers to draw from **We** expect to be able to fill all orders that are booked early.

Watch our adv. in the **Florist** of next week for latest particulars.

If our new catalogue of **Wire Designs** and **Florist's Supplies** has not been received, write for one.

Seed Warranty.

EDITOR AMERICAN FLORIST: The controversy recently inaugurated in the columns of the AMERICAN FLORIST bids fair to awaken a lively discussion on the important subject of seed warranty. From what has been said and heard it seems that the disclaimer as adopted by the Association in 1889 is to be considered to have outlived its usefulness, or have become objectionable in form and tenor—perhaps not high toned enough to answer the present purpose.

The form as presented by the committee was intended and so recommended to be printed on all, even the smallest, seedbags; therefore it was the aim to reduce, not to increase, the words, without in any manner lessening the effect of its intended purpose. I for one always considered it to be highly creditable to the three gentlemen who formed the committee to draft it. I doubt if an improvement in as few words can be made on it. Originally it was framed to guard against the unscrupulous, not against honest fair-minded seed buyers, who deserve all consideration, should errors occur; while for the evil intended no language too strong can be used. It is much better to give such undesirable customers to understand that they must bear the responsibility undivided, should any attempt of fraud be made in any false representations in regard to results of crops.

The adoption of the document was not made compulsory either to members or non-members of the Association, consequently there is no reason why any firm cannot clothe it with language more fit to their taste, the ultimate purpose will be protection. The question will be: Will it become more readily understood as it increases in words, or will it lose in effect as words increase? No doubt it will in the class it is to advise and inform.

It may not make a favorable impression on seed buyers receiving price lists with partly guaranteed assurances of the grade of seeds as offered for sale, while the seed bags containing such seeds are printed with the full text of the disclaimer, except the words: "and the money will be refunded,"—perhaps an error of the printer—as adopted by the Association. How such double dealing will bear on the intelligence of seed buyers, must be left to their own good judgment.

A return to the old warranty system, by any seed firm, at this time may become more injurious than profitable. Seed growers, merchants and planters have by the different unions become so intimately acquainted with each other that all secrets of trade are fully known by each other, so that any attempt in that direction would create an unfavorable suspicion. Self praise and over-done laudation are not the means to strengthen business confidence; yet no one can be blamed in placing the best foot foremost, if done in a graceful manner; it may lead the better to success.

R. M.

NEW ORLEANS, March 10.

CATALOGUE TRADE is reported as improving, and there is a brisk demand for grass seeds.

MR. LEW BOWEN, of D. M. Ferry & Co., was in Chicago March 14.

THE directors and employes of the Steele, Briggs Seed Co., Toronto, had a very pleasant social gathering at the conservatories of the Co., March 7, with music, dancing and refreshments.

THE slight redeeming feature in the dull mail trade which still continues, lies in a reported improved plant trade; just why this should be when the weather is too cold for the seed trade, puzzles the wisest. Trade must improve soon and very much to equal that of last season.

IN CONFORMITY with the joint resolution regarding gratuitous distribution of seeds which became a law without executive approval, the Secretary of Agriculture on March 18 issued a circular inviting proposals to supply about eleven millions of seed packets at the very early date of April 15.

San Francisco.

Some excellent Kaiseriums come from Mr. George Karmen's place. The trade in plants is not very brisk although some of the stores are pretty well cleaned out.

Frank Pelicano, of Kearney street, has been sick for the last week at his home. We are happy to learn that he is now on the road to recovery again.

The Misses Worn have opened up a very pretty store at 14 Post street.

The firm of E. & R. Mann, on O'Farrell street, has been dissolved by mutual consent. Mr. R. Mann will continue the business at the old stand.

The long looked for rains have come at last and all the seed growers are happy. Things were beginning to take on a serious aspect, because all the crops are several months behind already. At Gilroy this rain will be a boon. The onions, which were coming up, slowly began to turn yellow and burn, the same with everything that was planted late in the season.

Mr. Andrew McDonald has resigned his position with E. E. Eyre at Menlo Park.

Mr. Geo. Hillyer, recently of Chicago, has accepted a position with Mr. M. Lynch of Menlo Park.

The Santa Rosa Rose Society has about completed arrangements for their rose carnival in May. It is to last a week and from the program we believe that it is going to be a grand affair. The San Jose Floral Society also have nearly completed their arrangements, and already we can see signs of their labors in the decorative line.

Mr. Jos. Carbone is looking for a suitable place to grow his plant novelties. Mr. Carbone will be remembered as the originator of the "California violet" and he claims to have several other novelties which will become standard varieties.

The annual hyacinth exhibition of the California State Floral Society took place in the Maple Hall of the Palace Hotel and was a very creditable affair. Some finely grown specimens were shown by nearly all the members, and a few of the trade made appropriate exhibits. The next show of the society will be the wild-flower exhibition in March. METEOR.

Agents Wanted

by an important European seed and bulb growing firm, in the chief town of each of the principal states; must be acquainted with the trade. Address

EDWARD SWAYNE, CARNATIONIST

Kernell Squa Feb. 19th

Gentlemen.

We take pleasure in qual-

ing 25 our column indicates

and should like to draw you at

center particularly to Carnation

Elderado which we believe is

destined to take the leading place

among yellow, as it has shown up

equally well in ash & green and in the

market, bringing double the price of

ordinary varieties, also to Buttercup

Violet, which is making quite a

star in New England and of which

we have very bright clean stock.

Yours truly

Edward Swayne

Oxford Church P. O., Phila., Pa.
Mention American Florist.**

Verbenas.

What are the necessary conditions for raising healthy verbenas plants to be used as stock to take cuttings from?

SUBSCRIBER.

A new house in which verbenas or other plants have never been grown, perfectly healthy stock to start with, a good loamy soil; cool treatment, and an eye that will quickly discern the attack of any insect causing the rust, and a will to immediately throw out every such plant even though the grower thinks it might come all right; a little sulphur and oil on the pipes to keep down mildew; under these conditions we think Subscriber will have no trouble to grow the best verbenas.

J. L. DILLON.

Heating.

Referring to the inquiry of Mr. David Cliff about heating I would advise him to increase the size of the main steam pipe and the return pipe, especially where they connect with the boiler. We think this would obviate the trouble and make them work equally as well as before the old boiler was taken out. If the water should at times be higher in one boiler than in the other we would connect them on top, in front and back by a one and a half or two inch pipe; this will equalize the pressure of steam and the water in the boilers will remain stationary. A valve should be placed in each pipe so that either boiler could be run separately.

J. L. DILLON.

The Bridesmaid Carnation

is the pink carnation you want. It averages more HIGH GRADE blooms than any other pink variety grown. It has a long stiff stem, strong calyx, perfect form of flower and a color that cannot be excelled in its class. It sells quickly at a high price, and stands at the head of the list of pink carnations. It won the honors at the American Carnation Society Show at New York as best pink in classes A, B and C. Its growth is clean and healthy.

Order now to get your stock early.

IVORY CARNATION

This new white Carnation is pronounced by those who have seen it growing to be "first-class in every respect and an ideal commercial variety."

WE WILL TELL YOU SOME OF THE REASONS WHY:

1. Its **COLOR** is pure Ivory White.
2. Its **FORM** is perfect; petals nicely fringed.
3. Its **SIZE** is good, from 2½ to 3½ inches.
4. Its **HABIT** of **GROWTH** is unsurpassed.
5. Its **FRAGRANCE** is delicate and pleasing.
6. Its **CALYX** is strong, supporting flower well.
7. Its **STEM** is long, strong and wiry.
8. Its **HEALTH** and **VIGOR** are unexcelled.
9. Its **CUTTINGS** are abundant and easily rooted.
10. **LAST** and **NOT LEAST** it is so very productive that you cannot fail to have an abundant reward for your money and time if you TRY IT.

Read this letter and see what wide-awake florists think of Ivory:

GRAND RAPIDS, MICH., Feb. 17, 1896.
This is to certify that we, a committee of the Grand Rapids Florist Club, have inspected the house of Ivory grown by Geo. Hancock & Son, at Grand Haven, and find it free from disease, possessing long stiff stems, strong grower, very prolific, equal to Scott, good foliage, large sized flowers varying from two and one-half to three and one-half inches in diameter, nicely fringed, calyx shows no tendency to burst, pleasing fragrance and from its appearance is a continual bloomer. Cutting bench shows a loss of less than one per cent. Therefore, we believe it to be first-class in every respect and an ideal commercial variety.

Signed:—HENRY SMITH Pres.; GEO. F. CRABB, WM. CUNNINGHAM, Vice Pres.; N. B. STOVER, Sec'y; ALFRED HANNAH and J. A. CREELMAN.

Nice Plants of Ivory from soil \$10.00 per 100, \$75.00 per 1000.

Also nice stock of all the new and leading varieties, including Della Fox, Triumph, Jubilee, Armazinda, Abundance, Daybreak, Scott, Alaska, Goldfinch, Eldorado, &c., &c.

When you write to any of the advertisers in this paper please say that you saw the advertisement in the American Florist.

San Francisco.

The weather this week has been exceptionally warm. The demand in some things has been light. For instance violets are getting about over here now. Very few Californias are to be had. The warm weather is seriously affecting the quality of Marie Louise violets, the color getting very light. Swanley White are still very good. Lilac is expected to make its appearance this week, the warm weather also helping to bring it out. Good roses are in fair demand, Testouts especially being of good color now. Bridesmaids also sell well at 50 cents per dozen; Kaiserin, too, is very good. This rose seems to do very well here and is quite popular. Harrisii is of good quality and is bringing \$2 per dozen. Tulips are about over, but there is still call for them. Some sweet peas are coming along. At M. Lynch's place at Menlo Park can be seen some "Extra Early Blanche Ferry" in bloom out of doors. We believe that this is the first instance of sweet peas blooming outside by the first of March, showing that the above named variety is of exceptionally good value to florists. We think that this will be of interest to its originator, W. W. Tracy. In carnations Wm. Scott is a great favorite closely pressed by Daybreak. Portias are selling very well at 25 cents per dozen.

Luther Burbank, or, as he is called, the "Wizard of Horticulture," is hard at work at his place in Santa Rosa on some new French cannas, which he claims will surpass any of recent introduction. Another one of his novelties is a "thornless raspberry" and a white blackberry, each of which he has brought to wonderful perfection. His acres of lilies are all growing nicely and will be quite a rare sight when in bloom.

The Santa Rosa Rose Carnival is the talk of the town. Voting for the Queen of the Roses is going on quite briskly at present. Everybody is hard at work on their gardens trying to have as many flowers as possible. These flower shows or carnivals have done a great deal toward helping the trade in California. Everybody pays more attention to their gardens than heretofore, which benefits both florist and nurseryman.

Mr. Ed. Parsons, of San Jose, was in town this week. He reports business as increasing in his new store. He says the greatest demand is for carnations, the public taste running to light colors. He says Storm King is a grand flower, and expects to grow more of it next season.

Thos. Meherin, Jr., is now with the California Nursery Company at Niles.

The San Mateo County Rose Society will take its first step towards having a rose show in April this week. It is to be hoped that they will make satisfactory arrangements to do so, as the value of these shows as an educator in a floral way cannot be overestimated.

A once famous person in the trade in California, but now seldom seen or heard of is Ed Rainer, of Folsom street. Mr. Rainer is the oldest florist in California, and came here in 1849, when he established himself in business. He says that he often made over \$5,000 a month at his small place, but those days are over. He is nearly 80 years of age, but is still hale and hearty and loves his flowers. Some monuments to his handiwork are the Ralston place at Belmont and many other fine residences. He also laid out the grounds for Governor Morris's place in New York. METEOR.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

Carnations of the 19th Century

ARE . . .
DELLA FOX, pink, and ANNIE H. LONSDALE, white.

Can you, as a wide-awake florist, afford to miss them? They have received more premiums than any other carnations disseminated. The time is growing short for you to place your orders. Call and see them.

"That is as fine a batch of cuttings in the cutting bench as I ever saw," was the remark of H. W. Weber, of Oakland, Md., in speaking of Della Fox and Annie H. Lonsdale, on the 13th of March.

COME AND SEE THEM.

One Hundred Dollars in Cash Premiums will be offered for the best 50 blooms of **DELLA FOX** in the fall of 1896—divided in the four largest cities in the U. S.

ROOTED CUTTINGS. Price: Less than 100, \$12.00 per 100. 100 @ \$10.00 per 100. 1000 @ \$75.00 per 1000. READY MARCH 1st, 1896. ~~45¢~~ No orders will be booked unless cash accompanies order or satisfactory reference given. ~~45¢~~ Sample cut blooms will be sent to florists' clubs only on application.

MYERS & SAMTMAN, Wyndmoor, Chestnut Hill, Phila.

Seasonable Specialties

SPRING
..1896..

Raffia First quality long Madagascar, fresh consignment just arrived by the S. S. "Maine;" quality must not be confounded with the "short" stock offered in some quarters. Per pound 18 cents; per 100 pounds, \$15.00.

Mushroom Spawn The "W. P." brand, best in the world; always fresh, well spawned and reliable. \$6.50 per 100 pounds; \$3.50 per 50 pounds; \$2.00 per 25 pounds; \$1.00 per 10 pounds; 15 cents per brick; \$1.50 per dozen.

Cocoa Fibre The best material for drainage, raising seeds, etc. Per bushel, 50 cents.

The New Shipping Box for Cut Flowers

has now been a year on the market, and grows more popular every day. Extra strong for its weight, braced with cleats outside and inside; has strong brass corners; is the right size and shape for shipping or carrying long stemmed flowers. No. 1, size 36x12x6 inches, in sets of 3, per set, \$2.70; No. 2, size 30x12x6 inches, in sets of 3, \$2.55 per set.

Clay's London Fertilizer This world-famous fertilizer is indispensable to those who desire the highest perfection in their flowers, plants and vegetables. Composed of concentrated animal matter and entirely different from all chemical manures whatever. Per bag (112 pounds), \$6 00 net.

Guano—Genuine "Lobos" Imported from South America; offered in the original bags; no manipulation. Per ton, \$50 00; per lb (in less than 5-bag lots), 3 cts. Bags run from 170 to 200 lbs. each.

Gloxinia Bulbs Imported bulbs, very choice strain, embracing many rare and beautiful colors; large size and grand substance. I can recommend these as being extra fine. \$5.00 per 100.

Begonia Bulbs Grand importation of dormant tubers for Spring delivery from the best grower in Europe. No garden is complete without these magnificent new flowering bulbs, which entirely eclipse the geranium in brilliancy of bloom. \$3.00 per 100.

Lily Bulbs from Japan These are from the same reliable grower as heretofore, and can be thoroughly depended on. The cases are repacked on arrival and every bulb guaranteed sound. I offer these with every confidence, and know they will give good satisfaction. Note especially my very low prices for repacked and guaranteed bulbs. Auratum, \$4 00 per 100; Rubrum and Roseum, \$6.00 per 100; Album, \$8 50 per 100.

Other Spring Bulbs The cream of the new Cannas, choice named and mixed Gladioli, Tuberoses, Caladiums, Amaryllises, Dahlias, Montbretias, Paeonies, Tigridias, and other Spring Bulbs. Choice assortment at reasonable figures

F. Gonzalez & Co.

303 to 312 Wayne St., SAN FRANCISCO, CAL.

Rochester, N. Y.

Owing to unfavorable and cold weather the trade report of the past week can not be set down as very satisfactory, though, as the supply has not been over-abundant, not many of the cut flowers spoiled in the hands of the dealers, excepting, however, the unproportionate mass of bulbous stuff. Roses are improving steadily in size and color. Mrs. P. Morgan continues to sell well at the ordinary figures, retailing at the same price as good stock of other roses, from \$1.50 to \$2.50 per doz. Carnations are sold at all prices according to quality, common stock as low as 25 cents per dozen, and from that up to 75 cents for selected Daybreaks, Scotts and Helen Kellers. Violets are getting somewhat scarcer in the market, and retail at 75 cents to \$1.00 per 100. The plant trade is on the increase, a large variety is seen in all the stores; azaleas, however, take the lead and are very plentifully exhibited in good condition. Easter stock is backward in some establishments, especially is this the case with longiflorum, but it is hoped that the weather from now on will be more moderate, and a little extra heat assisted by the brighter days we may expect in the second half of this month will bring them out in time for Easter. Plant decorations are now called for principally on occasions of spring openings in our large dry good stores, but the safe transportation of very large decorative plants in such cold weather as we have had here, is only managed with the utmost care and difficulty.

A goodly number of the inevitable Holland bulb agents have been calling at the numerous establishments in town, among them were Mr. J. Speelman of C. J. Speelman & Sons, Herm. C. Baartman, K. Wezelenburg, M. Von Waveren & Sons, M. Veldhuyzen van Zanten, Van Zanten Brothers and others. Most of them find it rather difficult to obtain many orders as early in the season as this, and have to be contented with a promise to buy later on.

Keller Sons have moved into their new store at 25 North Clinton street, and opened up with a very creditable exhibition of spring flowers and other blooming plants. Both of the show windows were banked solidly with bulbs and valley in boxes or pans, interspersed with patches of spiraea, lilies, cinerarias, azaleas, genistas, acacias and cyclamen, while the space above them was handsomely festooned with long strings of asparagus, among which masses of Dendrobium Wardianum, D. nobile and cattleyas were suspended and showed off to advantage. One side of the store was devoted to larger plants of genista, azaleas, lilies, palms and foliage plants of various descriptions. Noticable among the plants exhibited were two large pans of Coelogyne cristata over two feet across, and profusely covered with bloom, also an extra large sized Cypripedium Boxallii with several dozen flowers. The display of cut flower on the other side of the store was very tasty and invitingly arranged, as also was the large ice-box with plate glass front, containing immense bunches of Beauty and other roses. In the evening the effect of the numerous incandescent lights, distributed all along the sides and ceiling of the store on the gay mass of bloom and green against the clear soft tint of walls and furnishing is very pleasing and was admired by every caller.

The polite Hollanders are beginning their operations early this season, several of them have been in town soliciting orders for bulbs, etc.

VAUGHAN'S SEED STORE,

CHICAGO:
84 & 86 Randolph Street

Brampton, Ont.

With the thermometer way below zero, accompanied by a stiff blow from the northwest, a country tramp is hardly appreciated, but the trip I made to Harry Dale is worth this and much more if but to see his 600-foot house. It is a fine piece of construction, light but strong, with cement walks through center and on outsides presenting a clean and durable path. This house, built to complete a range, while protecting the others, has a full exposure to the northwest, but at the coldest end there is not the slightest difference in the growth of stock; in fact Mr. Dale believes it is just as easy to run a house a mile long at an even temperature as one 100 feet long. He has demonstrated it by the magnificent roses he is cutting, chiefly Bridesmaids and Sunsets. In heating three rows of 1 1/4 inch piping is used on either side, with one 2-inch steam pipe which is also utilized for steaming tobacco.

Among the older kinds, Hoste and Wootton continue in favor, and are grown extensively and well. Meteor has superseded Jacks; in fact as grown here it would require an expert to tell them apart, judging by color alone. Of the newer varieties Mrs. Whitney is well liked, one bench grown for trial has given satisfaction, and more will be planted next season. Belle Siebrecht has not taken so well as anticipated, but as grown here it shows up well. It is alleged the color is hard to match.

In a lean-to erected last summer 200x10 feet, a fine lot of hybrids in boxes are in splendid shape for Easter. In the propagating house some 60,000 young stock, chiefly Teas, are in sand-bed, covered by an excellent method of shading, it is muslin attached by rings sliding on wire rods stretched crossways, very simple and effective.

In carnations Scott is great and Daybreak greater, while the newer kinds are watched with interest. Mr. Dale will not go back on a good thing when he knows he has it. Allen's Defiance mignonne is one of the best investments he ever made, an old rose house planted this season has given large returns, and now the second crop, which all know is not so good as first, is very satisfactory. The system of support used is by running strong wires lengthwise, then threading string crosswise diamond shape; it does away with tying and as the plant heads it pushes its way through and there it is to stay until cut.

Snow Crest daisy is another good thing and deserves pushing along, it is bringing 40 cents per 100 and sells well. M. Louise violets are very good, especially a bench planted after 'mums were taken out and that were grown in pots, although better returns are given from those that were planted out of doors.

I noticed a pretty lot of fern dishes made up for store sales, which struck me as being a good idea. The plants are put in earthen pans and kept in a low temperature so that the loss is practically nil, moreover the plants have that deep glossy foliage unobtainable in high temperature. The pans were made up very artistically which is a great factor in their disposal.

Queen Charlotte.....	7 00 per 100	(Stock Limited)
Ehemanni.....	6.00 per 100	
Other Sorts	\$3.00 to 6.00 per 100	

The new Carnation **ABUNDANCE** is well named.—A Bright Carmine Pink with a scarlet shading at times. A most abundant and constant bloomer both in winter and summer. The flowers are large and full, borne on good stems 12 to 14-inches long. Habit dwarf and an upright grower. Foliage clean, firm and showing the least trace of all fungus diseases of any sort we have seen this year; cuttings strike freely. Distinctively a **bread and butter** carnation and particularly valuable to retail florists who grow their own carnations, as with Abundance, you can have plenty of flowers all the while.

Rooted Cuttings, grown from our own stock, \$1.50 per doz., \$10 per 100, \$75 per 1000 (stock limited).

Abundance is just the thing for side benches.

STANDARD CARNATIONS.

 S. CRANE, Prop. NORWICH NURSERIES, Norwich, Ct.

Cincinnati.

The rose meeting of March 14 was the most attractive meeting this year. The exhibition of roses and carnations brought out the best growers of this vicinity. The rose display was the center of attraction, and as these shows are open to the general public many favorable comments were passed upon them by the ladies. One vase of Bride roses from H. L. Sunderbruch's was magnificent, and I doubt whether this rose was ever shown in better shape. A vase of the old favorite Marechal Niel from Fred Walz was also well done. In carnations a vase of 100 Emma Wocher from Rich. Witterstaetter caught the eyes of every visitor.

The show was pronounced a grand success. The following are those to whom certificates were awarded: J. Freis, Mermet rose and Albertini carnation; Wm. Murphy, Stuart, Bridesmaid and Portia carnations; Magrie & George, narcissus and hyacinths; J. Gouger, callas and geraniums; Hofmeister Floral Company, Perles Jardins; Thomas Jackson, callas, Silver Spray and Uncle John carnations; W. F. Law, Shelbyville, Ind., pot hyacinths; H. L. Sunderbruch, Daybreak and Scott carnations, roses Beauty, Morgan, Bride, Bridesmaid and Meteor; Huntsman Floral Company, Mme. Cusin roses, Harrisii lily and Emma Wocher carnation; Fred Walz, two certificates for scarlet carnation, seedlings, and Niel rose. There were sixty-four entries made.

In the evening the regular monthly meeting was called to order by President Gillett. Mr. H. L. Sunderbruch gave us a short talk on what he has seen at the New York carnation show. We had the pleasure of having with us Mr. Warder, superintendent of our city parks, also Mr. Theo. Bock of Hamilton. No special business was transacted and the meeting adjourned. The meeting, as usual here of late, was well attended, and it affords me pleasure to report that there is more enthusiasm shown among the members than ever before, and from all indications I may predict that if the boys will cling to the old proverb, "United we stand," at the end of the year success will crown our efforts.

Business of late has been moving along slowly, with nothing in particular to report, consequently prices have dropped considerably. There was a decided drop in temperature on the 11th and 12th inst.; on Thursday last the thermometer recorded 4° above zero.

One of Mr. C. C. Murphy's boilers burst during this cold snap. To him it was a memorable night, and he had to move out his cooking stove to keep the frost out of two houses until it was repaired. Chris. thinks it funny that such accidents will always happen at night.

Emma Wocher carnation will be sent out this spring instead of next spring, as stated in issue of March 7.

Mr. Albert Bruner has our sympathy in the loss of a bright little boy of 5.

Mention the American Florist when writing to advertisers on this page.

Always mention the American Florist when writing to advertisers.

Denver, Colo.

After having summer weather all winter it begins to look as though we were to have winter weather all summer.

Mrs. C. R. Gallup moved into her new store at 1015 Sixteenth street March 1. The location is one of the best in Denver. The interior is very tasty and neat and reflects credit on the good taste of Mr. Perry Gallup who designed the decorations and fittings. Mr. Gallup is erecting a small greenhouse on the corner of Fifteenth and Cleveland place for the sale of bedding plants and nursery stock.

Mr. John L. Russell, who severed all connection with the Park Floral Company January 1, and who was appointed Chief of Police March 1, has entered into his duties in his new position and is winning the praise of all good citizens by the strict and impartial administration of his department.

Mr. E. A. Beach has been succeeded as foreman of the Park Floral Company by Mr. C. A. Fawcett.

The Lewis Commission Company report a good demand for good flowers.

A fine collection of palms and decorative plants has been added to the already fine collection at the City Park greenhouses. The commissioners have let the contract and teams are at work excavating for the large lake near the center of the city that has been planned for some time. Mr. Graham, the efficient and genial superintendent of our city park system, is making elaborate plans for the summer and will undoubtedly add during the coming season to the extremely favorable impression his work has created in the past.

Mr. Charles Adams, who has been in charge of Mrs. Gallup's greenhouses at University Park for the past three years, leaves May 1 to accept the position of superintendent of the State Capitol grounds.

Mr. Ernest Flohr, of Colorado Springs, was a visitor in Denver the 8th.

The discussion of the merits of indoor and outdoor culture of carnations at the American Carnation Society's meeting was read with much interest by Denver florists, as indoor culture was first attempted here this season. The same diversity of opinion exists here that existed at the meeting of the society, but the general opinion seems to be that in Denver at least indoor culture is of doubtful economy, but that a better quality of blooms is produced by that culture at an expense of quantity. The experiment, however, has not been given a thorough trial and no one seems willing to give a decided opinion except as to McGowan; all who have here tried McGowan indoors agree that it is the better method of cultivation.

Mrs. R. Mauff is making preparations for the erection of an asparagus house 24x75, twenty feet high, and has just completed the installation of a new 100-horse power tubular boiler.

A bed of *Antirrhinum majus alba* in bloom at the H. H. Given Florist Company's greenhouses is a pretty sight. Mr. Given reports a good demand for the blooms at 6 to 8 cents each.

Benson & Crockford closed their city store last month.

Mr. John Berry has disposed of his interest in the Denver Florist Company and has accepted a position with the Colfax Floral Company.

When writing to any of the advertisers on this page please mention the American Florist.

Siebrecht & Wadley's

JAMES FROST,

Darke Co.

GREENVILLE, OHIO

Waterbury, Conn.

Mr. A. Dallas evidently does not believe in doing things by halves. Ten thousand dollars for a lot may seem rather a steep figure. Such, however, was the price which Mr. Dallas paid for an acre of ground on North Willow street, one of the finest and most desirable residence parts of the city. The property is a very valuable one and the most conservative real estate men regard the deal as a splendid investment and a decided bargain.

Mr. Dallas expects to do extensive building during the coming spring, of which I shall give a detailed account in due season.

R. S. Rasmussen, the Bank street florist will build an additional 30x85 house for carnations. The house will run east and west with the short span to the north; the glass will be 16x24, of double thickness. This will give Mr. Rasmussen a total of over 10,000 feet of glass. In addition to his building operations, Mr. Rasmussen intends to remodel his Bank street store, putting anything about the place in the best of shape.

What promises to be the largest individual rose house in the state of Connecticut, is now being built by Mr. Wm. M. Cuttle. The house will cover 325x26 and in point of construction and general equipment, will be a model. The glass used is 16x24, double thick. The house runs east and west with the short span to the north.

Thos. Stubbs has retired from the florist business, having sold out his stock, etc., to Mr. Rasmussen.

The bright weather of the past few days has somewhat broken the dull spell of Lent; business looks brighter and more encouraging. HOMO.

E. G. HILL & CO.,

Wholesale Florists

RICHMOND, INDIANA.

Chicago.

Market conditions remain unchanged; prices are the same as last week; both roses and carnations have improved in quality, but no one seems to be cutting an extra large quantity. The moderate cut, together with the numerous shipments, helps to keep prices stationary. Harrisii shows a stiffening in prices, and is likely to advance next week. The usual figure now is \$6. Easter prices are not yet settled, but lilies seem likely to be held at \$10 to \$12 all over. Tulips are poor, and daffodils still very slow. Violets are more plentiful.

The meeting of the Florist Club next Thursday evening, March 26, will be devoted to the violet. In addition to essays and discussions upon cultural methods there will be an exhibition of violet flowers and plants, including all the new varieties now being offered to the trade. Every one is invited to bring to the exhibition anything of interest in violets, and introducers of new varieties are invited to send a plant and flowers whether or not a special request has been sent them.

The South Park Commissioners have elected officers for the ensuing year as follows: Jas. W. Ellsworth, Pres.; E. J. Shumway, Sec'y; Jno. R. Walsh, Treas.; Jefferson Hodgkins, Auditor.

Henry H. Penshorn, a well known South Side florist, died last week, his funeral taking place on Saturday, March 14. The interment was in Oakwood Cemetery.

Mr. T. J. Corbrey has sold his commission business to a new firm, Winters & Glover, who will carry it on as heretofore at their present quarters. Mr. Glover was a member of the firm for some time before the present change.

Mr. John Warburton, of Fall River, Mass., was in the city Friday. He has visited Honolulu, San Francisco and Denver, and is now on his way home. Mr. G. Veldhuyzen Van Zanten, Jr., Hillegom, Holland, visited Chicago this week.

J. C. Vaughan is spending a few weeks in New York.

T. J. Corbrey has returned to California.

Dignify the Profession.

The florists everywhere should show to the world the extent and magnitude of our calling, and that we are proud of the fact that we cater to and encourage the very best sentiments and emotions of human nature, and that to be a florist we must be good.

R. B. C.

MARECHAL NIEL

MRS. J. P. MORGAN.

From the Retailers' Standpoint.

Extra large size, exquisite color, delicious fragrance, all combine to make a rose popular.

From a Growers' Standpoint.

Great freedom of bloom during the dull Winter months, when flowers are always scarce and prices high, make Mrs. J. Pierpont Morgan the most profitable rose to grow.

Fine young plants from 2-in. pots, \$12.00 per 100; \$100.00 per 1000.

The flowers from the Plants from which this stock is grown can be seen every morning at the New York Cut Flower Co.

Heating.

Noticing Th. Van der Meulen's inquiring we give you description of our heating apparatus, which may contain some information that he can make use of.

Our houses are so located that we cannot excavate over two and half feet on account of water. We use a thirty-five H. P. tubular steam boiler, which we got second hand, changing it to hot water by cutting two 4-inch holes for flows and two for returns, running flows across a twenty foot shed overhead into a 6-inch distributing main. Opposite each house (six in number, 20x100) an opening for 4-inch pipe is made. This pipe is carried overhead to the farther end of each house dropping down, connecting with pipes either under benches or on walls, grading all pipes under benches or on walls back toward boiler, return main being a duplicate of distributing main.

The returns into boiler have a perpendicular rise of two and a half feet directly under boiler. We have been using this system for four years, and it is perfectly satisfactory. We have made some change each year where we saw improvements could be made, and we think we have a very excellent apparatus. All our pipe is the regular cast iron 4-inch greenhouse pipe. With this system no pit for boiler is really necessary. By carrying the flow directly over head to the farther ends of houses we obtain an evenness of temperature that was not possible with old system. The overhead flow is hung on ridge piece by No. 12 wire put twice around pipe and through an iron staple so made that it can be fastened with 1½-inch wood screws to underside of ridge.

We use seven runs of 4-inch pipe to heat carnation house; the overhead flow and six returns. The one 4-inch flow will supply eight returns if it is needed; if 2 inch pipe is used double the quantity would be needed to give the required temperature.

The expansion tank (a coal oil barrel) is located directly over boiler and six feet above highest point of flows.

Hoopeston, Ill.

A. L. SHRIVER.

Pritchardia Filamentosa.

I would like some instruction about growing *Pritchardia filamentosa*. They do well enough with me in small pots, but after I repot them the leavesturn yellow and die. It is the same way with the young leaves that come afterward. I give the plants the same treatment as the other palms. F. W.

Pritchardia filamentosa (now known to botanists as *Washingtonia filifera*) is not a very satisfactory pot plant, and frequently suffers in the manner described by our correspondent.

This palm grows best in a somewhat lower temperature than is usually given to the ordinary trade species of palms, an average of 50° to 55° being sufficient for its needs.

The soil best adapted for its growth is rich loam of rather stiff character, and in repotting avoid disturbing the roots as far as possible, and also give but a small shift, as this plant grows rather slowly while in a young state. W. H. TAPLIN.

THE advance premium list for the 10th annual chrysanthemum show of the Society of Indiana Florists, to be held at Indianapolis, Nov. 10 to 14, 1896, has been issued. Copies may be had by addressing R. A. McKauley, Sec'y, Garfield Park, Indianapolis, Ind.

WISCONSIN FLOWER EXCHANGE.

(C. B. WHITNELL, PRES. AND GEN'L MANAGER.)

Wholesale Cut Flowers.

All varieties of Flowers in season. Prices adjusted to suit supply and demand. Prompt Service.

CARNATIONS, ROSES and CHRYSANTHEMUMS.

All the new and standard varieties at reasonable rates.

Biltmore, N. C.

Mr. George W. Vanderbilt has made great progress in the transformation of what was but recently a wilderness into what will be the most wonderful estate in this and, I venture to assert, any other country. A pen picture, however graphically described, would fail to convey even but a faint idea of the extent and beauty of this magnificent domain. Standing upon a mountain top on which is erected the mansion, which is approached from the main entrance by a winding drive of three miles, one sees on every hand splendid roads which form one of the great features. I am told when completed the total length will be 72 miles. Looking beyond the residence is seen an Italian garden, passing through which we come to the walled fruit garden. Beyond this and still descending by a succession of steps we arrive at the splendid range of houses erected by Lord & Burnham, the crests of which are just visible from the esplanade above. The houses are filled with the choicest stock under the care of Robt. Bottomly, who is justly proud of his charges. I could not refrain from measuring a fine Cocos Weddelliana, it stands six feet high and has twenty perfect fronds. Dracaenas are beautiful; amongst them is Shepherdii seven feet tall, perfect in every way. I mention these as instances of the extraordinary growth plants have made in the brief space of time. Big specimens of palms received from all parts of this continent are dwarfed in the fine banqueting hall sixty feet high, while the conservatory adjoining is 30 feet high.

At the nursery, situated in a valley some three miles from the hothouses, every tree or shrub that will thrive in this latitude is being raised. Mr. C. D. Beadle, who has charge of this branch, informs me it is the intention to create within a radius of twelve miles an arboretum which will stand without a peer, it is to be based on the order of the Arnold arboretum. Dried specimens of each kind are prepared, properly labelled and preserved in a fire-proof safe, some 25,000 being already finished. The collection includes Dr. Chapman's invaluable work. It is intended as an object lesson and promises to be the wonder in arboriculture as in horticulture of the twentieth century.

ALWAYS mention the AMERICAN FLORIST when writing to advertisers.

Neponset Paper Flower Pots

Manufactured Solely by F. W. BIRD & SON.

FROM THEIR CELEBRATED NEPONSET® WATERPROOF FABRICS.

For shipping of plants in pots, with intact root balls, they have no equal. For a pot cover in decorations, they are unsurpassed in cheapness. Bulbs and all soft-wooded plants which do not shun water agree well with this pot.

Cabbage, Tomato and Strawberry plants have been grown with success in these pots. Paper pots retain the moisture in the soil longer than earthen pots.

We are agents for F. W. Bird & Son, and always carry a limited stock at our store. If pots are ordered to be shipped by freight, 50 cents cartage must be added for each shipment. The Neponset Pots are manufactured of waterproof paper, are unbreakable, handsome, light, cheap and terra cotta color.

These pots come packed in light crates of always even contents as stated hereafter:

Prices are net spot cash, delivered at Factory, East Walpole, Mass., or from stock in New York (at our option). Less quantities than original crates are charged at 100 rates.

C. G. NANZ, Owensboro, Ky.

St. Paul.

The past week showed a drop in sales below the previous week. Cold weather, less funeral work and the quiet of mid Lent will account for it.

The Florist Society met at the West Hotel, Minneapolis, on Thursday evening, March 12th. The attendance was very light, and in the opinion of those present would not justify a continuance of the monthly meetings. The society adopted Mr. Swanson's suggestion for holding a fall exhibition, and the committee will proceed to solicit subscriptions and enlist assistance in forming a stock company.

Mr. Souden, with L. L. May & Co., exhibited a vase of Della Fox carnations from Myers & Samtman of Chestnut Hill, Phila., and many favorable comments were heard.

Mr. A. H. Bunde has a promising seedling carnation, a light canary yellow, splashed with carmine.

J. C. Robinson of Waterloo, Neb., was a recent caller. FELIX.

An International Gardening Exposition.

The 60th year of existence of the Hamburg Garteneau-Verein is to be celebrated in 1897 by the installation of an international exposition devoted to gardening in all of its branches, which will last from the end of April until September. It is proposed to include a spring exhibition of about five days' duration early in May, a summer exhibition, lasting about a week, in June, and an autumn exhibition in September, extending over eight or ten days, while various special exhibitions are to be arranged for the intervening periods, in addition to such features as are capable of continuous maintenance through the season.

It is to be hoped that American plant growers and dealers will be well represented at the exposition, not only by displays of decorative plants, but by those of other commercial value and interest. Roomy, well built conservatories are promised, and an adequate list of premiums and medals will doubtless soon be issued. Persons interested in the exposition are invited to communicate with Prof. Dr. E. Zicharias of the committee of arrangements, Hamburg, Germany.

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafters, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

You will benefit the American Florist by mentioning it every time you write an advertiser in these columns

Grand Rapids, Mich.

The Florist Club held an enthusiastic meeting at their new quarters in the Eagle Hotel, President Henry Smith in the chair. The attendance was the largest of the year. J. A. Creelman read an instructive essay on fuel, stating there were seven methods of heating greenhouses: wood, coke, coal, gas, oil, peat, and last but not least to be considered, electricity. It was followed by a general discussion, Geo. Crabb stating that crude oil was preferable if to be had at a reasonable price; that with this kind of heat better plant growth was made. J. K. Johnson gave his satisfactory experience with smokeless coal.

There was a general discussion on floricultural societies, their aims and objects, and from the number taking part in the discussion it would show that ours was a very much alive society. It was decided to hold the next chrysanthemum show November 10 to 14 at Lockerby Hall, M. B. Stover secretary.

Mr. Chapman exhibited a vase of well-grown Daybreak carnations. Mr. Crabb, Mr. Cunningham and President Smith also had vases of carnations, hyacinths and swainsona on exhibition.

The general committee will meet next Thursday evening with Mr. Crabb and decide who will aid them in the fall show. After a lively three hours session the club adjourned. EVELYN A.

Heating.

GENTLEMEN:—Can any reader of the FLORIST tell me whether it will work all right to place boiler 150 feet away from the houses it is intended to heat with hot water. The leaders to be 4-inch pipes running through connecting house covered with asbestos, the heating pipes to be 2-inch. I can give a rise of about 4 feet from boiler to place of connecting the house pipes.

How many runs of 2-inch pipes are necessary to heat a house 18 feet wide by 13 feet to ridge by hot water without pressure for roses? EMIL BUETTNER.

Coming Into General Use

. . . IS THE NEW . . .

Automatic Gable Ventilator

WHY?

- Because they give entire satisfaction.
- Because they are $\frac{1}{3}$ to $\frac{1}{2}$ cheaper in price.
- Because they are made simple and strong.
- Because they operate your house from either end or centre.
- Because they operate houses 200 feet long with ease.
- Because one machine operates sash both sides ridge.
- Because they will last for years without any repairs.

We guarantee any breakage during five years' use. Write us; we will furnish you references, circulars, estimates, and save you money.

News Notes.

GLOVERSVILLE, N. Y.—G. W. Pool, Jr. has just finished building a greenhouse.

HOLYOKE, MASS.—The "Rosemount" greenhouses of E. C. Taft have been sold to J. W. Beach and E. D. Shaw.

HOLYOKE, MASS.—On the evening of March 5 Mr. H. R. Smith addressed the Horticultural Society on hardy roses.

NORTHAMPTON, MASS.—The Horticultural Society will hold a spring exhibition in the City Hall on March 25th and 26th.

WELLSTON, N. Y.—The building in which was located F. V. R. Stillman & Co.'s branch floral store was burned on March 5th.

BENNINGTON, VT.—L. C. Holton has purchased the business of the firm of L. M. Holton & Son, of which he was the junior member. The business will still be carried on under the old firm name.

RAHWAY, N. Y.—The steam boiler in greenhouses of George Harvey exploded on the evening of March 8th, completely demolishing the building and ruining the contents. Loss estimated at \$2,500.

TERRE HAUTE, IND.—Cards are out for the marriage of Mr. Charles A. Hunt, second son of the late M. A. Hunt. The bride is Miss Grace King Button and the date for the wedding is March 31.

COLUMBUS, O.—Hatton Bros. are putting in a cut flower department in connection with their drug store. Karl Brown is manager and is also interested. He was formerly with A. W. Livingston Sons.

NORTHAMPTON, MASS.—The statement that Jas. A. Fitzgerald is to take charge of the greenhouses and grounds at Smith College is an error. Mr. Edward J. Canning is still head-gardener and Director Wm. F. Ganong states that no change is contemplated.

News notes	966

PRESIDENT SCOTT is improving rapidly,
and it is now expected that he will be able
to be about again by Easter.

San Francisco.

Trade the past week has been rather
quiet, nothing of much importance going
on. Prices are a little low, although in
some things they hold up pretty well; this
is especially true of roses, which seem to
hold their own very well so far. Harrisii
is selling very well at \$2 per dozen.
Nearly all bulbous stuff is over for the
season. Carnations are of very good
quality, Scott in particular is a great
favorite in the market this year. Smilax
is rather scarce, although there is lots of
asparagus to be had. We note some very
excellent peonies in from some of the
growers. They are of an immense size
and bring \$3 per dozen.

Poor Growth of Roses.

A subscriber from Iowa signed B. wishes
to know what is the matter with his
roses; they were planted in August in
solid beds, have been given a night tem-
perature of 58° to 62°, were given what
was considered good soil, and have had
the best of treatment, but have failed to
make a satisfactory growth. Considering
the long journey, the specimens
arrived in a very fresh state. The Bride
and Bridesmaid marked No. 1 did not
have a very sickly appearance, the foliage
though small was clean and bright, and
the roots appeared to be perfectly healthy.
Considering the length of time they have
been planted they should have made a
stronger growth. The indications are
that the soil is impoverished, the tempera-
ture also is too high; 58° should be con-
sidered the maximum night temperature.
Would advise the feeding of these plants
in a systematic manner, unless B. is cer-
tain that there is no lack in this direction;
being a practical rose grower with con-
siderable experience, it will not be neces-
sary for me give any directions as to what
fertilizers should be used and how to use
them.

The Perle plant, though otherwise
healthy, was slightly affected with an-
thraxnose, not so bad but that it might
be cured by a few applications of the
ammonia-copper solution. The formula
I have used for the past five years was
recommended by Prof. Halsted of the
New Jersey Agricultural Experimental
Station and has proved generally satis-
factory. It consists of ammonia (FFFF)
one quart, carbonate of copper 3 ounces,
water 24 gallons. Syringe the affected
parts thoroughly once a week.

The Bride and Bridesmaid marked No.
2 and one of the Cath. Mermets had the
roots completely matted up with eel-
worm; it is hardly possible to restore
such plants to health, the specimens sent,
however, were probably the very worst
plants that could be found, in which case
it may be worth while trying a little ex-
periment. So much has been said on the
subject of eel-worms and their origin, and
so conflicting are some of the statements
made that one feels afraid to venture so
much as a suggestion. Some time ago I
came to the conclusion that the eel-worm,
though a swimmer, did not enjoy too
much water, he is at home on high dry
land; and seldom takes up his abode
where opposite conditions prevail; in

other words, eel-worm is seldom found in
soil that is naturally wet, at any rate this
has been my experience. I have known
plants that were badly crippled with the
pest restored to health and vigor by a
persistent application of the cold-water
cure. It seems contrary to common
sense to drench plants every day and ex-
pect them not only to survive the ordeal,
but to commence to thrive, yet such has
actually happened. However so late in
the season there is comparatively little
chance of getting much from plants badly
affected, and the wisest course to adopt
now will be to make sure of healthy
stock and clean soil for next season.
Cuttings from diseased plants can not
reasonably be expected to be in good
health, and soil that produced the pest
this season may be expected to do the
same next if used. ROBT. SIMPSON.

Black Specks on Rose Foliage.

Enclosed find a rose leaf full of small
black specks. I would like to know
what it is. Through a small glass they
look like small puff balls. They have
spread all over one bench of plants, but I
can't see that they have injured the plants
yet. C. H. HOLLIED.

Kansas.

I have seen small black spots on rose
foliage similar to those above mentioned,
when the atmosphere in the house was
heavily charged with ammonia, as
happens sometimes after mulching with
too fresh or fiery manure. If this has not
been the cause in the present case I am at
a loss to account for it, but in any event
I think there is no cause for alarm.

ROBT. SIMPSON.

Soil for Roses.

I would like to have the opinion of a
rose grower on black prairie soil for roses,
that is rotted sod from such soil with a
third cow manure added. Would it be
suitable for such roses as Perle, Bride,
Wootton, Bridesmaid, Meteor, Hoste,
Sunset and Beauty? It seems to become
exhausted very quickly. MANAGER.

I have seen very good roses growing in
the loose black soil found in some parts
of Illinois, but it is not considered an ideal
soil for roses. As "Manager" says, it
quickly becomes exhausted; it also lacks
the adhesiveness which characterizes good
rose soil. A brown or yellowish loam
more inclined to clay than sand will gen-
erally produce the best results. Where
the soil is in a fairly rich state it will not
require so much manure as one-third,
especially if the latter is of good quality;
a better compost would be three or four
parts sod to one part cow manure.

Soil in our business is of the first im-
portance, and yet we have known of men

investing large sums of money in greenhouse establishments, erecting the best of houses, with every convenience and improvement that could be suggested, and who have found out afterwards to their cost that the soil nearest to them that was fit to grow roses in was distant from the greenhouses several miles. It seems to me that our first thought in projecting a new greenhouse plant should be, "Is the soil adjacent to me suited to the requirements of the plants I expect to grow?" And unless we are able to answer in the affirmative, no matter what the other inducements may be, it will be good policy to locate elsewhere where the soil conditions are favorable.

ROBT. SIMPSON.

Fowler's Solution for Carnation Rust.

I do not wish to be hypercritical, but I cannot refrain from calling attention to some gross errors which have lately appeared in the papers in regard to the value of arsenic solution as a cure for carnation rust.

In the first place the "druggist's prescription" given by Mr. Hill on page 810 of the *FLORIST*, has, in *Florists' Exchange* and *American Gardening*, been confused with "Fowler's solution." The formula for Fowler's solution (see U. S. Dispensatory, 17th Ed., p. 820) is as follows:

Arsenious acid..... 154 grains.
Bicarbonate of potash..... 309 grains.
Compound spirits of lavender 1 fl. oz. 7m.
Water sufficient to make..... 33 fl. oz. 330m.

This makes a 1% solution of arsenic.

A competent pharmacist of Jamaica, N. Y., assures me that Mr. Hill's "druggist's prescription" is an impossible formula; even as corrected on page 840 of the *FLORIST* it is an impossible formula; 616 grains of arsenious acid cannot be held in solution in 5 ounces of water. It would make a solution about twenty five times as strong as Fowler's solution.

Mr. Hill recommends syringing the plants once a week with Fowler's solution, using one ounce of the Fowler's solution to eight gallons of water. He says on page 810 of the *FLORIST*: "Three applications cleared up some of our worst cases." Appearances have deceived Mr. Hill. The disappearance of the rust must have been due to some other cause. It could not have been due to the treatment with Fowler's solution, because the strength used is entirely too weak to check germination of the spores. I have made germination tests, using Fowler's solution in various proportions, and I find that rust spores immersed in a solution containing one part of Fowler's solution to 1,000 parts water (which is a trifle stronger than the solution recommended by Mr. Hill) germinate as vigorously as do spores in pure water. A 1-500 solution does not check the germination, and a 1-300 solution only slightly; but in a 1-100 solution spore-germination is considerably checked. This last strength may be found successful as a preventive of rust, but I have no faith in it or any other external application as a cure for rust. Spraying may prevent the rust from spreading to healthy plants—nothing more. The vegetative portion of the

PAN OF WHITE HYACINTHS TRIMMED WITH PALE VIOLET CREPE PAPER AND WHITE SASH.

rust fungus is within the plant where it is out of the reach of fungicides. The brown powder found in the pustules on the leaves is composed of the spores. Now to attempt to cure the rust by killing these spores is like trying to kill out Canada thistles or quack grass by destroying the seeds.

The strength of arsenic solution recommended by Mr. Hill will not injure the foliage in the least—much stronger solutions can be used with safety. I sprayed a plant thoroughly with a 1-50 solution and no injury resulted. But Mr. Hill's statement that it "kills the diseased leaf outright" and yet does not injure the healthy foliage, is surely an error.

So far as we at present know, the best treatment for carnation rust is to spray once a week with a solution of copper sulphate (2 pounds copper sulphate to 45 gallons water) as a preventive. The management of the greenhouse is most important. It may be that Fowler's solution used in the ratio of 1 to 100 (about 1½ oz. to 1 gal. water) and applied once a week would be as good as the copper sulphate, but it would be more expensive.

In short, arsenic solution has no special value as a preventive of rust and certainly none as a cure. The dangerous character of rust has been exaggerated, but it is a bad disease and florists should use due care to propagate from healthy stock, spray regularly, and beware of

varieties which are much subject to rust.
Jamaica, N. Y. F. C. STEWART.

ED. AM. FLORIST:—I gave the result produced by the application of Fowler's solution in our houses and on badly infected varieties; the result is the varieties are clean and free from rust, whereas they were badly diseased and practically incapacitated for flower producing. The solution as used under the formula not only destroys the spores on the outside of the leaves but it follows the puncture made by the fungus and kills the rust inside the coating of the leaf. Your correspondent's assertion that no harm can come from the use of arsenic would cause untold harm, as we know from experience. The solution will penetrate the clipped ends of cuttings and will burn and wither the leaves wherever it touches an incision.

Mr. Stewart is wrong in his diagnosis of the black rust, for it enters the leaves and commences at once to propagate spores, the spores thus born find exit and in turn find other carnation growth to puncture and feast upon. If the spores are killed the trouble is ended so far as those particular spores are concerned.

In support of the hypothesis that the fungus punctures the leaf from outside, experiments show that certain varieties when grown under glass during the entire season produce a harder skin to the leaves

PAN OF PROSERPINE TULIPS, WITH WHITE CREPE PAPER AND WHITE SASH.

PAN OF DAFFODILS, SUPPORTS TIED WITH NARROW RIBBON, SASH OF WHITE, YELLOW OR GREEN SATIN.

than when grown in the open air, and where varieties are thus grown the absence of rust is strikingly apparent, and if not entirely absent its presence is reduced to a minimum. I firmly believe we are warranted in using arsenic for the annihilation of rust, and hope we may hear from your readers who are trying or who have tried the solution.

Personally, I stand by what I said at the New York meeting, and reiterate what I then said. To be sure it will take time and application to rid our structures of this evil thing, but I believe its day is past and that we may safely trust to the application of arsenical solution to exterminate the evil. I am not versed in chemistry—much to my sorrow—but I do know that the riddance of rust has been so apparent that it does not admit of question. The solution does the work.

I am hoping that some of our chemists at the experimental (U. S.) stations will give us the benefit of their experience after trying the solution.

I am so busy at the present time that I cannot give a summary from my notes, but hope to do so later. E. G. HILL.

Yellow Carnations.

Please tell me the best way to propagate from a yellow carnation. The plant I have reference to is a common yellow one, but on the same flowering stem there has come a distinct different variety on several occasions—just as different from the yellow as white is from red—and I would like very much to perpetuate it. C. K.

There is no clear yellow carnation in cultivation; all are more or less striped and mottled with pink to a deep crimson, and I believe my guess will not be far from the truth when I say the color of this sport is identical with the color of the stripes in this yellow variety. This is a very common occurrence in striped or var-

iegated varieties. If C. K. would see the freaks cropping out in a house full of seedlings he would not pay so much attention to a sport. But to answer the question: Propagate from this particular plant or as much as possible from the part of the plant that furnishes the sport. Grow them for one season and see the results. Probably there will be some plants more inclined to sport. Take cuttings again from those that show the most tendency to run into the sporting color, and keep on in this selecting, and you may succeed in driving the yellow color out. At the end if you think you may have succeeded you may find yellow sports coming in your new color. I have no faith in carnation sports.

FRED DORNER.

Trimming Easter Plants.

The sale of flowering plants at Easter has increased enormously within a few years, and there is no doubt that this demand will continue to grow, not only for Easter and other special occasions, but for regular every-day trade. The people of this country have only begun to appreciate the usefulness and beauty of plants about the home. It only remains for our plant growers to study to produce plants in such manner and under such conditions as will insure their continuance as long as possible in the changed atmosphere and trying surroundings of the dwelling house. When buyers realize that the plants they purchase can be depended upon to keep their freshness and beauty beyond the few hours or days that limit the existence of too many of the florists' productions of to-day, then will come a revival in the plant trade, of which the present Easter demand is but a mere suggestion.

Great care should be taken that a plant when delivered to the customer is as clean and neat as possible, and every disfigurement in the way of defective leaves and

all traces of untidiness removed from both plant and pot, so that its appearance will be in keeping with all its surroundings in the parlor or drawing room. As with a box of flowers first impressions count for much. Every dainty touch adds to the pleasure of the recipient and will be sure to bear good fruit in the future.

Our illustrations will give some idea of how the progressive retail florists of New York City seek to accomplish this object. Crepe tissue paper and ribbon tastefully used and not overdone can be made to add greatly to the attractiveness of an Easter plant gift. Take for instance the pan of white hyacinths, and who will say that it is not more presentable in its dress of pale violet tissue and white sash than it would be without? Besides, this adds materially to the price for which the arrangement may be sold, and the expert decorator is well repaid for material and time. The pot of twenty-five lily of the valley and the little Otaheite orange, by the addition of a wrapping of white crepe paper tied with a strand of narrow green ribbon, are doubled in value at once. The daisy needs no decoration, but its delicacy is enhanced by a simple covering for the rough pot. This is not so necessary in the case of the moss rose, where a bow of rich dark olive green satin ribbon gives just enough finish. Plants with stems which are apt to be bare and ungainly, such as the laurel, rhododendron, and metrosideros, are sometimes dressed well up on the stem, care being taken to use only colors that match the tints of the flowers. The little trailing strands of baby ribbon as shown in the pot of lilies, the araucaria, and double flowering almond, are daintily effective. The perfect form of the araucaria forbids any obtrusive trimming, and the characteristic Japanese effect of the flowering almond must not be interfered with. Overdoing is the fault to be especially avoided with such subjects. On the other hand the white azalea shows a more elaborate

trimming, which is in keeping with the formal bouquet-like character of the plant. Pale blue was the color combined with white in trimming, but light pink or any other soft color would be equally appropriate. The retailer pays for a plant such as this \$15. When trimmed it sells for \$25 or \$30 at retail. Where confinement is needed to keep the plant in shape, as in the case of the pan of daffodils, the supporting sticks are wound with white tissue or ribbon, and connected with a strand of narrow white ribbon. The widesash in the picture was white, but either yellow or olive green ribbon are equally effective with daffodils.

To the kindness of Mr. Julius Roehrs, of Carlton Hill, N. J., we are indebted for the use of the plants illustrated and assistance in the work. The trimming was done by Mr. A. Warendorff, of 1213 Broadway, New York, a gentleman who as an expert in floral art has but few peers in this country. Some of the plants shown in the photographs were not fully in bloom, but were the best that could be obtained at the time.

Spring Exhibition of the Massachusetts Horticultural Society.

This great event, to which the horticultural fraternity have been looking forward with pleasant anticipations opened at Horticultural Hall, Boston, on Tuesday, March 24, continuing four days. The elements were not propitious at the outset, the thermometer registering freezing weather, and on this account the orchid exhibitors, whose displays have in the past added so much to this occasion, kept their pets at home. Quite a number of plants that had been insufficiently packed showed the effects of their bout with Jack Frost on their trip to the city. Another drawback in a most important department of the exhibition was the prevailing scarcity of carnations in this market. Neither of carnations nor roses was the display nearly as extensive as one year ago, the rose men being also off crop at present. Cinerarias were also less prominent as a feature than on former occasions. Yet with all these lacks the show was pronounced by all to be the finest altogether on record. First and best of all were the cyclamens. There were nearly two hundred plants shown in 7 and 10-inch pots, of which Mrs. B. P. Cheney, John Barr, gardener, showed seventy-five in wonderful perfection. N. T. Kidder, Wm. Martin, gardener, D. Nevins, A. McKay, gardener and H. H. Rogers, Jas. Garthly, gardener were all in it also on cyclamens and the result was a surprise and delight to everybody. Blooms on several plants from Mrs. Cheney measured nearly six inches from tip to tip when expanded.

The Bussey Institution made an enormous display of promiscuous flowering plants and bulbs, filling one table six by forty feet and another wall table of equal length with cinerarias, tulips, hyacinths, azaleas, freesias, anemones, narcissi, lily of the valley, ericas, andromedas, etc., besides two great groups of forced hardy herbaceous plants and shrubs in the lower hall. W. S. Ewell & Son were also in evidence with a collection of flowering bulbs, completely filling the stage and a table forty feet long in addition. In this group was to be found almost everything in the line of commercial bulbs in pans and pots and they made a big show.

Hyacinths were as usual a prominent feature, Dr. C. G. Weld, K. Finlayson, gardener, E. S. Converse, D. F. Roy, gardener, J. L. Gardner, Wm. Thatcher, gar-

LILY OF THE VALLEY. WHITE CREPE PAPER AND NARROW PALE GREEN RIBBON.

dener, and Miss M. S. Walker all contributing. Dr. Weld also staged freesias, ixias, auriculas and jonquils, and was the principal exhibitor of hard-wooded flowering plants such as boronias, acacias and epacris. Ixias from H. S. Rand, tulips from Miss Walker and E. S. Converse and lilies from E. S. Converse and B. P. Cheney were also worthy of notice. Cinerarias were hardly up to past records in size and number, but the quality of the strains was high throughout. They came from J. L. Gardner, Dr. C. E. Weld, E. S. Converse, B. P. Cheney, H. H. Rogers and J. S. Bailey. Outside of the Bussey Institute the only azalea exhibitors were C. E. Weld, Warren Ewell, Jas. Comley and Norton Bros. It is somewhat surprising that with the present abundance in the market of neat well-bloomed azaleas that this department of the exhibition makes no better showing. Primulas from C. E. Weld, D. Nevins and J. L. Gardner were very good, and David Nevins' violets simply incomparable. He has no equal here in this line. James Comley beat his record and surprised the neighbors with a fine group of hybrid roses, pot grown, among them being a well bloomed plant of that most unmanageable variety Her Majesty.

Undoubtedly the greatest attraction in the hall was Jackson Dawson's plant of Crimson Rambler rose. To adequately describe the beauty of this plant with its thousands of brilliant flowers is impossible. Some of the trusses carried as many as forty-five flowers and buds. The plant is but two years old from the graft and was not started into growth until January 1. Mr. P. O'Mara, referring to it said that Mr. Dawson had rendered the nurserymen and dealers of the country a priceless service in thus demonstrating to the public the beauties of this rose.

In the cut flower section three great vases of roses were prominent. They were hybrids from D. Nevins and C. V. Whitten, and Mrs. Pierpont Morgan

from J. N. May, which showed up grandly. Mr. Nevins also filled a table six by ten feet with splendid hybrid roses. James Comley had a very large collection of roses, camellias, etc. On tea roses Wm. Elliott showed up some vases of superb Brides, Bridesmaid and Gontiers, which were grown at his Newtonville houses by John Pritchard, the foreman in charge. C. V. Whitten, George M. Anderson and Oakes Ames, Carl Blomberg, gardener, were also represented in the rose display.

Carnations White Queen, Eldorado, Crystal, Nicholson and others were well shown by Wm. Nicholson, and there were smaller groups from F. A. Blake, W. H. Elliott and G. M. Anderson. As on violet plants D. Nevins was away ahead on violet flowers. H. S. Rand and W. C. Winter also showed violets, Mr. Rand's collection including six varieties.

Visitors to the exhibition were P. O'Mara, New York, J. N. May, Summit, N. J., J. S. Cowles, Newport, R. I. and P. Vos, Sassenheim, Holland.

Prize list will appear in next week's issue.

Sowing Sweet Peas.

Looking through the new catalogues I run across several admonitions to bury sweet pea seed deep! deep!! deep!!! Why? "The roots delight in a cool, moist soil." But what has deep or allow planting of seed to do with a deep or shallow root system of the resulting plant? The farmer has no crop that roots so deeply as red clover, and the seed is sown on the surface and washed in by spring rains.

If sweet pea seed is planted too deeply in early spring it is apt to rot. "Blank's sweet pea seed is no good. I sowed half a pound and didn't get a single plant," was the substance of several complaints made to me last season. They had followed "directions" and planted early and deep. I advised planting the "directions" deep, and the seed early and shallow.

Sowing in a trench and covering lightly

MOSS ROSE WITH BOW OF OLIVE GREEN SATIN RIBBON.

OTAHEITE ORANGE, WHITE CREPE PAPER AND NARROW PALE GREEN RIBBON:

works nicely—sometimes. It makes it easy to smother small weeds when the peas are well up; but, on the other hand, when they are just breaking through it is impossible to cultivate with a horse without covering a good many plants. In sowing most of our sweet peas the past season we made a mark with the corner of a hoe, dropped the seed in this mark and firmed it thoroughly in the soil by tramping. As the soil was very loose the result was a well defined trench. About the time the choice varieties were sprouting we had a tremendous downfall of rain that turned each little trench into a “babbling brooklet.” When the storm was over some of the seed was uncovered; some was washed into adjoining rows to send up rogues all summer; and over Blanche Barpee and other choicest varieties was a deposit of three inches of mud. The most satisfactory plan I have tried was level planting; putting four or five seeds in a place, far enough apart to allow striking through the row with a narrow hoe.

GEO. ARNOLD, JR.

Rochester, N. Y.

I see that our friend Geo. Arnold is on a sweet pea heresy hunt. Good! I wish we might have his comments right along. He illustrates the first law in the code of all horticulture, which is that every man shall get enough intelligence and experience to be a law unto himself. In preaching the gospel it is safe to point to one pattern, but nothing else in this world can be so simplified. We feel like the man who was asked which of two roads to take, who replied, “Whichever one you take you will wish you had taken the other.”

Mr. Arnold says he finds the admonition in the catalogues to “bury sweet pea

seed deep.” Now I don’t know of any catalogues that say “bury,” but they do say *plant*, and *depth* is certainly a necessary point. One of my neighbors once, a German, and a very successful gardener, taught me not to plant culinary peas deep in early spring. After raking his fresh ploughed garden he pressed his rake stake into the soil just about enough to mark the row, and sowed his first early peas in that mark, covering them about half an inch. In about three days they were up, and as they grew the soil was hoed toward them. And I never saw peas do better. Now it is possible our sweet peas have lived and thrived only in spite of deep planting, but I still think the reasons for what we call deep planting are valid.

But I ought to say that the blight has become such a serious problem with me that I shall abandon the trench method this year, and I shall just hollow the ground about two inches before planting, putting the seed about one inch deep in the hollow. And I shall not fill the earth in at all before the tenth of June. But this is simply an experiment to avoid the blight, which I fear is largely caused by the trenching method, and by filling in the soil about the tender vines. Where people are not troubled with the blight, I advise them to follow the old method of planting four or five inches deep, but of covering at first only one inch, and filling in as they grow. And why deep planting? They should be planted from three to six inches deep. I know of no sweet pea expert who plants less than three inches deep. Mr. Eckford’s rule is to “draw a drill about three inches deep, sow the seed thinly, and cover with two inches of soil, leaving the drill hollow, gently tread in if the ground be dry, go

along the row with one foot on each side, treading and making firm for a distance of 18 inches on each side the row.” But much depends on the heaviness of the soil, and whether you have facilities for thorough watering.

Mr. Arnold knows that catalogue rules are made for that unskilled public who follow rules blindly. With his constant oversight of his vines, and facilities for warding off a drouth, he may have excellent results from shallow planting, but catalogue rules are not for him, but for that generality of seed patrons who either slight their planting or neglect their gardens when they most need care. I have tried to test the rules by the reports that I get daily from everywhere; but the latter I receive are about equally divided between glowing accounts of success and dismal wails of failure. One day it is from Canada, then from Alabama, then California, and then Massachusetts, and all say, “Directions followed.” I often feel like saying, with Mr. Arnold, “Bury the *directions* deep.” It is necessary to shout two three things at people to get them to do the work thoroughly. I know that people who will let seven days go by in cut-worm season, without going to look at their row, will let a drouth do its mischief in the same way; but they do stand some chance of picking a few blossoms if they have planted deep. Of course the stock argument for deep planting is that the sweet pea must beat its best in July and August when the midsummer drouth and heat will most sorely try them. But there is also this reason, that deep planting helps to prolong the season of bloom.

Mr. Arnold reasons along the line of nature. If I wanted to follow nature’s plan of letting my vines come into quick

bloom, and of going evenly to seed, in a natural way, I should plant as near like nature as possible. But we bend nature to our purposes. We want to keep our vines growing and blooming clear beyond the season when they would naturally mature. Mr. Arnold will find that deep planting causes root growth to go on while the vines prolong their season of bloom.

The rule of deep planting, or something equivalent to it, is especially applicable to the interior of this country. My observation is that along the sea coast it is a simple matter to have fine sweet peas, also along our northern border and Canada, and especially along the Pacific coast. And where there is a naturally rich alluvial soil in the west and north-west people are enthusiastic over their sweet peas. But in our interior, where the soil is light or worn out, people are apt to starve them by using rank manure and by neglect, and they are not strong enough to stand the extremes of summer, and deep planting is a safeguard against their drying up. In such a case as that the rule would be for the lazy and the ignorant man, and not for Mr. Arnold.

W. T. HUTCHINS.

Treatment of Stanhopea.

In reply to E. C. N.'s inquiry as to his stanhopea not flowering it would be much easier for us to give decisive instruction if we could see or know the state of vigor and health of the plant in question. Presuming that the inquirer has not made a mistake in naming his plant a stanhopea, as we have several species of orchids resembling it in growth and general appearance, I may venture to say that a specimen strong enough to produce from two to four growths a year, if in a healthy condition, ought to be strong enough to also produce from two to four flower scapes annually, provided it gets the proper care and treatment. An old and esteemed friend of mine was in possession of a rather small plant of *S. insignis*, which he considered too weak for flowering, and although grown in an open basket, he had it placed on the bench among other plants, instead of suspending from the roof, where it remained for some time, and when in spring one day he took it up for the purpose of renewing the mossy topdressing he found to his chagrin several decayed and undeveloped flower spikes smothered below the basket. In other instances I have seen spikes decay among the potting material, not being able to find a convenient opening through the mass of crocks and charcoal placed at the bottom of the basket for drainage. The same trouble may occur when the basket is disproportionately deep. As Mr. N. says he has his plant in moss with plenty of broken pots and pieces of charcoal, last year's flower stems may have perished inside of the basket, and if he would examine the latter he may find the remains of flower scapes in among his drainage. However if this should not be the case, a few hints on the general culture and requirements of stanhopeas may assist him in better success another season.

Shallow and very open baskets are necessary for them, either sphagnum or

DAISY IN 8-INCH POT. WHITE CREPE PAPER TIED WITH NARROW RIBBON.

fern roots alone or both mixed are good material to grow them in, but the drainage composed of broken potsherds and lumps of charcoal should not form a compact mass, where the roots only could penetrate into the interstices. The stout and fleshy flower spikes most always grow nearly straight downward, and should find ample openings between the drainage to grow through without being compelled to turn much aside in either direction. The plants want a plentiful supply of water, abundance of heat and moisture in the air, and a rather shady situation while in actual growth, but as soon as growth is completed they require a decided rest by being kept rather dry at the roots, allowing only enough water to keep the pseudo bulbs from shrivelling. Stanhopeas are free growing plants, having furrowed pseudo-bulbs surmounted by one large plaited leaf of dark green, 6 inches wide and 12 to 15 inches long. The scapes or flower stems grow downward from the base of the bulb, and they are all considered very free blooming orchids of very easy culture. Most of them are highly perfumed, but unfortunately their flowers are not lasting, though in large specimens this fault may not be noticed so much because a succession of flower scapes is produced for a month or more, and no collection should be without a few of them. Their flowering period varies from July to October, and their waxy flowers are exceedingly beautiful and curious. A good many varieties are in cultivation, all of them are desirable. An albino in our collection with flowers as large as those of *S. tigrina*, and which I have

never seen anywhere else, is waiting to be named by somebody. J. B. K.

Floriculture in Mexico.

Mr. J. M. Jordon, of St. Louis, recently enjoyed a trip through old Mexico, and in a paper read before the St. Louis Florists' Club said:

"The City of Mexico has quite a number of nice parks, or plazas, as they call them. Having learned that every morning early there is a show of flowers at what they call the 'Flower Market,' which is in one of the parks near the Cathedral of Quadalajara, I went to the market between 5 and 6 o'clock a. m., and there was a great number of people selling flowers in all conceivable ways, in bouquets, wreaths, crosses and designs, and also in loose bunches. Their prices are very low. For 25 cents of Mexican money, which is worth only about half what our United States 25 cent pieces are, we can buy more flowers than we could obtain here in our markets for \$1. Varieties are roses, violets, sweet peas, heliotrope, forget-me-nots, daisies and orange blossoms, with wild ferns.

"In regard to the shade trees around their streets and parks, they are very peculiar. Their *Ficus nitida* and *elastica* grow to large proportions; the eucalyptus grows to immense size; the orange is cultivated quite extensively in the parks.

"Chapultepec is called the 'Hill of the Grasshopper,' site of Montezuma's favorite park; palace built by the Viceroy Galvez, once occupied by Maximilian; it has been renovated as the Mexican White

MOUNTAIN LAUREL. PINK CREPE PAPER AND NARROW WHITE RIBBON.

BOTTLEBRUSH (METROSIDEROS). RED CREPE PAPER AND NARROW RED RIBBON, MATCHING COLOR OF THE BLOOMS.

House. On the hill stands the Military Academy, in the rear of the Presidential Mansion. Leading down from the garden on the roof is a subterranean sally-port, said to open into the cave at the foot of the hill. The park has great cypresses, covered with Spanish moss; one of these giants is 170 feet high and 46 feet around the trunk. Montezuma's bath is in the park, and is now used by the water department of the city. A rock on the hillside is covered with ancient hieroglyphics.

"We passed through mile after mile of plains and coffee plantations. Many orchids could be seen hanging from the trees. I spent one day in Tampico, where Americus Vespucius landed in 1497. This city is very very old in appearance. It is a market for fruit of many varieties."

Boston.

As Easter approaches it becomes more and more apparent that there will be no overstock of flowers for that occasion. If the Easter trade were as a few years ago, a cut flower trade almost exclusively, present indications would indicate a famine, but the sale of Easter plants has increased so rapidly for the past two or three years that a prediction as to the extent of the cut flower demand would be only guess work. Of lilies there will be a considerably less quantity on this market than there were one year ago, so that last Easter's slump on that specialty is

not likely to be repeated. Good carnations are already far short of the daily demand, and have been for some time, so that New York and Philadelphia stock is finding a ready sale here; there is no guess work about this. Of the best roses there are not more than enough, although the street fakirs find no trouble in stocking up on inferior quality stock. From present indications it would seem that violets and bulbous stock will be in full supply.

On Saturday, 21st inst., the garden committee of the Massachusetts Horticultural Society and other invited guests visited the greenhouses of the Bussey Institute to view the exhibit of spring flowering bulbs, forced shrubs, etc. The houses, which are in charge of Chas. J. Dawson, were found to be in splendid condition, and exceedingly creditable to that gentleman, it being undoubtedly true that such a gorgeous and varied display could not be seen elsewhere in this country. Especially noticeable were the pans of *Cypripedium spectabile* and *C. acaule*, on some of which were counted thirty to forty flowers. Besides the lilacs, laurels, azaleas, etc., there were beaths, andromedas and spiraeas in several species, *Daphne Cneorum*, *exochorda*, *Staphylea colchica*, *Lilium umbellatum*, Scotch broom and numerous other shrubs and hardy herbaceous plants seldom seen indoors, and the collection of anemones was particularly fine. After a stroll

through the houses the visitors were escorted to the residence of Mr. Jackson Dawson, where they were entertained for a couple of hours and partook of what Mr. Dawson called an old fashioned New England dinner with fixin's.

Excepting the frosty temperature of the opening day the Massachusetts Horticultural Society was favored with beautiful weather for its spring show, of which a full account is given in another column, and attendance was very large.

A paper illustrated by stereopticon views was read at Horticultural Hall on Saturday, March 21, by F. Lamson Scribner of the Division of Agrostology, Agricultural Department, Washington, D. C., the subject being "Grasses."

Supt. Doogue announces that he proposes to introduce aquatic plants the coming season in the ponds and basins of the Public Garden and other small parks under his control throughout the city.

At the April meeting of the Gardeners' and Florists' Club Prof. B. M. Watson, Jr., of the Bussey Institution, will read a paper on the arrangement and grouping of hardy plants. This insures a good meeting, as Prof. Watson is exceedingly popular, and deservedly so among the fraternity.

The dinner to the committees and exhibitors in the spring show which took place at the Thorndike Hotel on Tuesday noon was one of the most successful on

record. About seventy gentlemen were present. J. H. Woodford, chairman of the committee of arrangements, presided. Joe is the right man in the right place.

New York.

Business has not improved materially since last report, although conditions are changing surely for the better, and the outlook for the immediate future is much brighter and prospects for Easter trade are considered by the wholesale dealers to be very good. Roses are not coming in heavy supply, but prices have shown no indication of advance as yet. The best American Beauties go at 40 cents, but there are very few in the market that are worthy to go in this class, and if there were the price would not hold, as the demand for them is light, Brunners, Rothschilds and Magnas being in a position to dispute the ground with them just now. Jacqsof ordinary quality are plentiful and are not bringing over 8 cents, many being sold for one half this figure. Carnations are not so abundant as they were and sell quicker, although prices are low excepting on the higher grades. Good Scotts are none too plenty, but of Daybreaks of good quality and of excellent whites there is an abundance. In fact all white stock has shown a disposition to drag. Harrisii lilies are moving a little faster at slightly improved figures. Violets are sufficiently plentiful to keep the price down to low limits, although the cool weather aids to keep the quality good for the time of year, and it would seem as though we would have them in good shape for Easter. Lily of the valley, in fact all bulbous stock generally, is still in the dumps, daffodils however are selling somewhat better. There is too much common grade mignonette coming in. Smilax is very scarce. Shipping trade for Easter has already begun to loom up and unless all signs fail it will be of considerable magnitude this time.

The Flatbush Bowling Club has again defeated the Arion Club in a series of three games.

Visiting New York: John McDowell, of Newport. J. N. May and P. O'Mara have gone to the Boston exhibition, Mr. May carrying a nice box of Morgan roses.

Philadelphia.

The growers, particularly those who make a specialty of Easter stock, are rushed these days, and have seemingly more than they can do. Orders came in slowly at first, but now many lines are sold out and the signs "sold, hands off," are seen on many groups of plants with the exception of large sizes. Robert Craig says he is entirely sold out of azaleas, and his other stocks are moving so lively as to indicate a very good season. Jacob Becker says that his old customers are all duplicating and adding to their orders of last year, and he is perfectly satisfied with the way things look. Mr. Harris is especially pleased with the outlook, and thinks it will be the largest Easter he ever had. He has the largest and most varied stock of Easter plants of any establishment in the country. Other growers say their order books are rapidly filling up and all predict a great Easter. The large department stores are handling a good many plants, using them on their counters and cases, and selling what they can, their prices are however, much the same as charged by the regular dealers.

There are indications that the growers have commenced to hold back their cut flowers, particularly carnations. These

LILY. 5 BULBS. 30 FLOWERS. WHITE CREPE PAPER AND SATIN RIBBON. WITH A FEW STRANDS OF BABY RIBBON OF LIGHTER SHADE

flowers are selling quite well now, and it seems a foolish move to refuse a good market at this time for perhaps an inferior one later on.

The medal of the gun club has hardly had time to get warm on one member's breast before another fellow is after it. Mr. Harris won it at the shoot last Wednesday, and will no doubt have to defend it in about two weeks.

Visitors in town: M. Breitmeyer of Detroit, Gude Bros., Washington, R. Patterson, Baltimore, Alfred Outram, London.

St. Louis.

Stock of all kinds was decidedly scarce the past week, not enough to go around, but this week opened up Monday with bright sunshine, and if it continues good stock will not be scarce for Easter. Trade last week was very good; a good many

funerals of late have been a great help to all the florists, using up all the white stuff they could get. The commission men have had some large shipping orders of late. In roses, such as Brides, Meteor, Bridesmaids, Woottons and Perles, prices range from \$4 to \$8; some extra fine blooms brought more. Carnations are not so plentiful as a week ago, and bring from \$2 to \$2.50; some extra fine Scotts and Daybreak bring \$3. Violets are still scarce; home grown sell at 25 cents, double at \$1. Bulb stock is a little better this week; the valley that comes in is very good and sells at \$3 and \$4. Daffs remain at \$2, Romans \$2, Dutch at \$3 and \$4. Harrisii have gone up to \$8, and callas bring from \$8 to \$10. Freesia is selling at from \$1 to \$2. Smilax sells well at \$15 to \$18.

A visit to some of the south side florists found them in first-class shape for Easter

PINK RHODODENDRON, PINK CREPE PAPER AND NARROW WHITE RIBBON.

DOUBLE-FLOWERING ALMOND, BOW OF DARK OLIVE SATIN RIBBON, FESTOONS OF PALE GREEN CREPE RIBBON.

and the spring plant trade. Frank Fillmore will have about 500 Harrisii lilies, 200 spiræas, and will be in full crop with roses and carnations. His house of Uncle John is about as fine as one wants to look at, and same can be said of his rose houses. Frank tells me that he has quit the market and will sell all his spring stock at home this year.

At A. Schray's place his 16 large houses are full of fine grown spring plants for the market; Mr. Schray will have about 500 Harrisii to sell for Easter, also a fine lot of spiræas. His rose and carnation houses are in good shape, and with good bright weather will find him well supplied for Easter. A fine lot of swainsonas were also seen. Mr. Schray anticipates a good spring trade in plants.

The Beyer Bros. are also in fine shape for the Easter trade, have about 500 Harrisii, as fine a lot of spiræas as can be seen anywhere, 1,200 Dutch hyacinths in pots. Spring stock at this place is very fine, and Mr. Beyer expects a large spring trade in plants.

The Jordan Floral Co. will have a large cut of Jacques for Easter.

The Bowling Club Monday night ended its March series of 12 games. J. J. Beneke made 2,396 in 12 games and wins the medal. F. C. Weber was second with 2,245, and D. Helwig third, 2,108. Mr. Helwig made the highest single score during the series, 247; J. J. Beneke second, 242, and Weber third with 234. Next

week the club will roll a match game with the magnolias of South St. Louis, four games each night. The first games will be rolled on the Magnolias' alleys. Their alleys are on the northeast corner 11th and Victor streets, and all florists are invited to come and have a good time.

J. J. B.

Toronto.

The weather still continues very cold but mostly bright; such a long continuance of cold in March is very unusual; there has also been a good deal of snow, sufficient to block nearly every railway in Canada for nearly three days. Such a blockade has not occurred for many years. Trade still continues moderately good in spite of the weather and the quality of flowers coming in could not be better. There is every probability of a very large Easter trade being done both in cut flowers and plants, and that the supply though large will not be in excess, perhaps not even equal to the demand.

The meetings of the Gardeners' and Florists' Association show a considerable improvement this year, the one held last Tuesday being an exceptionally interesting one. Ferns were especially in evidence and two or three tables in the middle of the room were strewn thickly with fronds of many different varieties and also many plants, all of which were well looked over and discussed. Mr. E. H. Carter read a long but very interesting paper describing

the building and planting of a fernery and giving descriptions of the various ferns and the soil and position most suitable for them. Many of the varieties mentioned were unknown or of rare occurrence on this continent, and although Mr. Carter's essay showed his deep and thorough knowledge of the subject I hope he will excuse me when I say that it was a little too far ahead of the present capabilities of this country to be of much use to the members. Such a fernery built and planted as described would indeed be "a thing of beauty and a joy forever" and every member would rejoice to see it, but is it at all probable that any of us will see anything like it for the next twenty-five years? I should be sorry to discourage any member from trying to raise the standard but to consider our status at the present time, our surroundings, facilities and capabilities.

The Steel Briggs Seed Co. sent down a plant in bloom of the *Richardia Elliottiana* (yellow calla). The flower was much praised and admired and was unanimously awarded a first-class certificate of merit. Mr. E. H. Carter brought down a plant of a *really* dwarf form of *Asparagus plumosus* which he has had in his possession for three or four years and which has never shown a sign of wanting to ascend. The plant was in a 6-inch pot, very bushy and about ten inches high. Some of those present said it was just the thing florists had been looking out for

and hitherto had been unable to get. It was also awarded a certificate of merit. The chrysanthemum show prize list was adopted with very little alteration from that of last year. One or two radical changes were proposed by Mr. Ewing, but they did not appear to be acceptable to those present and were accordingly sat on with considerable emphasis. E.

Chicago.

The market keeps quite firm; in spite of bright weather few growers are cutting as much as usual. The quality of stock is generally very good. Bridesmaid and Bride is coming in in extra quality from Bassett & Washburn and Reinberg Bros., and the former firm is cutting plenty of good Morgans. Stielow is sending in particularly fine Brunners, the first hybrids here. Roses, when of first quality, hold stiffly to outside figures, and \$8 is quoted for extra selected stock. Carnations are more plentiful, but white is still rather scarce. Bulb stock moves very slowly, but Harrisii is naturally going up. All greens are scarce, and there is a great shortage of smilax, which is held at \$15 to \$20. Violets hold at 75 cents for the best, though poor stuff goes down to 40 cents.

It is the general opinion that Easter will see a shortage in a good many lines, but especially lilies, although there is no tendency to rush them up to an extravagant price. In a good many cases the lilies intended for Easter came in ahead of time, thus reducing the stock, and there appears no reason to expect a sudden drop at the last, such as has happened some years. In other flowers the cut has been small for some time, whatever the cause; people are cutting fewer flowers than usual. In this market we do not have a huge quantity of flowering plants grown for Easter, which in the eastern cities largely takes the place of cut flowers, so the prospects are that there is no chance of a surplus to be gotten rid of at reduced prices. Shipping orders continue very brisk, so it is evident that growers in other places are also suffering a shortage. That terrible surplus we all dread in the hands of the fakir goes elsewhere, which is certainly better all around locally.

The violet meeting of the Florist Club, held last Thursday evening, was a very interesting session. The exhibits were as follows: James Hartshorne, Chicago, a well grown plant each of California, Marie Louise and Swanley White and vases of fine flowers of the same varieties; J. G. Robinson, Waukesha, Wis., a bunch of excellent Marie Louise; John G. Heintz, Terre Haute, Ind., a large bunch of flowers of the new single violet Princess of Wales; C. E. Weld, Roslindale, Mass., three blooming plants of the new Farquhar violet; C. Ehrhardt, Park Ridge, Ill., three bunches of very fine Marie Louise; Jos. Carbone, San Francisco, flowers of the California, introduced by him. J. C. Vaughan, Chicago, displayed flowers of cannas Italia, Etandard and his unnamed yellow seedling; also flowers of the new Yellow Souper (Mosella) and Pink Souper roses. From H. L. Sunderbruch, Cincinnati, came flowers of the new pink carnation Miss Emma Woher. Mr. John Reardon, Chicago, made a pretty display of orchids in variety including flowers of *Coclogyne cristata alba* and some rare epidendrums. A report of the essays and discussion will appear next week.

Mr. Jas. Jensen of Humboldt Park has a fine display of cyclamens at the present time; these will make an attractive show

in the park greenhouses at Easter. A plant brought to this office showed an excellent strain, grown with much cultural skill.

Recent visitors: Mr. Jac. Wezelenburg, Sassenheim, Holland; Mr. E. H. Giesy, of the Lockland Lumber Co., Lockland, O.; H. Van Zanten of M. Veldhuysen Van Zanten & Sons, Sassenheim, Holland.

McKeesport, Pa.

Messrs. A. J. Deitz & Co. have recently added a seed department to their flower store on 5th avenue.

The usual complaints, frequently heard from retail florists located in towns adjacent to large cities, that "folks will go to the city to buy their cut flowers, designs, etc.," are not made by A. J. Deitz & Co. who not only hold their local trade but do also a good business in the suburban towns. Mr. Deitz reports a good trade all along the line. HOMO.

You will benefit the American Florist by mentioning it every time you write an advertiser in these columns

Pittsburg.

The general dullness of trade is the universal complaint with the florists this week, and with it all prices remain as usual. Stock is so plenty that no one anticipates any scarcity at Easter, although it is generally expected that a very large amount of flowers, much more so than formerly, will be sold then, as the selling figures will be lower than have usually prevailed at this season. The severe weather of the past two weeks seems to have been thoroughly broken this week, although on Tuesday morning the thermometer registered from 2° to 6° above zero, while on Monday at 3 p. m. it stood at 42°, and now that the snow has gone and sleighing ended a better attendance is expected at the meeting of the club on Thursday night than was had at the previous meeting two weeks ago.

Lord & Burnham of New York, who have the contract for the erection of the addition donated to the conservatories at Schenley Park by Mr. Henry Phipps, commenced work on the foundation this week and expect to have them fully completed by July 1.

Segers Bros., and Mr. Speelman, the bulb growers from Holland were with us a few days. Mr. Skidelsky of M. Rice & Co. also was in evidence.

Mr. Wm. Falconer made a flying trip of one day arranging for a house, which he secured on Filmore street next to the one occupied by the late Mr. Bennett. He expects to return and enter on the duties of his new position as Supt. of Schenley Park on April 1.

Mr. John Bader's wife has been very seriously ill, but is reported slightly improved; their numerous friends all hope for a speedy recovery.

HORTICULTURE is the name of a new
publication devoted to outdoor garden-
ing, of which we have received the first
number. It is published monthly by O.
A. Knox at Cuyahoga Falls, Ohio, M.
Crawford being the editor.

THE ANNUAL REPORT of the Buffalo, N.
Y., Park Commissioners was recently re-
ceived at this office. Much planting has
been done during the past year, and, in
addition to the landscape work, the
botanical planting is progressing in a
very satisfactory manner.

In the advertisement of palms and
coleus on page 900 of our spring number
the firm name should have been B. P.
Critchell's Sons instead B. P. Critchell &
Son, and in the same advertisement
following *Latania borbonica* it should
have read "Fine plants" instead of
"Price plants."

Cincinnati.

Our storemen complain of dull trade
the past week; both wholesale houses
are doing a fair shipping trade.
Prices are low and only the choice sells at
these figures. Carnations 1 to 2, roses,
small, 3 to 5, choice Mermet, Brides,
Bridesmaid and Meteor 5 to 8; valley 3,
narcissus 3, Romans 2, tulips 2 to 3, callas
6 to 8, Harrisii 6 to 10; violets 50 cents
per 100.

Market last Saturday, being a nice
bright day, brought out most all of the
florists. Cut flowers moved moderately
at fair prices; there was a brisk demand
for ferns and small palms. A lot of choice
hybrid roses on G. Adrian's stand sold
well. We are all looking forward to
Easter and from the general appearance
of stock the supply will be equal to the
demand. H. SCHWARZ.

Folding Flower Boxes are the best
and most convenient ever put upon
the market. They are made from
board, manufactured especially for
these goods, and made so as to resist
moisture, thereby keeping the flow-
ers fresh, and the box holding its
shape.

Re Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

S. E. BRIGGS, Pres.; T. W. WOOD, 1st. Vice-Pres.; ALEX. ROEDERS, 2nd. Vice-Pres.; A. L. DON, 114 Chambers St., New York, Sec'y and Treas. The fourteenth annual meeting will be held at Niagara Falls, N. Y., June 9 to 11, 1896.

VISITED CHICAGO: C. E. Angell, Oshkosh, Wis.

MR. LEM BOWEN sailed for Europe on the 26th inst.

SEEDSMEN with grips full of letters and "pulls" and trunks packed with "surplus lists" have been seen in Washington and headed for Washington for ten days past, while bag men everywhere are piling up orders and making out "options." The verdict is anxiously awaited, and the hustling that will be done after the orders are placed will be a pretty sight.

Catalogues Received.

J. F. Dickmann, St. Louis, Mo., seeds; C. S. FitzSimmons, Lansing, Mich., retail list plants and seeds; J. Blaauw & Co. Boskoop, Holland, bulbs; E. H. Krelage & Son, Haarlem, Holland, bulbs and roots; Jac. Wezelenburg, Sassenheim, Holland, Dutch bulbs and flower roots; Wisconsin Flower Exchange, Milwaukee, Wis., new cannas; Klehm's Nurseries, Arlington Heights, Ill., plants, flowers, and nursery stock; C. J. Speelman & Sons, Sassenheim, Holland, Dutch bulbs; F. R. Pierson Co., Tarrytown, N. Y., seeds, plants and bulbs.

Washington, D. C.

A brief call on Mr. Pfister at the White House greenhouses showed his famous cinerarias in excellent shape with a good display of bulbous flowers, lilies, hyacinths, etc. Mr. Pfister felt called upon to apologize for the appearance of some plants so frequently hard used in decorations, but the writer could see no need for excuses, as the entire stock seemed in excellent shape. Due preparation has been made for the usual extensive bedding which Mr. P. annually provides for the grounds. B.

Neponset Flower Pots

of Waterproof Paper, are sold as follows:

Giant Comet "Snow."

Pkt. 25c, 1/2 oz. 75c, oz. \$6.00.

VAUGHAN'S FLORISTS' ASTERS.

White Branching Aster.

This branches freely and grows pure white flowers 1 inches in diameter on very long stems. The petals are long, and many of them somewhat twisted, giving them the appearance of graceful chrysanthemums.

Pkt. 25c, 1/2 oz. 40c, 1 oz. 70c, oz. \$2.50.

Vaughan's Florist Mixture.

All of the best cut flower Asters, white, pink, brightest red, with a few blue and odd shades. This mixture is the strain for florists, containing only quick selling desirable shades. This is a good substitute for the higher priced separate colors.

Trade packet 25c, 1/2 oz. 60c, oz. \$3.75.

Asters, White, Mixed.

Contains all of the white flowering varieties suitable for cut blooms, and includes the Giant Comet "Snow" and the White Branching.

Pkt. 50c, 1/2 oz. 60c, 1 oz. \$1.00, oz. \$3.50.

FLORIST FLOWER SEEDS.

Strictly fresh new crop stock with all the latest novelties and all the standard varieties are shown in our Book for Florists, spring edition, mailed free on request. We have never yet printed an issue of this book that did not contain novelties which should be tried by every florist.

Have you used the Guillaud Carnations?

LA FAYETTE, IND.

EMMA WOCHER, The New Shell-Pink Carnation

This Carnation is of a "lively bright shade," deeper than Daybreak, blooms measure from 2 to 2½ inches in diameter, fragrant, with a stem that carries the bloom erect at all times, calyx perfect, flower of good form; will grow erect with no other support than a V shape wire netting and is pronounced by all who have seen it to be an acquisition and many orders have already been booked. In our Cincinnati market it sells more readily than either Scott or Daybreak; it is not a cropper but a continuous bloomer.

Price for strong well-rooted cuttings, \$10 per 100; \$75 per 1000; 500 at 1000 rates. Cash must accompany all orders or satisfactory reference. Address

R. WITTERSTAETTER,
Sedamsville, Ohio.

EQUAL TO

POT GROWN.

VAUGHAN'S SEED STORE, 84 & 86 RANDOLPH STREET, CHICAGO.

NEW CARNATION, W. D. SLOANE.

This new sort will prove a leader to all Florists. We know of no better variety of its color, and none can equal it in fragrance. The plant is a strong and vigorous grower, needing but little support, with dark foliage about as heavy as Tidal Wave. Flowers are large, good substance and lasting qualities, borne on stiff stems 15 to 20 inches in length; color a beautiful cerise. Very profuse bloomer.

PRICE, \$10.00 PER 100; \$75.00 PER 1000.

Pitcher & Manda, Short Hills, N. J.

HENRY A. NIEMEYER, Erie, Pa.

Baltimore.

The last meeting of the club was a very important one, as the committees for the year were to be appointed, and upon the judgment displayed by the president in selecting the show committee depends very largely the success or failure of the annual show; and upon his selection of an executive committee depends in a great measure the welfare of the club. The show committee as selected contains material for a skillful, experienced, energetic and perfectly harmonious effort at holding a grand exhibition, and if the show this year is not a complete success it will be owing to something that cannot now be foreseen. The gentlemen composing the committee are Messrs. Wm. A. Ekas, P. B. Welch, W. P. Binder, I. H. Moss and N. F. Plitton. The president wished to reappoint the old executive committee, but having put one member of it on the show committee found it necessary to make some change, he therefore deferred making the appointment till next meeting.

Mr. John Donn announced his intended retirement from business on June 1, having completed arrangements to dispose of his place to Montgomery Bros.

The near approach of Easter has had little effect on prices or sales yet. Good Perles are plentiful at 4 cents, Mermets 5 cents, extra choice white and pink buds 6 cents. Violets are about done, 20 to 25 cents being the most they bring. Some very good chrysanthemums were in Mr. C. E. Smith's window on the 24th. Tulips and hyacinths are plentiful, but *Lilium Harrisii* seems rather scarce.

The weather has been the most surprising succession of high and low temperatures that ever kept a poor florist guessing. Within the past ten days we have had the two heaviest snow storms of the winter, and between them days when the thermometer went up to 60°.

Always mention the American Florist when writing to advertisers.

Rochester, N. Y.

Most of our retailers were rather busy in the past week; the bulk of the demand was funeral work. Some of the pieces were elaborate and costly, among them a large blanket made of violets and fringed with lily of the valley was gotten up in a very tasteful and artistic manner, light and natural looking. Other designs were numerous, and some of them equally elaborate and of large size, but only of the ordinary forms.

Flowers were not overplenty, and had the weather been more favorable perhaps there would have been a decided scarcity, but three days of snow storms and blizzards kept buyers at home, and the short supply was not noticed so much. Prices are about the same as last week, although an advance may be looked for at any time now.

The local growers of Easter plants are moving their stock from one house to another so as to have them just right for Easter; some have to be placed in a warmer place, others into cooler quarters to keep them back. Azaleas are in good shape everywhere, cinerarias, bulbous stuff, spiraeas, marguerites, genistas, etc., are plentiful, but by all appearance there will be a great scarcity of longiflorum, both pot plants and cut blooms; in several places the failure to get them out in time is laid to the unfavorable and steadily cold weather.

Vick & Hill are going to open a retail florist store on East Main street, and will be ready for business in a few days. Mr. Ed. Vick will have charge of the store, and his genial manners, together with the fact of being well known in the city through his long connection with the old seed firm of Jas. Vick, will undoubtedly assist him greatly in building up a large trade.

Mr. A. Rolker, of New York, was a visitor in town, also Mr. Killen, representing C. Joosten, of the same place. The first mentioned gentleman got somewhat disgusted with our fine wintry weather and left us by the next train, bound for New York, promising to return sometime when there was less snow on the ground. J. B. K.

SACALINE! SACALINE! SACALINE!

No other forage plant has ever created such wide-spread discussion as Sacaline. Much that has been said of it, especially by the enemies of the plant, has been pure speculation. Facts are, however, becoming established and while it has not been proved that it will yield 180 tons of forage per acre annually, as claimed, yet the statement that it will become a noxious weed has been proved false; as it cannot be induced to produce seed with us. That cattle and horses will eat it, both in the green and dry state, without coaxing, has been conclusively proved also. Its ability to grow and flourish during prolonged drought, when all other forage plants fail utterly, has likewise been proved the past summer—rendering it of value that cannot be estimated, in the West and Southwest at least, where the cattle interests are so great. But discussion and difference of opinion will, we fear, continue for a long time—in fact we are very much afraid Sacaline will have many enemies, and from no defect in the plant itself, the true Sacaline; but by reason of so many seeds and plants of worthless kinds of Polygonum having been sent out for it. We have no way of knowing accurately but from the best sources of information at our command, we are forced to the conclusion that there have been more than double the amount of spurious plants and seeds distributed throughout the United States for Sacaline than there have been of the genuine species, *Polygonum Sachalinense*.

Home Grown Roots, Strictly True and Pure.
The accompanying illustration is a fair representation of the plants of Sacaline we offer. They are well developed roots with perfectly formed crowns and numerous large, plump, fully matured eyes. They are simply perfect. Best of all we know positively that every one is the genuine Sacaline. We have tested the seed we offer and know it to be the true Sacaline and fertile. This is why we cannot offer it at such low prices as some others. It has been re-cleaned and is free of husk or chaff—all pure seed.
Roots, 100, \$5.00, 1000, \$45.00. Seed, oz., \$100; 1/4 lb., \$3.00; pound, \$8.00.

Cleveland.

Bad weather, lasting through two or three days of the past week, caused flowers to accumulate in large quantities for the time being. Latterly, however, business took a slight brace, which helped somewhat to reduce the surplus to carry over into this week.

We got about the same dose of weather that was served out all over the country at the same time, a regular March blizzard, with all the accompaniments of snow, sleet, wind and cold that tend to make such things pre-eminently unpleasant.

Aside from that, there is little to be said about anything. The Williams & Wilson Co. is building three houses measuring 90x125.

At the regular meeting of the club last Tuesday, the matter of a floral exhibition at the time of the convention came up for discussion. The director of the centennial commission, Mr. Wilson M. Day, addressed the meeting relative to the matter and urged the club to take the matter up. There is of course, considerable diversity of opinion among club members as to the expediency of assuming the additional amount of work and expense that anything more than the usual trade exhibit would involve, but after some discussion, the matter was referred to a special committee of six (Mr. Day being one member) who are to meet the commissioners and report any proposition they may have to offer to the club. The report will be presented at the next regular meeting, April 14.

At that meeting the matter of a chrysanthemum and general flower show next fall will come up for final settlement. There does not seem to be much doubt that the verdict will be in favor of such an exhibition in view of the very good success of the one held last fall. That exhibit was planned and executed within four weeks and and no regrettable features were developed. With so much more time, a great deal more could be done. Be that as it may, however, an extra large attendance is desired and expected, as there is the time to talk for or against, and not after the matter is settled. Other business was practically routine, including the election of two or three new members. A.

News Notes.

NORTH EPPING, N. H.—The greenhouse of Daniel Dow was destroyed by fire on the night of March 16.

THE BERKSHIRE COUNTY Gardeners' and Florists' Club have fixed upon Nov. 10, 11 and 12 as the dates for their fall exhibition.

CANON CITY, COLO.—Connor & Flohr have given up the lease of R. D. Baker's greenhouses and Mr. Baker will continue the business.

HARTFORD, CONN.—Geo. A. Parker, formerly gardener in charge of the Old Colony R. R. stations has been appointed superintendent of Keney Park in this city.

PEORIA, ILL.—At the meeting of the park board March 19 \$300 was appropriated for the purchase of greenhouse plants and \$200 for the purchase of trees and shrubs.

BINGHAMTON, N. Y.—A resolution has been passed by the council directing that the committee on parks investigate and report as to best means of enlarging the park system.

PITTSFIELD, MASS.—V. H. O'mstead & Co. have sold out to John White the store on South street which they have conducted since last July. Mr. O'mstead will go to Oil City, Pa.

NEW ORLEANS.—The City Park commissioners are taking steps to add new territory to the City Park. Mr. Paul Capdeville has been elected president of the board of commissioners.

FALL RIVER, MASS.—Thos. W. Lawton died on March 12 of heart failure, aged 74 years. He had been in the florist business here for some years and was extremely popular among all classes.

ST. CHARLES, MO.—Mr. Jos. Gelven has purchased the greenhouses of Mr. A. Paule and will the coming summer add a range of houses for cut flower growing. He will grow for the St. Louis market as well as local trade.

POUGHKEEPSIE, N. Y.—The Dutchess County Hort. Society will hold its annual autumn exhibition November 11 to 13 next. The premium list is being printed and copies may be had on application to W. G. Gomersall, Sec'y, Fishkill-on-Hudson, N. Y.

NEW BEDFORD, MASS.—On the morning of March 19 the greenhouses of E. S. Haskell took fire. Prompt action saved the establishment from destruction, but quite a number of plants, comprising most of the contents of one house, were destroyed by smoke.

KANSAS CITY, MO.—The park board has adopted a resolution recommending to the city council that it take action looking toward the creation of the proposed Penn Valley park, which will contain about 125 acres. It will extend from the city limits on the south, Wyandotte street on the east, Twenty-sixth street on the north and Summit street on the west.

PROVIDENCE, R. I.—At a meeting of the Rhode Island Horticultural Society on the evening of March 18, Mr. Chas. Storer delivered an entertaining lecture on "A Ramble Among Greenhouses and Choice Plants." A large number of beautiful stereopticon pictures were shown giving the exterior and interior views from the estates of H. H. Hunnewell, F. L. Ames and other noted places.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipfle Dopfel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Dopfel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.

Send for price list and samples and we know you will give us an order.

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafters, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

Heating.

Replying to the inquiry from David Cliffe—his new boiler being new and clean, makes steam much faster than the old one; his remedy lies in reducing the draft or grate surface to an extent sufficient to overcome the difference. Different causes will produce the conditions complained of, but in Mr. Cliffe's case the above suggestions if carried out will remedy the trouble.

Bay City, Mich.

JOHN IRVINE.

Carnation Notes.

Quite a number of inquiries about the construction of carnation houses leads me to give my views on the same, and a few hints may not come amiss. I will not dwell on the construction proper, for one has to build cheap, another has the means to build more substantially. Just as good carnations can be grown in a house that will only cost \$500 as in one that will cost \$1,000, providing the principles peculiar to carnation culture are observed, and to these I will confine myself. The cost is only a matter of means and durability.

The two most important points are light and air. Through the short days of the winter months sunshine is the most important factor for growing good blooms. Every hour's sunshine on cloudy days is of the greatest importance, and to derive the full benefit the house must have the lay from east to west, so as to present one full side to the rays of the sun. If the short-span-to-the-south style is adopted the effect of the sun's rays is much increased during the short winter days, when the sun is at the lowest.

When I mention air, I do not only mean thorough system of ventilating, I include also space. I consider it necessary that a carnation house should be roomy and airy, and one should not be misled by the idea that while carnations are rather low growing plants a low house is sufficient for its culture; this is a grave mistake. It is not essential to have the plants near the glass; if the house is light and airy the benches are much better near the ground, elevated at a height so they can be worked with comfort, and high enough so they are exposed to the full rays of the sun. Houses 20 feet wide, and from 10 to 12 feet high under the ridge, are much better than the lower and narrower ones. I prefer to have room, air, it comes so much nearer to the outdoor cultivation, gives better circulation of air, facilitates ventilation, for the ventilators can be opened on cold bright days, when often the temperature inside becomes uncomfortably warm for the plants, without any danger of chilling them. The cold air coming in at the ridge has to mix first with a large quantity of warm air before reaching the plants below; while in low houses the cold air comes in in a stream direct on the plants without having a chance to become modified, or when it comes in gusts will leave the plants one moment

cold, the other warm, and this will always have bad effects.

To make ventilating perfect it should open at the ridge and be continuous. When opened at the ridge it will keep the house in a much more even temperature in every part than when binged to the ridge and opened below. The exchange of the hot and cold air is more even, nor will it blow in in gusts, as the stream of air will blow over and is not caught under the ventilating sash. Side ventilation is preferable through spring, summer and fall, but with a thorough top ventilation can be dispensed with.

Regarding the interior arrangement, I would invariably advise keeping the benches away from the walls. It is better for the plants and saves the walls. A free circulation of air all around, and plenty of it, is what is needed, and the plants nearest the wall will always make a poor growth anyway, or be too near the glass.

About the style of houses. I am partial to short-span-to-the-south for reasons stated some time ago in some of my notes; it also economizes in cost of construction and in space, as they can be built in a range together without one shading the other. Even span, and more so three-quarter span houses, have to be built separate, far enough apart to prevent one from shading the other. It is far from me to assert that just as good flowers cannot be grown in an even or three-quarter span, especially can this be done when there are many bright days; but in much cloudy weather through the short winter days I give the preference to the short-span-to-the-south.

FRED DORNER.

Bacteriosis of Carnations.

Bulletin No. 59 of the Agricultural Experiment Station, Purdue University, just published, is devoted to this disease, being the result of long and careful investigation on the part of Professors J. C. Arther and H. L. Bolley. It is a most valuable document; dealing with an obscure disease that is, in the opinion of experienced carnation growers, more to be dreaded than the better-known rust, while the present publication is the first relation of its life and environment from the scientific standpoint.

According to the description here given, bacteriosis is a disease of the carnation leaf, rarely attacking the stem or other parts of the plant; generally starting in the leaf when immature. The affected leaf, even when its surface presents no unusual appearance to the eye, if held towards a strong light, shows small pellucid dots scattered irregularly through it, sometimes having a faint yellowish color. The appearance of these dots resembles the oil glands in the leaves of the St. John's wort (*hypericum*). Sometimes the surface of the leaf is slightly

raised over the dots, making watery pimples. After a time the surface of the leaf changes, finally showing a distinct spot; as it extends inside the leaf the surface tissues dry, the internal tissues collapse, and whitish sunken spots appear. In some varieties the spots change to a reddish or purplish tinge, but the authors of the bulletin do not regard this as being in any way connected with the disease known as "purple joint." As the spots increase in size the leaves wither, but continue to cling to the stem. The spots never show a dark center, and rarely make any concentric circles, such as those caused by spot disease or fairy ring.

After the isolation and artificial culture of this bacterium experiments were made in the artificial inoculation of healthy plants. It was found that while all members of the *Dianthus* family could be inoculated with it, it appeared powerless to affect other classes of plants. It found its readiest prey among young, immature or weakly plants, and its progress was often followed by fungous disease. A summary of the bulletin is as follows:

1. Bacteriosis of carnations is a widespread disease of the carnation plant only recently recognized.

2. It is seated in the leaves but affects the whole growth of the plant, and checks the production of flowers.

3. The disease is caused by parasitic bacteria entering the plant from the air through the stomata, or occasionally by the punctures of aphides.

4. The germ associated with the disease may be separated and shown by artificial infection of healthy plants to be the cause of the disease.

5. The germ will grow well at any temperature not inimical to the life of the carnation plant.

6. The disease does not usually affect other pinks beside the carnation, but may be artificially transferred to several species.

7. Plants outside the pink family will not contract the disease, naturally or artificially.

8. Any varieties of carnation may be affected, but old and weak or poorly grown varieties are most susceptible.

9. Plants may be kept essentially free from the disease by keeping the foliage dry and preventing the presence of aphides.

10. Watering a carnation house is to be done by directing the stream of water between the rows beneath wire netting arranged to support the foliage.

11. Overhead spraying is only to be done occasionally on bright days, and with water containing a small amount of ammoniacal copper carbonate.

It will be observed that Dr. Arthur's investigations, extending over a period of six or seven years, uphold the opinions of our best growers, who look on careful cultivation as the best preventive of any disease. The bulletin may be obtained by addressing the Agricultural Experiment Station, Purdue University La Fayette, Ind.

Fighting the Rust.

I wish to know how often the copper solution should be applied upon carnations, which are badly covered with rust.

I have tried one pound of dry arsenic to a barrel of water and it seems to go for the rust but burns badly in spots and I am afraid it would kill the plants as well as the rust. The above solution was given a few weeks ago in the *FLORIST* but seems to me a great deal too strong. Perhaps I got it too strong, as I first dissolved the arsenic with soda in boiling water. R. D. B.

In a case where one would use the copper solution for the first time, I would say to use it once a week for two or three weeks in succession, and after that once in two or three weeks. I am afraid where too much spraying is done with the different remedies, the ground may become so saturated with the poisons, that the plants eventually will be killed from the roots. I will say here again that the

copper solution carbonate of copper, potassium and others are no absolute remedy, undoubtedly the spores that come in contact with the spray will be killed, and nothing more. It is therefore a great help to check the disease, and wherever used will do much good. It will have the same beneficial influence on bacteria and other fungoid diseases as on rust.

On the arsenic remedy I can not say anything, as I am so fortunate as not to have any chance to try it. But from appearance I believe that when a plant is very badly covered with rust, and the arsenic takes effect on every rust pustule as stated by those who made the experiments, not much will be left of the plant.

FRED DORNER.

Carnations in the Exhibiton Hall.

In the opinions published I think but one man has hit the "key note." It is the crowd. To illustrate: I have found that carnations exposed for sale in a large cool tent at our agricultural fair would go to sleep in a few hours. It is impossible to keep any kind of cut flowers awake for more than six hours when the tents are full of people. This has occurred again and again in all weathers and in October, the best show month for flowers in this section.

Our remedy is fresh flowers every day and I think that unless the exhibition blooms are shown in a glass case, where air can be given and no exposure to the poisonous gases generated, fresh flowers each day is the only remedy.

Danbury, Conn. F. L. BUTLER.

"Sleepy" Carnations.

Regarding "sleepiness" of carnations, caused by fertilization before or during exhibition, it seems to me that it might be worth the while of exhibitors to remove the styles from such flowers as they propose to exhibit before they reach maturity; experimentally of course. It will cost something, but far greater pains and expense have been lavished on exhibition specimens of the "divine" flower, as some of your readers know.

Trenton, N. J. JAMES MACPHERSON.

Massachusetts Horticultural Society Awards at Spring Exhibition.

A full description of this show was published in our issue of last week. The list of awards was as follows, the party first named being in each case, except where otherwise noted, the exhibitor receiving first prize.

Cut flowers: Hybrid perpetual roses, David Nevins, American Beauty, C. V. Whitten, second. Bridesmaid, W. H. Elliott, C. V. Whitten. Meteor, C. V. Whitten, second. Bride, W. H. Elliott, C. V. Whitten. Mermet, the same. Gontier, W. H. Elliott. Vase assorted blooms, David Nevins, C. V. Whitten. Pansies, J. S. Fay. Violets; Czar, H. S. Rand, Lady Hume Campbell, D. Nevins, W. C. Winter. M. Louise, D. Nevins, H. S. Rand. Swanley White, D. Nevins. Camellias, J. H. White, Jas. Comley.

Plants; Indian azaleas, Bussey Institution, two firsts, three seconds. Dr. C. G. Weld, two firsts. Norton Bros., one first, James Comley, one second. Ericas, Bussey Institution Hardy orchids, forced hardy herbaceous plants and shrubs, hardy flowering deciduous shrubs, hardy flowering evergreen shrubs, all to Bussey Institution. Greenhouse plant in bloom, Dr. C. G. Weld, E. S. Converse. Hard wooded greenhouse plants in bloom, Dr.

C. G. Weld. Hybrid perpetual roses, Jas. Comley, first and second. Hardy primroses and polyantheses, J. L. Gardner, Dr. C. G. Weld, David Nevins. Auriculas, Dr. C. G. Weld. Cyclamens, 10 plants, Mrs. B. P. Cheney, N. T. Kidder, Mrs. B. P. Cheney. Ten plants in not over 7-inch pots, Mrs. B. P. Cheney, the same second, N. D. Kidder third. Single plant, N. T. Kidder, David Nevins. Cinerarias, six varieties, John L. Gardner, Mrs. B. P. Cheney, J. S. Bailey, Bussey Institution. Three varieties, Mrs. B. P. Cheney, John L. Gardner, E. S. Converse. Single plant, John L. Gardner, Mrs. B. P. Cheney, E. S. Converse.

Spring flowering bulbs—Hyacinths, 12 varieties, one in each pot, John L. Gardner, Bussey Institution, Dr. C. G. Weld; six varieties, Dr. C. G. Weld, E. S. Converse, Bussey Institution; three varieties, Dr. C. G. Weld, E. S. Converse, Bussey Institution; single bulb, Miss M. S. Walker, Dr. C. G. Weld; three pans, 10 bulbs of one variety in each pan, Miss M. S. Walker, Dr. C. G. Weld, John L. Gardner; two pans, E. S. Converse, Bussey Institution, Miss M. S. Walker; single pan, Bussey Institution, Miss M. S. Walker, E. S. Converse. Tulips, six, nine bulbs of one variety in each, W. S. Ewell & Son; three pans, W. S. Ewell & Son; three pans, 12 bulbs of one variety in each pan, Miss M. S. Walker. Polyanthus narcissus, four pots, three bulbs in each, Dr. C. G. Weld. Jonquils, six pots, Bussey Institution, Dr. C. G. Weld, W. S. Ewell & Son. Narcissi, six pans, W. S. Ewell & Son, Bussey Institution; three pans, W. S. Ewell & Son, Bussey Institution. Liliun Harrisii, six pots, E. S. Converse, Mrs. B. P. Cheney. Lily of the valley, six pots, Bussey Institution, W. S. Ewell & Son, the same third. Anemones, three pots, Bussey Institution. Freesias, six pots, Bussey Institution, Dr. C. G. Weld, John L. Gardner. Ixias and tritonias, six pots, Dr. C. G. Weld, the same second. Roman hyacinths, six pans, 10 bulbs in a pan, W. S. Ewell & Son. General display of spring bulbs, all classes, Bussey Institution, W. S. Ewell & Son.

The society's silver medal was awarded to Jackson Dawson for Crimson Rambler rose, and to Dr. C. G. Weld for *Acacia Drummondii*. J. F. Huss received honorable mention for *Adiantum Ethiopicum*, and also a certificate of merit for *Streptocarpus Wendlandii*.

Views at the Spring Exhibition of the Mass. Horticultural Society.

One of the illustrations herewith presented gives a general view of the upper Horticultural Hall where the spring flowering bulbs and greenhouse plants were staged. The other shows the group of 75 cyclamens exhibited by Mrs. B. P. Cheney, John Barr, gardener.

The Violet.

Following we give the papers read at the recent "violet meeting" of the Chicago Florist Club and a condensed report of the discussion that followed.

VARIETIES AND STYLE OF HOUSE.

I think it is a duty that belongs to us all who are growing flowers for market to study this question, and after we have studied it to give our experience as best we can for each other's benefit. The violet certainly cuts a great figure in the trade, during the winter months especially, and I feel with a few other members of the club that it has been greatly neglected here, considering the position it

GENERAL VIEW IN UPPER HALL:
SPRING SHOW MASSACHUSETTS HORTICULTURAL SOCIETY.

holds with other cut flowers and the difficulty met with in its culture. If a man is growing roses and carnations, has first class stock, soil, etc., and knows his business, he is most always sure of success, but he may have everything he desires when he plants his violets and he is always a little shaky about them. Why is this? The chief reason is, I believe, because we do not get our heads together as often as we should and tell our troubles. What one man does not know another does, and vice versa.

In regard to varieties, it is my opinion that we only need two, a double and a single, and we cannot afford to be without either. You all know the qualities desired are a large flower, deep color, lots of fragrance and fairly good stems. We have tried several varieties at our place this winter. These are Robert Garrett, a double, no use whatever on account of its color, it being a pale blue. Swanley White is first-class in every respect except selling qualities, but a white violet won't sell, at any rate that is our experience. Lady Campbell is a very fine double violet and fragrant, and is excellent as a pot plant (it sells on sight), but the stems are too short with me for cutting purposes. The only two that I have any use for are Marie Louise, double, and California, single. There may be better but I don't know any, and I think that where the

Marie Louise does not succeed the California will; the latter is the surest money maker and does not appear to be so touchy and self-willed as the double one.

While Marie Louise is doing first rate with us now, it has not paid us so well as the California. Here are the figures for the California. We put in 300 plants on a bench of 195 square feet, planted the 1st of September, commenced picking the latter part of the same month, and until about the 1st of December we had picked 4925 flowers, which brought \$61.50. We sold about 700 of them retail. Then by a mishap to our heating pipes the house was frozen and it took off all the leaves, as the temperature went down to 18° several nights. It kept along that way, freezing to thawing, until the last of January when we got the pipes working right again. We had only picked about 500 blooms during that time, for \$5.00, and from that time until now we have picked 11,600 and sold them easily for \$93.45, having picked over 3,000 flowers in one week; total flowers picked 17,025, cash \$159.95, or at the rate of 82 cents per square foot and they look at present as though they will easily reach the \$1.00 mark.

As for kind of a house I think William Scott's ideal violet house is as good as any. We built one after his plan last year and it proved very satisfactory. This

house runs north and south, is 11 feet wide inside, a bench on each side with a walk in the middle, butted glass, to be taken out in summer. I prefer benches to solid beds, as I think we can get flowers earlier that way, and as usual the early bird catches the worm.

JAS. HARTSHORNE.

A FEW WORDS ON GROWING VIOLETS.

Violets have been grown at our place for the last ten years or over without any total failure. Our mode of culture is as follows: We most generally take our cuttings or runners (whatever you may call them) and put them in shallow boxes to root, which takes about three weeks. These runners we make about the first of October and after being well rooted we put the flats in a place where they get plenty of air, and we generally keep them where the night temperature does not exceed 40° during the winter, and after February 1 we take them out of flats, pot them in 1¾-inch pots, keeping them in the same temperature with plenty of air, and by April 15 they will have plenty of roots and are ready to be planted out doors.

Preparing land to grow them in. We generally grow our violets without any manure whatever in the ground, but we take grass land and plow it over one year and grow corn, etc., on the same the first

year, and the next year it is plowed and wellsubsoiled about 15 inches to 18 inches deep in the fall. The next spring it is only cultivated with a common seven shovel cultivator to loosen the ground, then they are planted out about 12 inches in the rows and the rows 18 inches wide. After they are planted we cultivate them with a harrow cultivator once a week and keep all the runners well picked off excepting those that we want to propagate from, which we let grow in order to get the cuttings for the following year. The cultivating is done once a week, whether weeds grow or not, in order to get what the nurserymen call the "dust mulch," and after every rain they are cultivated in order to keep the moisture there. We generally transplant in greenhouse about October 1.

Soil for benches. We generally put four to five inches of black soil on the benches and one inch of leaf mould on the top of that, so that we don't have many weeds on the benches. We never transplant them except in cloudy weather, otherwise the roots are always hurt. We give them about 45° night temperature and about 60° during the day. We never have had any disease to amount to anything after first year of culture. GEO. KLEHM.

DISCUSSION.

Mr. Hartshorne was asked if he realized as much per square foot on his Marie Louise violets as on the California.

MR. HARTSHORNE.—They do not pay so much per square foot. They were way behind the California.

MR. KLEHM.—We get about 90 cents per square foot of bench during the season from our Marie Louise.

MR. ROBINSON.—My experience has been that the double are far ahead of the single. I have had California. It has been hard to get rid of the single.

MR. WIENHOEBER.—My customers tell me they like the single ones better than the double, but they say they keep poorly. No, the single violets do not keep so well on an average as the double. The same thing is true, I am told in New York. Thorley told me he could not sell nearly as many singles as he could doubles. I believe that if a good single violet that will keep well comes in now it will sell better than the other. The California has a better stem and nicer foliage. If I were growing violets for market, would grow more California than double. Czar is liked very much by the people. It is a late spring variety.

Answering the question, "What kind of soil does the violet grow best in?" Mr. Klehm said, "We used to grow almost altogether in leaf mould, but of late years we have used black soil and put leaf mould on top in order to keep the weeds out." (Question is asked if Mr. K. thought that violets needed lighter soil than he had). No, I think they grow all right. Violets have very fine roots, and we consider in the nursery business that anything that has real fine roots needs light soil; heavy roots heavy soil.

MR. A. H. SNYDER.—We have very heavy black soil. Until the first of February our violets are first rate but after that the soil is washed down so solid they go up. I think they do better in a lighter soil. We carry them through the summer in the same way as outlined by Mr. Klehm.

MR. WIENHOEBER.—I find as a rule that single flowers sell every bit as well as the double. I sell twice as many single narcissus as I do double. People like the single. If the California violet had the same lasting qualities as the Marie Louise,

I feel sure it would sell just as well. The same thing is true in the geranium line. I do not sell a double geranium in a year.

In response to the inquiry, "Do we want a red violet?" Mr. Wienhoeber replied "I think the violet must be blue in order to be a violet."

Diseased Palms and Dracæna.

I send portions of diseased leaves from a palm and a dracæna. What is the name of the disease, its cause and remedy?

A. R. M.

The specimens referred to were received in poor condition, but appear to be portions of leaves of *Washingtonia filifera* and *Dracæna indivisa*, and are affected with what is commonly known as "spot."

The disease in this case is probably the same as that which frequently disfigures the leaves of *Pandanus utilis*, and is caused by a "mite" or insect of microscopical size which burrows in the tissues of the leaf.

Both the *Washingtonia* and the *dracæna* are somewhat subject to this trouble, and it seems to be aggravated by overwatering during the winter. Sulphur is recommended as a possible remedy, and may be applied either by dusting the plants thoroughly on both the upper and under surfaces of the leaves, or through the medium of a solution of sulphur soap in which the plants should be dipped.

W. H. TAPLIN.

Genistas.

Are *Genistas canariensis* and *G. fragrans* the same? If not, what is the difference, and which of the genistas is the best to grow?

A. J. B.

The genistas have been much mixed of late years, partly from the fact that a number of seedling variations from the original varieties have been introduced by different growers.

The two varieties that are best known are *Genista canariensis* and *G. racemosa*, *G. fragrans* being a synonym of the latter, and the chief distinction being found in the shade of color in the flowers, *G. canariensis* being lighter in color than the other.

I believe that *G. racemosa* is the best of the two, though both are very beautiful, and there is also a variety of the latter known as *G. Everestiana* that is very good, the flowers of which are nearly orange yellow.

It may also be added that while the most common nomenclature has been adopted in these notes, yet it is not quite correct, the proper name for the plants in question being *Cytisus*. W. H. TAPLIN.

Steam or Hot Water.

What system (steam or hot water) would give me best results in heating my greenhouses, and how should it be put in? My houses run east and west and are three in number, 250 feet long each, the first house 22½ feet wide, north wall 8 feet, south wall 4 feet, second and third houses are 16 feet wide even span; the houses are divided in the center on the north side by a shed and office 20 feet each way, and connecting with the shed an even span house 16 feet wide running due south.

Hot water is used now but have not enough power for the increased amount of glass, two boilers at present doing what work is required, but as I need more power should I put in one large boiler doing the whole work, and steam or hot

water? There will be about 22,000 square feet of glass.

Carnations are principally grown, but in one-half of No. 1 roses, and center house which I would like for a forcing house, benches in second and third houses are built away from the walls so that pipes can be hung or put on the walls.

The houses have no protection from cold winds and are separated 7 feet apart; the coldest weather 10 below zero the boiler pit is under the shed. I have asked prominent men in my line but answers varied so much that I concluded to ask a favor of your readers. C. B.

For a plant of 22,000 feet, your correspondent C. B. asks which of the two systems is the best; the bulk of the glass being used for carnations. This is a question over which there has been more discussion probably than any other one point of our business, and probably is as far from being definitely settled to-day as it ever was.

We have three distinct methods of heating in daily use here on rather a large scale, namely steam, hot water by gravity, and hot water under pressure, and after giving the steam three years careful and comprehensive test against the hot water we find that with us it costs about 30% more to maintain the same temperature by steam than it does by hot water. I know that this is contrary to the experience of many, but the conditions are not always the same in all places.

In many cases which have come under my notice where hot water has been changed to steam and where the latter is claimed to be an improvement it is because the hot water system was not of the best construction, with poor class of boilers, poorly arranged piping and often insufficient piping and overloaded boilers. Little wonder is it that when the system in such a place is changed to steam with ample boiler power and ample piping that a decided improvement is made, but does this clearly prove that steam heating is decidedly better than hot water? I contend it does not, rather the contrary.

To arrive at a fair and impartial conclusion I believe in taking the most approved methods, and in boilers, piping, etc., of both systems fit them up with every opportunity for both to work at the greatest advantage possible, i. e., let your hot water boilers be at least one fifth larger capacity than is ever actually demanded of them, have plenty of radiating surface (piping) for all kinds of weather, without hard firing to maintain the desired temperature, have exactly the same conditions for the steam heating system, with the best modern boilers for both systems and the result will be very different in a great many cases. In ours it is very greatly in favor of the hot water.

For that reason I advise C. B. to keep to his hot water system, adding a really good boiler of ample capacity to do all the work required. If his present boilers are good and doing satisfactory work I should not advise changing them but simply add another to them. In arranging his center house for additional heat it is very easily done by adding additional piping according to what temperature is required. For the houses where the benches are built away from the walls I should advise using 2-inch gas pipe; hang it on the sides one above the other, three of these are equal to two ordinary cast iron pipes.

In putting in a new boiler if practical and can be done conveniently it would be

MRS. CHENEY'S DISPLAY OF CYCLAMENS.
SPRING SHOW MASSACHUSETTS HORTICULTURAL SOCIETY:

a great advantage to connect it with one of the present boilers, then in mild weather, spring and fall, only one boiler might do the work easily, adding the other in colder weather; by this means quite a saving in coal is made, as the slowest fire burns considerable when kept in constantly and often in mild weather only a very little fire is needed in a large boiler, and one can easily do the work of two.

If C. B.'s houses are built on the same level all this can be very easily arranged so that an even flow of circulation can be maintained through all the houses at all times, which is a very important point in arranging any hot water system, then with care and reasonable judgement in firing he can sleep sound in all weathers, which he may not always be able to do with steam. If C. B. can make it convenient to call here at anytime I shall be pleased to show him our systems and figures for comparison between the two methods of heating and the results obtained from same.

JOHN N. MAY.

Summit, N. J.

Tightening a Tank.

How can I tighten a 3,000-gallon cypress tank put up about a year ago, second hand at that time? I expect to have a steam outfit in May to pump water into the tank, and would like to tighten it first.

F. J.

This is somewhat of a conundrum, as your correspondent does not say whether it is a round, oval, square, oblong, deep or shallow tank, so that no definite idea can be formed as to what is his trouble.

If it is a round tank supported by iron hoops it is the simplest thing possible to drive the hoops down till all the joints are quite tight; this would be done when the tank is dry, and if in the process the top hoop is driven down too low to hold the top part of the staves in proper position another hoop should be fitted tight near

the top edge. In driving the hoops a square headed cooper's mallet should be held squarely on the top edge of the hoop and the hammer used on this to avoid battering the edges of the hoops.

If it is a square tank F. J. should say where it leaks and how made, so that a better idea of how to remedy the trouble can be arrived at. Square tanks can be readily made water tight by a little extra bracing if well made in the first place. In any case when once a tank is made water tight it should be kept filled up with water at least once every twenty-four hours.

JOHN N. MAY.

Some Observations.

I have been a subscriber to your valuable paper several years, and from it I have learned many good points on different subjects that go to make up a florist's knowledge of the profession.

Experience of different writers on many subjects are at times very conflicting, and requires no little judgment on the part of the reader to apply other's success or failure to his own case. Conditions of air, soil, light, water, heat and watchfulness, tempered with good judgment, are the fundamental principles that govern the success of an experienced grower.

I have many times heard the question, "Where did you learn the business?" My reply has always been the same—"I have never learned it, and never expect to." Having been established in the business several years I realize the fact that I have it yet to learn, and the sooner some of those that have served three or four years potting and running errands realize that fact the better help they will make for their employers.

No matter how well posted a man may be on general matter pertaining to plant and flower growing, he will find others perhaps with less experience that will excel him in some things. Then my good

brother florist, don't be conceited and think that you know it all.

It is a too common error among the "old school" to think a man who has not served a number of years at the business in the "old country" don't know anything, and will try so put him down in others' estimation for the sole purpose of lifting himself up, while he may not with all his years have the ability of the belittled man.

I have had men in my employ who thought they knew it all, and others that did not know much of anything but were willing to learn. The former I have no use for; the latter I have found to make good help after a little time. I had rather have one "would be" than a dozen "has beens."

This business of ours is a progressive one, and it behooves us to keep scrambling for the top, no matter what others do to set us aside. If you ever get there don't go to seed, for some little kicker whom you may least expect will upset your big seed pod and then—well you know the result.

NAHANT.

Greenhouse Building.

[Extract from paper read before the Dutchess County Hort. Society by D. E. Howatt].

Close attention to what can be seen and heard during extensive travel among our florists would lead the writer, without hesitation, to say that a full span, north and south house, 22 feet wide, 200 feet long, iron frame, side sash, roof of 18x18 inch glass for puttyless, and 18x22 inches for putty-glazing, thirty-three degree pitch, top ventilation, 2-inch wrought iron pipe for hot water heat, and benches to fill the requirements of the owner, is about as near the general grower's ideal, as any one thing could possibly be. This house is adapted to grow about anything pretty well and a majority of everything mighty well.

If the writer were to again enter the

lists and grow stock for the market, nothing would be built but large houses, say 28 or 30 feet by 200, constructing with iron posts, iron purlins, sash bar rafters for 18x18 inch glass, puttyless glazing, top ventilation and side sash for light, and ease of working, hemlock benches, 2-inch wrought iron pipe, hung in proper pipe hooks along the sides, and on the roof supporting columns; hemlock base boards with good water table, side sash, sill and siding, no gutters, but if possible brick or cement walks. The same house with the usual embellishments could be built for private places, and perhaps as time went on and money accumulated, iron and tile would be substituted for the hemlock benches. Unless the water is needed, gutters are not only a useless expense but a great obstruction to sunlight and the rapid disappearance of snow.

Special span and exposure houses came into existence and were made necessary because of the heavy frame and small glass used in construction at that time. They are still largely used for special purposes, but they cannot fill the bill for our ever changing market necessities anywhere near so well as the even span will do.

Through American Eyes.

WINDSOR CASTLE.

The visit to Windsor Castle and its beautiful surroundings, together with the call at Turner's establishment at Slough, and "The Gardens," Dropmore, a beautiful private place bordering the Birnam Beeches, in which historic woods a stop was also made for lunch, filled in one of the most delightful and profitable days of the trip.

The first stopping place was the Royal Nurseries of the famous Turners at Slough. Here were found quite a few carnations and hardy garden pinks; the hardy varieties were blooming profusely and would be very useful if they would cover themselves with flowers here as they do there. A few good carnations were noted, among them being Mrs. Howlet Riley, resembling a light colored Daybreak and Mme. Pernet Ducher, a very free flowering kind. Dablias were grown here in quantity and the quality was most excellent. A number of the large and most perfect blooms were hooded over with a contrivance made of wire and cheesecloth, one for each flower; this kept the sun from bleaching out the color. These flowers were for exhibition purposes.

Some seventy plants of roses, different varieties, were grown in 12 to 14-inch pots and nicely staked; these were especially cared for and used as exhibition plants in the spring shows. Each pot would contain when at its best from 100 to 150 blooms. There were many fine roses of different varieties in the nursery, all appearing to bloom much better with them than in the U.S. at the same season. One of the prettiest, of which there were seen quite a number of fine flowers, was the Mrs. John Laing; it is thought very highly of in England. It was here that the Queen paid them the honor of a visit last June to see the Crimson Rambler in flower. This latter rose is regarded as a wonder by all growers and it is predicted that it will be universally planted everywhere when its numerous good qualities are better known.

American methods are not generally used in propagating carnations, the principal plan being layering outside in pots; this appeared to be successful but would hardly justify one to advertise

"THE ELEPHANT," IN BIRNAM BEECHES, OVER 700 YEARS OLD.

LUNCHING AT BIRNAM BEECHES.
THROUGH AMERICAN EYES.

plants by the thousand at "a cent apiece."

"The Gardens," Dropmore, was a very old and interesting place. Here was seen one of the finest specimens of the Cedar of Lebanon in England; it was planted over 100 years ago and was certainly a grand tree. Quite a number of large araucarias beautified the extensive lawns, one of the finest specimens being over 40 feet high, but both this and the Cedar of Lebanon were in such a position that the camera could not be used. Some standard fuchsias were also seen that were said to be 80 years old; they were quite well covered with flowers.

The Birnam Beeches, probably the largest collection in the world, is a most delightful shady grove and has been purchased by the City of London and thrown open to the public to be used as a picnic

ground. Many of the trees contained in the woods are very old but their gnarled and low spreading branches give them a very picturesque appearance. One old specimen has been dubbed the "E'ephant" and is said to be known to be over 700 years old.

After lunch enjoyed under the branches of a spreading beech a start was made for Windsor Castle, the residence of the Queen. The greenhouses, of which there was quite a range, were filled with palms and ferns of various sorts and several contained flowering begonias, gloxinias, and fancy leaved caladiums. There were also orchids, pitcher plants, anthuriums, etc. The architectural appearance of these structures was somewhat of a disappointment as they were not up to date by any means. There were several pits filled with pineapples, some of which

EAST TERRACE OF WINDSOR CASTLE
THROUGH AMERICAN EYES.

were about ready to cut; they are said to be very delicious when ripened under glass, but are difficult to grow.

The kitchen garden was very well kept, it was entirely surrounded and subdivided by five miles of walls about 20 feet high. It cost £44,000 to build these walls and they are covered on both sides with all kinds of fruit trees, apples, pears, peaches, plums, apricots, etc. The climate is not warm enough to grow many of these fruits without protection and to get the best results and provide early fruits there are a number of glass houses built against the south walls. A regular account of all the products is kept and charged up at the market rates, so that the allowance for this department may be regulated. Some 130 hands are kept constantly employed in this department. That the Royal household should need such quantities as are produced here was a matter of wonder until we were informed that it consisted of over 600 members, this number of people setting down to table every day during the Queen's residence at the Castle.

The east terrace garden adjoining the castle is beautifully laid out; it is in a depression surrounded by an earthen parapet some 20 feet high. The inside of this, slopes gracefully down to the flower beds. A number of retinoporas, handsome specimens, are used as centers of the various beds, which are planted with geraniums, echeverias, lobelias, alternantheras and other carpet bedding plants. There is a large fountain in the center of the garden and numerous statues gives the whole more the appearance of an Italian rather than an English masterpiece.

A grand avenue three miles long and 150 feet wide leads straight away from the main entrance to the castle. This is planted on both sides with what are now giant elms making it one of the most beautiful avenues in England. K.

New York.

Trade has been steadily improving, and with good weather there is no doubt of a first-class Easter business. Everybody is feeling hopeful as regards both plant and cut flower prospects. Carnations continue in short supply, a fact somewhat unusual at this season of the year, but perhaps not so difficult to explain as the general condition of the rose crop during the past few weeks. There have been occasions when for a brief time there were more roses of the commoner grades than could be easily handled by the regular store trade, but for the most of the time ever since Lent came in the tendency has been to clean up all good rose stock at fair prices early in the day, and at times there has been difficulty in supplying the demand, with the result that net figures to the growers on stock sent in have been unexpectedly good. The gross receipts of roses during the entire month of March are believed by good judges to have been not much more than one-half what they amounted to last year. Quite a number of rose growers have been getting but a fraction of what would ordinarily be expected from their plants in number of flowers, but what stock has come in has found a ready market at some price, and the net returns have been much more satisfactory because there was no big overstock of unsold flowers to eat up

the averages. Lilies are being withheld from circulation just now, and will not show up in any troublesome number until Easter business opens. It is undoubtedly true that the number of lilies being forced this year is less than it was last season, and on this account better results are looked for.

The plant men are all ready with a stock of plants which for variety, quality and quantity exceeds anything of the kind in the past, and the retailers are showing their confidence in the success of this department of their business by securing such vacant stores as are in their vicinity for the accommodation of their plant trade. "Easter branch" is a familiar sign along the fashionable retail thoroughfares. Palm Sunday, which has always been "visiting day" at the establishments of the Easter plant growers, was about as dismal a rainy day as it possibly could be, and a great many intending visitors were deterred from going, still there was a goodly number at the various prominent establishments, and all seemed willing to excuse the inclemency of Palm Sunday, since by the law of averages the chances of good weather for Easter Sunday were thereby improved.

Importers and dealers in decorative plants, such as palms, azaleas, roses and bulbs, in New York are all in receipt of a circular from Mr. C. Petrick of Ghent in which he makes somewhat caustic comment on the recent address of Mr. Robt. Craig before the Philadelphia Florists' Club on the subject of tariff on plants, and explains at length why he does not agree with Mr. Craig that a duty on imported plants of this description would be beneficial to the plant industry in Amer-

ica. Mr. Petrick's article, which he styles "well meant advice," is certainly well written advice, from the standpoint of an exporter, but there is plenty more that might be said on both sides of the subject, and we are likely soon to hear considerable of it. The advancement and future prosperity of American horticulture is the only basis upon which this discussion should rest.

The third annual invitation ball and floral fete of the North Hudson Florists' Club will be held at Frech's Casino, West Hoboken, on Wednesday evening, April 15. Chas. Menne, John Birnie and Henry Baumann are the committee of arrangements, and it is announced on the posters that "Flowers will be presented to the ladies, as usual." With all these attractions the occasion may safely be pronounced a big success in advance.

At the next meeting of the New York Florists' Club Monday evening, April 13, Mr. Elijah A. Wood of West Newton, Mass., will read a paper on his impressions of floriculture in the west. A large audience is promised.

Hanft Bros. will move from their Broadway store on May 1 to the location formerly occupied by Geo. M. Stumpp on Fifth avenue and 58th street.

Bloomingdale is advertising in the daily papers good roses at 59 cents per dozen, and other flowers and plants at prices proportionally small.

Sweet peas are coming in in fair quantities for the season. Trailing arbutus is also in.

Visiting New York: A. H. Wingett, Lenox, Mass., D. B. Long, Burt Eddy.

Washington.

There has been little or no improvement in trade since last issue; the past week was one of the duller of the Lenten season, but the outlook is brighter at present, and our florists anticipate a large Easter trade. There will be plenty of good stock to supply the demand, no matter how large, the larger the better is what the florists say. The past few warm bright days are just what the florists were wishing for to bring out their *Harrisii* lilies, which they depend upon for the larger and most attractive part of their Easter decoration. They are preparing to decorate their stores and windows in a most attractive style as most of them expect to make an unusual Easter display. Bulbous stuff is in great profusion, and while not in great demand the florists manage to dispose of a quantity each week, and at a fair profit.

The old Corcoran mansion, the home of Senator and Mrs. Brice, was finely decorated recently for a dinner. Large vases of long stemmed roses were put in every available place in the drawing rooms, with palms and ferns for a background. The hallway was set with palms and ferns, adding to the handsome effect of this beautiful entrance. The dining room was also decorated with palms and ferns. The centerpiece was a great heap of American Beauty roses, sprayed with white lilac arranged with careless grace. A broad ribbon of American Beauty shade was intertwined among the flowers, the whole length of the table, with elegant effect. Fronds of *Farleyense* were strewn over the cloth. Gold candelabra filled with lighted tapers, shaded by caps of gold, completed one of the largest dinner decorations of the Lenten season.

Magnolia Halleana is beginning to come in in some of our parks; those in sheltered places are in fall flower.

WHITE AZALEA. BLUE CREPE ABOVE, WHITE CREPE BELOW, BOWS OF WHITE SATIN RIBBON.

A floral piece recently presented to Senator Blackburn was in the form of a huge shield, being a representation of the coat of arms of Kentucky, with the motto, "United we stand, divided we fall." The words encircled two figures clasping hands, represented by doll babies dressed in black silk coats and trousers of Kentucky blue jeans. The shield was made of white carnations and the stars in the blue field of immortelles were worked in chenille. The shield was crowned with a horseshoe of *La France* and *Perle* roses. The whole was supported on a base made of roses and orchids. There were several smaller floral offerings, among which was a large wreath of laurel tied with a bow of purple ribbon and a large bunch of violets. A bunch of twenty-four long-stemmed American Beauties and a large bunch of Bridesmaid roses were also conspicuous.

Many of the most prominent women who are social leaders in Washington have formed themselves into what is known as the "National Flower, Plant and Fruit Guild." The duties of those who have it in charge will be to collect flowers in various ways, one way being to solicit them from society people who give large entertainments to give the flowers after they have been used for decorative purposes to the hospitals and poor, instead of having them taken away by the florists. Potted plants and fruits will be given in the same way. At the Vanderbilt-Marlborough wedding and at the marriage of the daughter of ex-Secre-

tary Whitney, where flowers were used in profusion, the flowers were given (at the suggestion of the ladies of the guild) to the hospitals and poor of New York; the Washington association proposes doing the same. They are confident of success and think much good will be done among the institutions of sickness and misery through their efforts.

REYNOLDS.

Boston.

Easter week starts in with a decided scarcity of carnations in this market. Some there are who profess to believe that the growers are holding back their flowers until Easter, and that the scarcity is more apparent than real, but is not so easy to demonstrate this, and there is every inducement for those having carnations to bring them in at once. With prices ranging from \$3 to \$6 per hundred as they are at present writing it is hard to see where anything is to be gained by withholding stock, and one who does it and gets left will deserve little sympathy. Roses are selling fairly well, violets and bulb stock slowly; *smilax* is very scarce and lilies are being held at stiff figures. Of lilies there are but few seen here besides *longiflorums*. *Candidum* is almost extinct, and Boston growers have a spite against *Harrisii*. Among the choicer flowers seen are quantities of handsome yellow primroses. Some of the improved strains which growers control here are grand. One grower has been offering sweet williams at the market, but they

ARAUCARIA FESTOONED WITH PALE GREEN BABY RIBBON.

BOUGAINVILLEA SANDERIANA

are not a pronounced success. Heath is not as plentiful as in past seasons.

W. H. Spooner showed a bloom of the new hybrid tea rose, "Pink Rover," on the last day of the exhibition. It resembles Malmaison in color and form but has a delicious Jacq fragrance.

The last lecture of the season at Horticultural Hall was by Prof. E. B. Voorhees, of the N. J. Experiment Station, his subject being "Manuring Orchards."

Visitors to Boston: E. O. Orpet, A. P. Meredith and Jos. Clarke, Jr., S. Lancaster; H. Huebner, Groton; Jos. Fuller, Leominster; J. F. Huss, P. J. Donohoe, E. J. Norman, Jas. Paul and Geo. Thompson, Lenox, Mass., and Robt. Patterson, Portsmouth, N. H.

Pittsburg.

The Florists' Club held the regular meeting on Thursday night, March 26, with a very fair number in attendance. Two new members were elected, Geo. Christ, with Bauer & Son, and P. Myers, and one name proposed for action next meeting. The club decided to tender to Mr. Wm. Falconer, the new superintendent of Schenley Park, a reception, extending to him a fraternal welcome on his coming here; a committee consisting of Henry Negley, Samuel McClements and George W. Burke was appointed to make all necessary arrangements and announce the date and time, when it is hoped we will make Mr. Falconer feel at home in his new location. Wm. F. Lauch and Geo. Oesterle exhibited two pots of very fine Harrisii and a large bunch of carnations, over 100, consisting of Portia, Day-break, Scott, Albertini and Fishers, which were admitted to be equal to any heretofore shown and excited universal admiration. After the meeting adjourned

the members enjoyed a social, refreshments being served in our meeting room, each member enjoying himself as best suited him, the majority, however, inclining to a game of cards. The unanimous opinion was that a "social" in our own room was far superior to one where we had to go away from it to have it, as we have heretofore been compelled to do.

The trade has not improved since last week; everything very quiet, but all are busy preparing for the Easter rush, which bids fair to exceed in volume of business that of previous years. Flowers of all kinds will be plenty, with the exception of carnations, and the supply of those will be considerably less than the demand.

Mr. John Bader, treasurer of the club, and one of our prominent florists, has met with a very sad affliction, his wife dying after a short illness of five weeks. Mrs. Bader will be very greatly missed by her many friends, both in the family and the church circles. The very great number of tokens of loving sympathy, evidenced to Mr. Bader and his daughter the esteem in which Mrs. Bader was held, and showed the heartfelt sympathy of his brother florists and many friends to them in their very great bereavement.

Mr. M. C. Dunlevy of Carnegie has suffered very greatly this week. On Monday morning his son Harry went into the greenhouse at about 3 o'clock to look at the thermometer, striking a match for that purpose, an explosion of natural gas resulting, badly burning both him and the man, Paul Bruno, blowing off a great deal of the glass, breaking the ventilator apparatus, and destroying over 7,500 carnation plants. The gas mains are laid in the public road adjoining the houses; they became leaky, and the gas went through the ground, filling the houses, and Mr. Dunlevy not using it was not on

the lookout for any there. He was cutting about 1,500 carnations a day, having completed the two houses and started as a wholesale grower last fall. They were filled with the leading varieties, and he was very successful in their culture. The plants are a total loss, and this coming just before Easter makes it doubly severe. His son was very severely burned about the face and hands; Mr. Bruno not so badly burned. The doctor thinks that neither inhaled the flame and that they will recover. Everyone expresses great regret at his misfortune and hopes for the speedy recovery of those injured. Mr. Dunlevy will surely recover damages from the company owning and operating the gas line. REGIA.

Bougainvillea Sanderiana.

This beautiful flowering plant fully justifies all that was claimed for it when introduced by Sander two years ago. Its dwarf habit, profuseness of bloom and brilliancy of color make it a most welcome addition to the list of Easter flowering plants. The plant illustrated was grown by Julius Roehrs of Carlton Hill, N. J.

St. Louis.

Trade for the past week remained fair; the weather continues warm and spring-like, and the plant shipping trade has commenced to boom. Easter stock is in good shape all along the line, and should the weather keep on warm there will be plenty of it on hand at all the growers'. The flowers that come in now are good and in sufficient quantities to satisfy the buyers. The fact that there will be an increasing demand is proven by several large orders that have been placed already a week ahead.

Easter prices will take effect April 1. Quotations made by the wholesale men are as follows: Roses will be from \$8 to \$10, Beauties \$35 and \$50, carnations \$2 to \$3, valley \$3 and \$4, Harrisii and callas 10 to 12, daffodils 3 to 4, single 50 cents; tulips 2 to 4, violets, single 35 cents, double 75 and \$1; smilax 15 and 18.

The Jordan Floral Co. have commenced cutting from one of their Jacq. houses, and during the week showed some elegant cut blooms in their windows; they expect to cut a large lot for Easter.

On Monday night the bowlers rolled some practice games for their match with the Magnolia Club for next Monday night, April 6, only two balls being used, and some good scores were made. The boys are all hopeful of winning at least three games of the four to be rolled. After the rolling the team was made up as follows: J. J. Beneke, captain; C. A. Kuehn, John W. Kunz, F. C. Weber, Emil Schray and D. Helwig. All members are requested to be present, as well as all florists. The alleys are on the northeast corner 11th and Victor. J. J. B.

Buffalo.

As the writer has been debarred from any more violent exercise for the past seven weeks than looking out of a window he has been able to observe closely the wonderful variety of weather that has visited our city this past two months. Blizzards of snow with very low temperature and sandwiched in once a week with a rainy day has been the order of things. But a change has come, and on Sunday last the sun shone out, soft south winds turned our snow banks into babbling brooks by the gutter side, and everybody is happy, particularly the florist who has wagon loads of flowering plants which he hopes to deliver on Saturday. If any one thing in a florist's existence has a tendency (mind, I only say a tendency) to make a pious florist profane it is to wake up on the Saturday before Easter and find there is 5° of frost in the air. From daylight to 9 a. m. the thermometer is consulted at the rate of forty-seven times to the hour. We have all been through it, and survived, and will have to perhaps again, but let us hope not this year.

I have not been well located of late to observe what Easter stock exists in the different establishments, but from authentic sources I know there is a very large quantity of good Easter stock in town, far more than previous years I feel sure, and the great bulk of it is in fine shape. Many of the stores are early in the week making a regular show. Palmer's large store is full of attractive plants, and Jack roses by the thousands. Hale has already overflowed onto the sidewalk. Rebstock's fine window is very attractive, and Scott's store is full of lilies, azaleas, and the usual seasonable stock. The promise of a cut of 15,000 good carnations from his Corfu houses pleases son Philip. Anderson, Adams and Mepsted & Asmus are all making fine displays. With all this abundance of plants it is encouraging to believe it will be all wanted. Cut flower orders are nearly always delayed till the last day. But already we can tell that the demand for a plant for an Easter gift is going to exceed that of any former year. Church orders and memorial designs, which ten years ago were so much depended on, are now of very secondary importance, but the lack of this part of the business is made up twenty-fold by the general purchase of plants by all classes.

VIEW IN THE STORE OF MR. E. WIENHOEBER, CHICAGO.

I cannot give you a list of the visitors in town of late, for I have missed many, but of the English speaking ones I can swear I have seen within a few weeks Mr. Outram, of Reading, England, and Mr. Mott, of Riverton, and last, but very recently, Mr. Atkins, of Short Hills; for a brand new married man the latter looked remarkably well.

If the editor will grant me space for a few words I wish to say that since I met with my misfortune on the 11th of February I have received many letters of sympathy from kind brother florists, for which I feel very grateful. Although I can only attend to my business yet at long range I intend to be in Cleveland the end of the month if it takes a leg, I mean a crutch.

WM. SCOTT.

Philadelphia.

April the 1st, all the growers are sold out, it has rained all day and everything about the retail city establishments looks lovely but the countenances of the proprietors. Business has not been up to expectations, particularly in the cut flower line. First-class roses go begging, and there is no stability to prices. Brunners are to be had at \$3 per dozen. Laings and Baroness the same, Jacks are 10 to 15 per hundred. All the best teas go for 6 to 8 with the majority at 6. Carnations 1.50 to 2.00, sweet peas 2 to 3, valley 3 to 4, daffys and tulips 3 to 4. There is not much prospect of a rise in price for Easter except perhaps for carnations.

Of the Easter stock, for the most part it looks up to the average, there are not any new things to speak of. Rhododendrons and pot lilacs are more plentiful, hydrangeas are quite scarce and the quality is not up to the mark, Bevis and Anderson had the bulk of the crop. George grows no Easter stock but the hydrangea, but he does this well and has led the van for a long time. Robt. Craig has a lot of hyacinths in pans that should be good sellers, they are certainly pretty.

There seems to be plenty of lilies, plants in 6-inch pots with from 5 to 8 flowers sell for 50 cents each, some growers with selected stock ask 10 cents per flower straight. Small azaleas sold out early, the size that brought \$1 each were very much in demand. Whites were scarce, more of this color should be kept for Easter. Pot roses are in great shape with several growers and make fine Easter plants.

Pennock Bros. were fortunate in having the large store next to theirs vacant, they have it full of choice stock and with their increased show should do a large business.

Growers now take a pride in sending their stock in the best condition; it is all carefully staked with green stakes, tied with green cord, and best of all the pots are scrubbed, all of which is quite an advance and a move in the right direction.

Graham's new store is now open and is one of the coziest places in the city; it is fitted up very tastefully. The greenhouse in the rear gives an opportunity to make a good show with choice plants. The large room on the second floor is arranged for a show room for fancy baskets, etc.; the whole store is a model and quite up to date.

K.

Chicago.

Easter stock has been helped along by several very clear bright days, although the weather has been cold and windy. Shipping trade has been brisk all the week. Prices held up very well up to Friday night, but it was generally thought that second grade flowers would fall greatly on Saturday. Without doubt many unwise growers were holding back, as usual, to meet with the annual shock at the last moment. Really first class stock has not been overplentiful at any time during the week, either in roses or carnations, and the poorer grades are the only things likely to suffer. The first quality roses were quoted at \$8, excepting some select Brides and Bridesmaids at \$10, and extra Testouts at \$12. On

VIEWS IN THE STORE OF MR. E. WIENHOEBER, CHICAGO.

all really good stock there was a tendency to hold to the outside figure quoted.

There was a great deal of bulb stock in, including both forced and outside varieties. R. E. Kennicott, of Carbondale, sent in the first Illinois outdoor stock of the season, including fine single daffodils. Paper white, which has been in a state of innocuous desuetude for a week or two, appeared again. Valley sold out quickly, being greatly in demand. Lilies seemed, on Friday, to be plentiful enough for any calls, most of them going for \$12.50.

A novelty in our market was *Antirrhinum majus*, both white and colored. It was sent in simultaneously by three different growers, Mrs. Rockafellow, W. N. Rudd and M. Tittle. The blooms were large, on fine spikes, the white being especially beautiful; it sells for \$10 a hundred,

A new grower for the Chicago market is Morris Tittle, of Jefferson Park. He is sending in good carnations at the present time.

November 10 to 14 inclusive are the dates selected for the chrysanthemum show of 1896. This is a week later than last year, but by the change the excitement of presidential election week is avoided. The preliminary premium list is being printed and will soon be mailed to members and possible competitors. Extra copies may be had by addressing Mr. W. N. Rudd, Mt. Greenwood, Ill.

At the annual election of the Lincoln Park Commissioners last Wednesday officers were elected as follows: F. H. Winston, Pres.; Philip Henrici, Vice-Pres.; G. W. Weber, Secy.; Martin Becker, Auditor. Mr. Andrew Crawford, who has been president of the board for the

last two years, not only declined to serve another year as president but has resigned as a member.

Mr. Van Zonneveld, Sassenheim, Holland, was a recent visitor.

Rochester, N. Y.

Extensive preparations are being made by our storekeepers for a large increase in Easter trade, and they are stocking up with plants of every description. Flowering stuff in great abundance is to be seen everywhere; azaleas in particular are in very good condition. Pans and pots of hyacinths, tulips, narcissus and valley evidently sell well, for they are exhibited in great numbers in all show windows. Pans of violets, clean and healthy stock, well flowered, are very popular. Large specimen marguerites covered with flowers make a fine show in some of the places between the mass of blooming azaleas or cinerarias. Tall, tree shaped genistas are a specialty in one place and are well grown; their dense rounded heads with the multitude of blossoms form a perfect ball of immense size. Low and compact plants of the same species, so popular for Easter decorations, can be found at every store in all sizes. Lilies are coming on in good shape and will not be so very scarce after all if the moderate and mild sunny weather we are having at present should continue to the end of the week. H. P. roses in pots are better this year than usual, being of extra large size and very bright in color, the foliage large and of a very deep green; Magna Charta, Laing, Brunner, Luizet, Jacks and Mabel Morrison are the only varieties grown around here for this purpose. In addition to the flowering plants, ferns, dracaenas of various kinds, ficus, araucarias, aspidistra, aralias, palms of every description and in all sizes are leading features in the store exhibitions. Indications point to an increase in the bulk of business, and all our florists are in good spirits, as orders for plants and cut flowers have come in earlier and more liberally than in former years. The cut flower trade at Easter for the last few years has declined to some extent, as prices were rather high; this year with moderate, though somewhat advanced prices, expectations are entertained for a more lively demand in this line, but the profits may not be as large as they should be.

In the wholesale market there was very little waste in the past week, everything being taken readily as soon as coming in, and at very fair prices. Carnations are rather short in supply and bring from \$2 to \$4; teas from 10 to 15 for extras; Beauties 30 to 40. Violets still bring 75 cents to \$1, being rather scarce, but we expect this week to have first crops of the cold frames stock coming in, and they probably will fetch good prices until after Easter. Smilax is not plentiful, and brings 20 cents.

The retail trade has been very good for the past week, with a marked scarcity in carnations, which retail at 40 to 60 cents per dozen, according to quality; tulips and narcissus are not so plentiful as formerly, and are readily disposed of. Valley is sold at 75 cents to \$1 per dozen and is excellent in quality. Violets 1.25 to 1.50 a hundred, and teas from 1.50 to 3 a dozen. No attempt is made by anyone to cut prices, for there is no overstock on hand in any of the establishments.

Vick & Hill have opened a store on Main street, and from Thursday to Saturday, the announced opening days, the place was crowded constantly with customers from morning to night, anxious

to see the grand exhibition of flowering plants and cut flowers of every description. The store is located on our very best business street, and in the most frequented part of it, so there is no doubt that the firm will be prospering; they have the best wishes from their brother florists and friends for a continued success in the new venture. The decorations in the newly opened store were both elaborate and tasty; ceiling, windows and the sides were handsomely festooned with smilax and asparagus; the large icebox with plate glass front was filled to its utmost capacity with fancy roses, carnations and valley arranged with good taste. The store windows and one side of the interior were banked with flowering plants of every description, azaleas being prominent. No place was left unoccupied and on the counters and stands vases of immense size were filled with monstrous bunches of the finest long stemmed roses, high quality carnations and narcissus, interspersed with smaller vases of valley, violets, freesia, etc. It must be said that their opening was a very flowery affair, and visitors completely filled all the passage ways for the most part of the opening days, so that the proprietors and clerks had a very busy time administering to the wants of the throng of customers. J. B. K.

San Francisco.

This past week's trade was pretty well up to the average with most of the florists, although there are a few who cannot say as much. As a general rule the quality of stuff coming in is extra good. This is especially true of Beauties. Testouts are of pretty good quality and seem to sell very well. Some Belle Siebrecht are to be seen, and take very well indeed. It seems as though this rose has come to stay as a commercial variety, as it is all that can be desired both as to color and length of stem.

As to violets they have had their run, and the quantity coming in is shortening up gradually. Some very fine white and yellow carnations are noticed. These come from John Carbone's place at Berkeley. Harrisii are quite plentiful, and there is not much probability of there being a scarcity of them at Easter. Some outside lily of the valley was seen last week, and it compares very favorably with the inside stuff.

Lilac is to be seen everywhere now. The street fakirs just through the corners with immense bunches which they offer at 5 and 10 cents.

Mr. M. Miller, who had the store at 15 Geary street for several years, has sold out and intends to take up gardening again.

The firm of Antonnini & Co., at 31 Geary street, has dissolved partnership. Mr. Shannahan has bought out the interests of all the other parties with the exception of Mr. Antonnini. The business will be run at the same place under the firm name of Shannahan & Antonnini.

Mr. A. Hilbert has opened up a store at 15 Geary street lately vacated by Mr. M. Miller. This was Mr. Hilbert's first store in San Francisco, and he hopes to regain his old trade again.

Mr. Matt Leonard, who has been in the seed department of the Sunset Seed and Plant Company for the last four years, has resigned and as yet is undecided as to his future movements.

Mr. Frank Pelicano and Mr. Angelo Rossi, his young floral artist, spent last Sunday in Menlo Park.

The San Mateo County Floral Society has issued their program of prizes for the

rose show. Prizes will be offered for the best displays of roses, sweet peas, ferns, carnations and decorative plants.

The thirteenth semi-annual rose show of the California State Floral Society will be held in Maple and Marble Hall of the Palace Hotel April 1, 2 and 3. The society is making every effort to make this one memorable as an educator. They have issued complimentary tickets to all the orphan asylums in the city and other charitable institutions with the idea of getting the young people interested in flowers.

Last week, at Maple Hall in the Palace Hotel, the California State Floral Society gave a very interesting exhibition. Mr. Carl Purdy of Ukiah exhibited over twenty varieties of native bulbs and was awarded a certificate for his exhibit. The new "Golden Gate" violet was also shown and was the great object of interest to the trade. It resembles the California somewhat, but it has a very dark pleasing color, combined with a great size and length of stem that will make it a valuable commercial variety. Mr. de Roche, who originated the California violet, also had on exhibition two more new ones—one called the Duchess of Marlborough and the other Princess of Vanosa, both of which he imported from Italy. A paper on iris was read by Mrs. L. Walker. Mrs. Geo. C. Ross received first prize for violets and Mrs. Lyellan of San Leandro received first for imported bulbs. The show was a very successful and interesting one.

The following cities have begun arrangements for floral carnivals since my last viz: Los Angeles, Santa Barbara, Healdsburg and San Jose. There will be scarcely a large city in California this spring that will not have a carnival.

The azalea show given at F. Ludemann's nursery, Baker and Lombard streets, on the 13th, 14th and 15th, was a great success. It was held under the auspices of the California State Floral Society and its object was to awaken more interest in this beautiful plant, which can be flowered outside in March or April. Mr. Ludemann had several thousand plants, including the best varieties for forcing and outdoor planting. The azalea houses were appropriately decorated with palms and evergreens and the gorgeous display of bloom that met the eye of the visitor was particularly striking, and called forth much comment on the artistic manner in which they were arranged. Immense throngs of visitors filled the greenhouses as long as the show lasted. Many of the trade also attended to get better acquainted with the best sorts for forcing. Much credit is due Mr. Ludemann for his efforts to awaken the interest in this handsome plant which we so seldom see in the florists' stores here. The society also extends its thanks to the gentleman for his kindness in holding the exhibition.

METEOR.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advts. not admitted under this head.

SITUATION WANTED—By a first-class rose grower and propagator; single; 8 years' experience. Good references. J. L. care American Florist.

The Advertising Department of the AMERICAN
FLORIST is for Florists, Seedsmen, and dealers in
wares pertaining to those lines ONLY. Please to
remember it.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Wednesday to se-
cure insertion in the issue for the following Saturday.

Address THE AMERICAN FLORIST CO., Chicago.

In the adv. of T. W. Wood & Sons on
page 956 of last issue the size of tuberose
bulbs should read "3 to 4 inches in cir-
cumference" instead of "2 to 4 inches."

THE CALIFORNIA GARDEN is the title
of a new monthly magazine published at
San Jose, Cal. Bourguignon & Bourns
are the publishers, and Imogene E.
Johnson of Los Gatos is editor.

A COPY of the proceedings of the Impe-
rial Russian Horticultural Society for
1895 has reached us. It is neatly printed,
in the Russian language, and no doubt
contains much of interest to Russian hor-
ticulturists.

MR. WM. FALCONER arrived in Pitts-
burg April 1 and is now installed as
superintendent of Schenley Park, that
city. The change does not affect his re-
lation to the publication GARDENING, of
which he remains the editor.

SOME FINE CINERARIA blooms, measur-
ing from 3 to 4 inches across, were re-
cently received by us from John Smith,
Cleveland, O. In addition to size their
color was very good, giving evidence of a
superior strain. Mr. Smith had a large
batch of these plants, which would come
in well for Easter.

WE ARE most pleased to be able to say
that President Scott is sufficiently recov-
ered from his injury and consequent illness
to be able to write. In another column
will be found a Buffalo letter from his pen
and he hopes to be able to resume his
weekly seasonable hints soon. He will
ask Secretary Stewart to call the meeting
of the Executive Committee of the S. A. F.
for the last week of this month, believing
that he will then be able to attend. He
says: "On fine days I shall soon begin
to get out on the side walk and practice
walking."

The Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

S. E. BRIGGS, Pres.; T. W. WOOD, 1st Vice-Pres.; ALEX. RODGERS, 2nd Vice-Pres.; A. L. DON, 114 Chambers St., New York, Sec'y and Treas. The fourteenth annual meeting will be held at Niagara Falls, N. Y., June 9 to 11, 1896.

VISITED NEW YORK: W. H. Maule, S. M. Pease, S. F. Millard.

APRIL TRADE in the east starts in strong and all look for good business.

MR. NICHOLAS HALLOCK of Queens was appointed member of Advisory Board of New York State Experimental Station at Geneva by Governor Morton on March 30.

THE SEEDGROWERS around Santa Clara and Menlo Park, Cal., are jubilant over the bountiful rains which we had last week. The onions with but few exceptions, where the water laid too long on the ground, are looking excellent, and so far seem to be clear of the blight. Sweet peas in some places do not seem to be looking so well, but hopes are entertained that the last rains will bring them round all right. The lettuce and celery crops seems to be doing well, also turnips, but the latter are not clear of that destructive fly which generally infests them a little later on. METEOR.

Seed Contract Awarded.

WASHINGTON, March 31.—Secretary Morton has let the contract for the 10,125,000 packages of vegetable seeds to be distributed to the public under the recent act of Congress to D. Landreth & Sons of Philadelphia. The price fixed is \$70,000, the seeds to be delivered subject to germinative test, under a very carefully drawn contract, free of cost at the Department in Washington ready for mailing.

The contract for a million packets of flower seeds was let to L. L. May & Co. of St. Paul, Minn., at one half cent per packet.

Under this new method of buying seed and compelling the sellers to put their own firm names upon the packets it is believed by the Secretary that a better quality of seeds will have been secured.—N. Y. Commercial Advertiser, March 31.

Catalogues Received.

Letellier & Son, Caen, Calvados, France, new strawberry; A. Blanc & Co., Philadelphia, plant novelties; C. E. Allen, Brattleboro, Vt., seeds and plants; Kissena Nurseries, Flushing, N. Y., nursery stock; Grainger Bros., Toronto, Ont., seeds and plants; Edmund Mauthner, Budapest, Hungary, seeds and plants; Louis Vieweg, Quedlinburg, Germany, seeds and plants; H. Cannell & Sons, Swanley, England, seeds and plants; J. G. Harrison & Sons, Berlin, Md., fruit trees and plants; J. Schilpzind & Sons, Hillegom, Holland, bulbous flower roots; Vilmorin Andrieux & Co., Paris, France, seeds of trees, shrubs and greenhouse plants.

Worcester, Mass.

The condition of trade continues good, and we have had practically no difficulty in disposing of all the stock coming in at remunerative prices. Carnations are in rather short supply, especially firsts and extras, caused partially by the dullness of the weather and crops being off; violets are also rather scarce and not as good as we have been getting them; they are retailing for \$1. Perhaps roses are the only flowers that approach an oversupply, but no doubt we can handle them at good prices if the weather is only favorable. Von Sions are selling readily this winter, but tulips go a trifle slower, though the quality has improved immensely; we are getting good doubles

now. Dutch hyacinths have gone very slowly, while the miniatures in pans and cut are selling easily at \$1 to \$1.50 per dozen.

Lange has a nice crop of antirrhinum that sold slowly at first, but now that people are acquainted with its keeping qualities it is getting more popular. The sales of white lilac are also improving. Harrisii are selling better than ever, and valley fairly well. A. H. L.

Toronto.

The weather for the past few days has been fine, warm and springlike and great banks of snow that looked as if they would be with us until the middle of June have very nearly vanished. If the fine weather will only stay until after Easter the business done at that time will likely beat the record. Already I hear murmurings that there is likely to be an insufficiency of cut flowers, although the supply will without doubt be much larger than in former years.

Carnation Meteor is according to Mr. Tidy a first-rate thing and it sells well.

Dunlop is getting everything in readiness to put up two houses as soon as the frost goes out of the ground. E.

Louisville, Ky.

The Kentucky Society of Florists held its annual spring exhibition March 26 to 28 and it was a great success. All of the members took hold of the work with a will, particularly Mr. Jos. Coenen, who is one of the hardest workers in our society.

The wife of Wm. Walker, the florist, died March 19. Nearly all the florists of the city attended the funeral in a body, and there was a large number of floral designs sent by the florists. S. J. T.

Lancaster, Pa.

Mr. B. F. Barr has met with good success in growing carnations this season; his plants are looking well, healthy and vigorous and the daily yield is highly satisfactory. Three years ago Mr. Barr started in business with about 20,000 feet of glass, the whole being almost entirely devoted to carnations. With

Florists' Sweet Peas

New Sweet Pea "America"

Is more distinct and striking than any other variegated Sweet Pea in existence, and is of the large flowering type. Its color is a white ground and through the center of the standard is a wide carmine scarlet blotch veined with fine scarlet lines running toward the edges and showing in the same manner on the wings. The dashing contrast of the heavy scarlet blotch on the white ground makes the blossoms very effective in a mass of cut bloom or when flowering in the garden. It is indispensable for any complete collection of colors in Sweet Peas. Pkt. 15c; 2 for 25c; 5 for 60c; 10 pkts. \$1.00; 100 pkts. \$7.50.

BLUSHING BEAUTY, clear "Daybreak" pink, largest size. Oz. 5c; 1-4 lb. 12c; 1 lb. 35c; 5 lbs. \$1.50.

COUNTRESS OF RADNOR, clear lavender, very large flower. Oz. 5c; 1-4 lb. 15c; 1 lb. 45c.

EMILY HENDERSON, pure white, large early. Oz. 5c; 1-4 lb. 12c; 1 lb. 35c; 5 lbs. \$1.50.

HER MAJESTY, clear bright rose, very fine flower. Oz. 7c; 1-4 lb. 15c; 1 lb. 45c.

FIREFLY, brightest fiery scarlet, large. Oz. 10c; 1-4 lb. 20c; 1 lb. 60c.

MRS. ECKFORD, best large yellow. Oz. 7c; 1-4 lb. 18c; 1 lb. 55c.

MRS. SANKEY, large, white. Oz. 5c; 1-4 lb. 15c; 1 lb. 40c; 5 lbs. \$1.75.

INVINCIBLE CARMINE, deep crimson scarlet. Oz. 6c; 1-4 lb. 12c; 1 lb. 35c.

TRUE LOTTIE ECKFORD, white, blue edge, large. Oz. 5c; 1-4 lb. 15c; 1 lb. 40c; 5 lbs. \$1.75.

News Notes.

SALEM, O.—F. C. Morlan, for some years with J. E. Bonsall, died March 5.

OSWEGO, N. Y.—The graperies of Mr. Swits Conde were damaged by fire on the 25th.

LITTLE ROCK, ARK.—Spring trade has opened up better than ever. Peach and pear trees are in bloom.

MONTPELIER, VT.—Ernst Jacobsen, recently employed with W. L. Draper, has opened a flower store in this city.

BENTON HARBOR, MICH.—The Western Michigan Nursery Co. has been organized here with a capital stock of \$50,000.

STEVENS POINT, WIS.—The dwelling house of Charles Helm, the florist, was recently burned. Loss \$600; insurance \$425.

HARTFORD, CONN.—The spring exhibition of the Connecticut Horticultural Society took place in Jewell Hall on March 31, April 1 and 2.

BRISTOL, CONN.—The greenhouses of Frank Hanna were destroyed by fire on the morning of March 28; loss \$1,000, partially insured.

SAVANNAH, GA.—Wolf & Co. are building a new rose house 18x100, equal span, running north and south, with 2-foot sash in east wall. Raised benches.

WHITE PLAINS, N. Y.—Richard Cottrell, gardener to H. A. Schermerhorn, accidentally shot himself with a revolver on March 16 and is now at the hospital in a very low condition.

DETROIT, MICH.—The Western Club recently gave a flower festival here, which was a very successful affair. Plants and flowers were sold, and a program of music, etc. rendered each evening.

NEW HAVEN, CONN.—Chas. E. Langdon has started an extensive nursery on the borders of Lake Whitney, which will be known as the Lake Whitney Nursery. W. B. Conway will be in charge, as nurseryman.

NORTHAMPTON, MASS.—The spring flower show at the City Hall closed on the evening of March 26. As an exhibition it was a great success, but the public failed to appreciate it and the attendance was disappointing.

CORNING, N. Y.—A. H. Woepel & Bro., florists of this town, are making preparations to go to Germany to obtain their share of a very large estate left by an uncle. It is said that the share coming to these gentlemen will amount to several million dollars each.

EDWARD SWAYNE.
CARNATIONIST
Kennett Squ Pa
Feb 1906
Gentlemen,
We take pleasure in purchasing 25 our column indicates one should like to draw you at London particularly to Carnations. Eldorado which we believe is destined to take the leading place among yellow, as it has shown up equally well on each side and in the market, bringing double the price of ordinary varieties also to Fenquhar Violet, which is making quite a stir in New England and of which we have very bright clean stock.
Yours truly
Ed Swayne

LA FAYETTE, IND.

EMMA WOCHER, The New Shell-Pink Carnation

This Carnation is of a "lively bright shade," deeper than Daybreak, blooms measure from 2 to 2½ inches in diameter, fragrant, with a stem that carries the bloom erect at all times, calyx perfect, flower of good form; will grow erect with no other support than a V shape wire netting and is pronounced by all who have seen it to be an acquisition and many orders have already been booked. In our Cincinnati market it sells more readily than either Scott or Daybreak; it is not a cropper but a continuous bloomer.

Price for strong well-rooted cuttings, \$10 per 100; \$75 per 1000; 500 at 1000 rates. Cash must accompany all orders or satisfactory reference. Address

R. WITTERSTAETTER,

H. WEBER & SONS, Floral Park, Oakland, Md.

NEW CARNATION, W. D. SLOANE.

This new sort will prove a leader to all Florists. We know of no better variety of its color, and none can equal it in fragrance. The plant is a strong and vigorous grower, needing but little support, with dark foliage about as heavy as Tidal Wave. Flowers are large, good substance and lasting qualities, borne on stiff stems 15 to 20 inches in length; color a beautiful cerise. Very profuse bloomer.

PRICE, \$10.00 PER 100; \$75.00 PER 1000.

Pitcher & Manda, Short Hills, N. J.

Sam'l S. Pennock, 1612 Barker St., Philadelphia, who handles the entire crop of flowers of this new variety, says under date of March 26th, 1896: "Your W. D. Sloane, the way you grow them, are certainly fine, with the long stiff stems and good sized flowers. A ready sale for them is found at an advanced price over the average varieties."

WHEN writing to any of the advertisers on this page please mention the AMERICAN FLORIST.

St. Paul.

Easter trade promises to be good. The store men are laying in a big supply of lilies and other plants, while the growers are busy putting the finishing touches to their stock and filling orders.

There is a good supply of lilies and a fair supply of other blooming plants. In cut flowers there will not be enough roses and carnations to go around. Bulbous stock is quite plentiful.

Some of the large stores are having their Easter openings, and nearly all use flowers or potted plants. One large clothing store gave away 5,000 roses last week; another one this week will place on sale potted lilies and hyacinths. All this tends to dispose of the surplus, and while some may growl about its hurting the trade, we think their fears are imaginary. The people who buy plants at such sales are not the ones who would buy from the florist.

The stock of L. G. Venzke, insolvent, is being sold at very low prices. This affects the regular florists' trade quite unfavorably.

Von Zonneveld Bros., of Sassenheim, where recent callers. They were selling bulbs.

L. L. May is in the East on a business trip. FELIX.

Cincinnati.

Business this week has shown a marked increase, especially among the market florists. Trade on the whole has been better than in the four previous weeks. The flower market on Saturday was well worth seeing. All of our florists were on hand, and their stands were well stocked. There were some well grown specimen plants of *Deutzia crenata* seen, which makes an ideal Easter plant. Lilies, tulips, hyacinths, *spirea*, *cineraria*, roses, azaleas and decorating plants are as usual in the lead. Carnations and roses will not be over plentiful for Easter, but there is enough other stock to go around. P. Popp had the best *cinerarias* in market. H. L. Sunderbruch is cutting some extra fine U. Brunners which wholesale at from \$3 to \$5 per dozen.

Mr. Frank Church, formerly of Chicago, is now engaged with Mr. Bob Betz, the Central avenue florist.

Hatten Bros., Columbus, are putting in a cut flower department in connection with their drug store. Karl Brown is manager. He was formerly with A. W. Livingston. HENRY SCHWARZ.

Nyack, N. Y.

Tunis DePew died at his home on Saturday evening, March 28, of heart failure, aged 64 years. Mr. DePew has been in declining health for the past three years. His place was the largest greenhouse establishment in Rockland County, and probably one of the oldest in the country; the business having been established by his father many years ago, and carried on by Tunis DePew since the time of his father's death, twenty years since. He leaves a widow, a daughter and two sons, the daughter being the wife of Mr. Blauvelt of Purdy & Blauvelt, New York. Mr. DePew was a man highly esteemed by his neighbors, and had been honored with the position of presidency of the School Board for a number of years. The florist business will be carried on by his two sons.

Always mention the American Florist when writing to advertisers.

Providence, R. I.

The quantity of bulbous stock grown this season has been rarely equalled in former years, and, unless the demand increases in proportion to the supply, the indications are that the market will be glutted with this sort of stock. Among other things, there is an abundant supply of Harrisi, the quality of which, on the whole, is all that could be desired. Indeed none of the local growers ever had them any finer.

For obvious reasons, it may perhaps be regarded as fortunate that roses and carnations promise to come in in more moderate quantities at Easter; as to the latter, quite a few growers throughout the state report their stock as "off crop," and a scarcity of good carnations seems almost imminent.

Mr. Wm. E. Chappell, the Branch avenue florist, seems to have a decided predilection for branching out in various other avenues in the way of growing novelties. Among his carnations I noticed some excellent seedlings averaging two and one-half and three inches in diameter, while a batch of pansies in one of the houses evoked my especial admiration. Among these I saw some specimens averaging three and one-half and four inches—actual measurement.

Mr. Chappell is, perhaps, the only florist in this section who grows such stock as genista and erica in quantity. Though not novelties, he nevertheless finds a ready and easy increasing demand for these plants. They are certainly fine and well grown.

I will remark in passing that Mr. Chappell has equipped his house with the best and latest modern improvements and his plant ranks with the best within and around the city of Providence.

Mr. T. O'Connor will soon commence removing his extensive greenhouse plant from Hope and Thayer streets to Blackstone boulevard. The land on the new site is being cleared at present and the erection of the houses will speedily follow. It goes without saying that the houses will be put up in a way to insure the best results.

Mr. I. Hazzard intends building a barn upon the site of the greenhouse which was recently destroyed by fire.

Thos. Curley has made extensive improvements about his greenhouses and has enlarged his office.

W. S. Dimond, of Barrington, will add another carnation house to his plant, and P. P. Barker, of Warren, will put up a new violet house about 100 feet long.

Syracuse, N. Y.

The lecture given by Mr. Grove P. Rawson on the "Philosophy of Vegetation," was a great success; in spite of the worst storm of the season the large room was well filled and everyone was delighted, for Mr. Rawson has a delightful way of talking, besides being a thorough master of his subject. He illustrated his lecture by diagrams and natural flowers, all of which were fine examples. The lecture lasted for an hour and a half, everyone felt sorry it was ended, so well did Mr. Rawson hold the attention and interest of the audience. So far the society has gained 20 members. It is to be hoped that we shall in the near future have another visit from Mr. Rawson. Mr. D. Campbell, Supt. for Major Davis, decorated the room beautifully and showed some very fine plants of cinerarias, lilies and other spring flowers.

Arrangements are being made to give a free object lesson in the sowing of seeds and potting plants, which is much needed amongst many of our lady flower lovers. The necessity for a little more education in potting plants is best illustrated by the following: On one our coldest days a few weeks since I was sent for by a lady to pot a palm, which needed it badly, and as I preferred doing it in her own house I had everything ready when she stopped me with the remark, "Wait a minute Mr. Y., till I fetch you a knife," with surprise I asked what for. "Why to cut it out of the pot, of course."

The long continued spell of dull cold weather will seriously affect Easter flowers, for which there is likely to be a very large demand, as a sharp thaw has set in, and in a few days the snow will have left us, I trust for good this year.
